The elucidation of this question, we have regarded with special interest. It will be remembered that in September, 1932 we were among the few to point out that the signs of improvement, which were noticeable recovery of trade and that businessmen should not allow themselves to be misled by the too enthusaistic accounts that were appearing in some sections of the Press here and abroad. And when towards the end of 1933, a similar phenomenon reappeared we found ourselves in a position to assure the business world that this time it was more trustworthy but that its significance and implications should be carefully understood. For in the present position of national and world economy, it is of immense importance that signs of improvement in foreign trade should not lead us to assume too easily that by some wave of the magic wand we have lived down the years of the depression and that we have been mysteriously transported to the palmy days of international trade. When the *World Economic Survey* of the League of Nations was published in November, 1933, we posed the very important problem of determining whether the recovery, which may be said to have begun in the autumn of 1932 and continued, with a recession in the spring, up to the present, was a general world recovery or whether it was a mere aggregate of separate national recoveries due to local causes and local efforts. Though we felt instinctively and on the basis of a general *a priori* reasoning that it was not a general world recovery, no attempt to examine the question minutely was then possible. Mr. Condliffe himself, the author of the *Survey*, found himself unable to give a lead or to present the facts in a manner which would lead itself to such an enquiry. It may be useful to recall here the remarks we made in our review of the *Survey* in *Indian Finance* of October 28 last:

> We would prefer to see Mr. Condliffe treat the material at his command from two different standpoints: (1) economic readjustment calculated to help the resumption of traditional international trade relations; and (2) economic readjustment such as would make conditions in each country more helpful to planning without a too serious break from individualism.
>
> This Mr. Condliffe has not done, and possibly could not, as his view of the present nature and position of world economy would not admit of the separation of the national, from the international, standpoint presupposed in such criticism. "It is essential," Mr. Condliffe urges, "to realise that the real form which modern economic organisation has taken is neither that of a series of isolated national units nor that of a single economic world unit, but that of a series of partly closed, partly interdependent, national economics linked in shifting equilibrium to the changes in which are expressed by alterations in the rates at which the respective national currencies are exchanged. . . . The realistic consideration of economic problems is possible, therefore, only in this setting of national interdependence as distinct from either national economic independence or cosmopolitan dreams of world polity. . . . Nor is it possible to separate national from international equilibrium."

* * *

The publication of the League of Nation's *Bulletin of Statistics* for January, 1934 affords the first ray of light into what was till now an impenetrably dark, but nevertheless, inviting field of enquiry. For the Economic Intelligence Service calculated the total of world trade in terms of gold dollars. The imports and exports of 73 countries accounting for 97 per cent. of the total world trade are recalculated in this way and indices of world trade are furnished as in the following table:

Indices of World Trade
By average monthly values in gold dollars
Average 1929—100

		1929	1930	1931	1932	1933
January	...	103.5	93.4	63.2	41.5	34.7
February	...	98.1	84.8	59.2	41.5	33.1
March	...	100.4	89.2	65.1	42.8	36.8
April	...	103.7	83.8	61.4	41.9	32.5
May	...	101.3	84.8	60.2	39.1	34.8
June	...	96.7	78.6	58.3	38.4	34.2
July	...	97.9	76.4	57.6	34.3	34.2
August	...	98.8	74.4	54.9	34.6	34.7
September	...	98.1	76.4	54.8	36.4	35.1
October	...	106.4	81.3	55.0	39.3	36.8
November	...	101.6	73.3	52.1	38.4	36.6
December	...	98.6	73.7	50.3	39.3	...
Average	...	100	80.8	57.7	39.0	34.9*

*Eleven months.

In appraising these figures, one should, of course, bear in mind the complexities involved during a period of changes in currencies and exchanges, of partial devaluation, and various expedients adopted by countries to expand their exports. It is clearly beyond the capacity of outsiders to acquaint themselves with the methods of computation and, much more to detect the sources of inaccuracy. But the tale of world trade told in these figures confirms the general experience; and it is not unreasonable to presume that the authors of this production, who are eminent economists and statisticians, have taken every possible care to ensure the correctness of their calculations.

* * *

It will be seen from the table that the facile extension of the phenomenon of recovery to the sphere of world trade, has not as much warrant in the figures of world trade as one would expect. Much of the improvement on which we have set our hopes of a world-wide revival is of a seasonal kind. Except 1931, in each of the years for which indices of world trade are furnished there is a seasonal improvement in autumn. And it is significant that even in 1930, a year in which the depression had by all tokens progressed with giant steps, the figure went up from 74.4 in August to 81.3 in October. The months of March and April also bear witness to a similarly better record as compared with the months immediately before and after. Most notable of all is the fact that the period of unbroken decline in the indices extends from March, 1930 to July, 1932; and the two exceptions of October, 1931 and March, 1932 may be dismissed as of no importance except to confirm the earlier generalisation that October and March invariably show an increase in world trade over the immediately preceding month. If the period of unbroken decline may be regarded as the trough of the depression there is warrant for the assumption that world trade has begun to scramble up the hill. And the indices of world trade from August, 1932 up to the present time acquire a new significance. It is important to note that while the fluctuations in this period was within the range of 39.3 and 32.5, in the corresponding period immediately precedent thereto the range was as much as between 55 and 36.3. August, 1933 has the distinction of recording a figure which is definitely above that of the corresponding month of the previous year.

From all this it may be said that the rot has been arrested. But if allowance is made for the seasonal element in the recent improvement, it would be open to us only to conclude that no appreciable increase in world trade has materialised and that what has happened is but a stabilisation of world trade at little over the lowest levels reached in the depression. The *Economist* in a careful enquiry into this question in its issue of January 27, has come to this conclusion. And arguing apart from these figures and on the basis of a general understanding of the position, there is no reason to expect an expansion in world trade; and we can do no better in this context than to recall our remarks on this question in our issue of December 9:

> "All the more important diagnoses of the ills of the world trade during the last three years suggested clearly that we might rule out the chances of a merely automatic recovery. Whether we view the depression as having been brought about by the inflated value of gold, or the maladjustment between production and consumption, or the catching up of world trade in a

> tangled network of tariffs and barriers, we are not yet in a position to claim that the cause of dislocation has ceased to operate. . . . Only in the monetary sphere can one record any considerable improvement."

* * *

In its issue of January 27, the *Economist* makes the following observations:

> "It is, indeed difficult to imagine how any considerable increase in the quantum of trade can have taken place in face of heightened rather than lowered trade restrictions. Tariffs, quotas, clearing agreements, blocked accounts and exchange uncertainties have been augmented over a wide area, even if there have been some mitigations in special cases. . . The different national economies are more likely to be stabilised at the very trough of world depression."

* * *

But the differences between the *Economist* and ourselves lies in the fact that while the *Economist* sees in this the reason for abandonment of economic nationalism, we believe that the revival, such as it is, is a confirmation of the impossibility of regaining international trade in its old form and the expediency, if not the wisdom—which also, we urge—of developing the national economic recoveries into a stable world prosperity.

* * *

So far as India is concerned, we cannot help thinking that the fall in December foreign trade, not only as compared with November but also as compared with December, 1932 is a somewhat sharp reminder of the unwisdom of tacking our economic fortunes too closely with foreign countries. For one thing, the import trade has persistently failed to participate in the upward movement and has been lagging far behind. And, though the maxim, that "you cannot sell unless you buy," has less terrors for us than for, say, Great Britain, we must be prepared to ensure ourselves a greater freedom from foreign markets that we can at present claim. The stimulation of internal production can do far more to raise our standards of living than the revival of the palmy days of international trade.

SOCIAL ENDS AND POLITICAL THEORIES

Never since the Ancient Greeks first thought of constituting the relations of Man in Society into a separate body of knowledge was political thought in a worse chaos than now. And the reason is simple. At every earlier period, unlike the present times, the objectives of social endeavour had some degree of clarity and general acceptance, sufficient to admit of a reasonable discussion of means and ends. It is often said in textbooks of political science that the definition of the State is the end, rather than the beginning of politics. The fact is that one begins with a general idea, however hazy, of what a state is and admits that the purpose of political enquiry is to draw more clearly the outlines of the concept of the State and fill in the details. This involves necessarily the idea of the purpose of the State; and it will, we think, be generally admitted that the leading ideas of political science have swayed largely with the prevalent social ideology in each period.

* * *

The Ancient Greaks had a working idea of individual excellence of every free citizen which, they believed, it should be the aim of the paramount social organisation to promote. From this flowed all the distinctive features of Greak Polity, the freedom of the citizen ensured by a democratic system of Government, his mental and physical development, through the pursuit of letters, art and sports, a vigorous exercise of political rights in a State, with the dimensions of a city, and, last but not least, the support of a body of essentially aristocratic citizens by a far larger body of helots and slaves. The Romans had their ideal of a world kept in order by the law and might of Rome; and it is not a little significant that in such political thought as Rome has handed down to us, the might of law is a far more prominent notion than the right of the citizen. It is not our purpose to sketch the whole of the parallel course of political thought and political history. But the same tendency to translate the social needs of the period into a permanent political theory was manifest throughout the Middle Ages, after which one probably expects a greater degree of universality in political thought. If it is true that the term "Holy Roman Enpire" sums up the social ideology of the time, then it will be realised that it was just a crude mixture of the Roman idea of a universal Empire with Christian theocracy; for there was equally a felt need for the Prefect and the Priest.

* *

The maxim "Render unto God the things that are God's and Render unto Cæsar the things that

are Cæsar's" was devised to solve the apparent conflict between the political and the religious hegemonies. All the rivalries of the Pope and the Empire, with which the history of the Middle Ages is full, did not suffice to weaken the faith of men in the possibility of this dual control over men's mind and body.

* * *

The logic of events relentlessly swept aside this federalism of Church and State ; and the result was the constitution of the autonomous nation. Again, the conditions of the time pointed to the need for the imposition of restraints on absolute monarchy ; and the eighteenth century, which was the most formative period in the history of political thought since the days of Plato and Aristotle, saw the development of the philosophy, that provided political democracy with at once its claim and its excuse.

* * *

It is tempting to speculate on the probable course of political thought, if democracy, so soon after its adoption on a scale which was unthinkable for the Greeks and which nonetheless is the only one possible, were not merged in the idea of nationalism. It is even more fascinating, and *protanto* more exacting, to speculate on the basis that capitalism and imperialism did not emerge at the time they did. But the fact is that the political ideology of the Greeks, namely, of a state functioning in the interests of social culture and individual excellence has never had a chance of revival. And the idea that has prevailed is that of the Romans, the idea of a State, aspiring to be a world State, training, drilling and lashing its citizens into a predatory fighting force, imposing its laws relentlessly on those within its boundaries, and threatening the imposition of similar, and oftentimes dissimilar, laws on those outside, caring for no more than just that kind and intensity of loyalty necessary for order within and aggression without.

* * *

Thus Democracy, which began among the Greeks as a condition indispensable to the development of individual culture, has, during its so-called palmy days, been first an expedient, and then an efficient instrument of aggressive nationalism run in the interests of a class. By the same token, was Parliamentary Government accepted as the best, indeed, the only form which democracy can take. For did it not help the most imperialistic of modern nations to the heights of power and wealth, unknown to the world, till the United States developed in full the virginal resources of a whole Continent?

Every political system and every system of political thought come to their natural end, as soon as the conditions in which they were possible cease. Greak polity broke down because of the sheer impossibility of the City states to hold their own. *Pax Romana* was overwhelmed by the forces of chaos. The Holy Roman Empire succumbed to logical necessity. And now the parliamentary democracy of aggressive national imperialism,—which is parliamentary more than democratic—is caught up in meshes of its own creation.

* * *

Within every country the masses have learned to exercise their power to demand and actively to try to secure an increasing share of the benefits of modern economy. With Governments still tied to the outworn theories of *laissez faire* in economic matters, with the ruling classes so keenly interested in the preservation of the system of capitalistic individualism, the practical domestic problems are becoming increasingly complicated and difficult of solution. Abroad, the competition of a number of autonomous states seeking to aggrandise themselves has resulted in a situation, in which international political and economic relations have come to a stalemate, without the facility of either starting the game afresh or leaving the pieces on the board to themselves. We have read in history of monarchs who successfully sought an escape from domestic embarrassments by leading their subjects against an "historic enemy" ; and possibly there were some who appeased indignation at defeat with liberal reforms or concessions at home. No such alternative is open to a modern government. For the two things that the electorate insists on are disarmament and economic recovery, and a modern government is powerless to achieve either.

* * *

We are thus in one of those dark ages in the history of political evolution, when the old ideas have lost their appeal, and the institutions, which functioned smoothly and efficiently and commanded the allegiance of the majority, are falling into disrepute. To understand the change, one must remember that the capacity of a political system to answer the needs of society is as much the condition of its continuance, as the cause of its inception. After that vast mental and moral shake-up, which we call the French Revolution, the people in each country became aware of an identity among themselves and a distinction from others and wanted to be energised as a people. This meant that there should be a system of government which, while freeing them from the tyrannies of the past, would still assure them of wise and effective, if not altogether disinterested, leadership from the experienced classes above. Parliamentary democracy answered this purpose ; under it, mankind has taken the biggest strides on the path of progress. And now it is confronted with problems which it is unfitted to solve. It is too easily assumed that the fault lies with democracy and that the solution of present problem is to be found in devising a form of government different from parliamentary democracy as we have known it during the last one century and a half. But democracy is not so much a form of government as an essential principle of social relationship ; and as such it is not subject to arbitrary changes. What is required is a change in the form and substance of government to suit the needs of the time. We have to dive down to fundamentals and clarify the objectives of social endeavour to get at any adequate theory of the State or of politics. One thing is certain ; a class-ridden Cabinet can no more bring about economic or political stability than the City State could have ensured its freedom against the might of Macedon, or the Holy Roman Empire survived the onslaught of the Renaissance and of Nationalism.

PROSPECTS OF RUBBER RESTRICTION

Considerable interest has been aroused in Mincing Lane rubber market about reports and rumours regarding an impending restriction scheme ; and much prominence has been given to these reports in the London papers that arrived here by the last two Air Mails. It is but common knowledge that the first efforts at restriction made by the Dutch interests in March 1932 ended in failure. A second attempt was made last April but nothing came out of that; but since then negotiations have been going on secretly. And now during the last two Air Mail weeks the London market is daily supplied with some report or other, mostly uninformative and supposed to emanate from Amsterdam regarding the restriction talks going on there. At one time, news reached from Batavia that a tentative scheme agreeable to both British and Dutch interests had been drawn up, as a result of the talks of the Imperial Association for Rubber and other cultivations in the Netherland Indies. This had the effect of letting loose the forces of speculation and raising up prices. The market witnessed such an outburst of violent

activity, short of a boom, that the prices touched 4 19/32d., the highest since August, 1930. The report also pointed out that the scheme, estimating the present output of Ceylon, Malaya and Dutch East Indies, aimed at a 50 per cent. quota for the 1st year.

But the British press and British rubber interests have betimes bestirred themselves to give timely warning against giving too much credence to unofficial reports and hasty operations based thereon. Emphasis is laid, in the first place, on the difficulty of evolving a scheme agreeable to both British and Dutch interests. No scheme, which does not provide for the control of the Native planters, who have been encouraged by the Dutch, will be acceptable to Britain. This is the rock on which past attempts have been wrecked. There is also the difficulty of bringing within the scheme small producers like Siam and French Indo-China. The Dutch Rubber Association has for the last several months applied itself to the solution of the several difficulties attendant on the formation of a plan of restriction. Their plan of campaign would appear to have been (1) assuring themselves of the willingness of growers in other countries to participate in a scheme of restriction, (2) discussing the principles of the plan with these countries; (3) educating the Dutch Natives about the value of restriction no less to themselves than to other rubber interests and (4) asking the D.E.I. Civil Service to formulate a scheme by which the Natives could be brought within its scope. Those who advise caution and reserve against the report point to the difficulty of the Dutch in finding solutions on all the points enumerated above. Secondly, the British and Dutch Governments have not been informed in this matter who, it is understood, favour a five-year restriction plan. At any rate, even if such a scheme has been made ready, it will be only by about April 1st that the scheme will become operative.

As has been said already, the reports so far available are hardly informative. As against the Batavia report mentioned above, there are others which favour a 2/3 curtailment instead of a 50 per cent. with a pivotal price of 6d. But whatever the provisions of the plan, it is a matter for consideration whether at the present stage, a restriction scheme is advisable and useful. In the first place, it is not unreasonable to believe that world conditions are improving and that, as a result the swollen rubber stocks will come down, even without any plan of restriction. According to Messrs. Henry Gardner & Co., world rubber stocks are slightly less at the end of 1933 than a year ago. As against 611,761 tons at the end of December, 1932, they are 608,373 tons at the end of December, 1933. Secondly, America, which is the largest consumer of rubber, already shows signs of an improved offtake and may continue to do so with improvement in business conditions. According to Messrs. Symington and Wilson, America absorbed in December 29,087 tons compared with 29,162 tons in November. It is claimed that the December figure is extremely satisfactory, considering that December normally shows a decline in American rubber absorption. In the same month of 1932, absorption was less than 17,000 tons. U.S. consumption for the whole of 1933 amounted to 405,687 tons compared with a revised figure of 332,000 tons for the preceding year. Thirdly, prices of commodities have been rising for some time past, thanks to the various measures of President Roosevelt and the general confidence in market circles, and may continue to do so in the future. The price of rubber touched in *Air Mail* week 4 19/32d. on the strength of rumours of the imminence of the restriction scheme. Rubber is the only commodity, barring wool, which in the present recovery has shown a very marked increase.

The talk of restriction has roused producers to a sense of the danger involved as regards their interests. There is one class which believes that the present output at the current price would be more profitable than a 50 per cent. crop at 6d., as contemplated in the restriction. These arguments notwithstanding, there is widespread belief that this time a practical scheme of restriction is almost a certainty and the only doubt is as regards the time of adoption.

INDIGNATION AGAINST 18d.

Sir Montagu Webb writes from Karachi:—

"I am glad to see that I am in practical agreement with Mr. M. L. Doherty, and he with me, on the subject of the advantages (and drawbacks) of silver as currency, and on the advantages (and risks) of a paper monetary system managed by tne State, or some agency acting for the State. I think I have been writing on the subject of money, and using and studying it on the spot in all five Continents, as long as, or perhaps longer than, Mr. Arthur Kitson. I opposed the closing of the Indian Mints to the free coinage of silver, and the consequent de-valuation of the people's savings, in India and in China, as far back as 1892. I have read and greatly admire Mr. Kitson's writings, but I do not propose to split words with him as to when money is not money; or whether money becomes a commodity when it is stored, or held in the form of what are, in effect, Silver Saving Certificates; or whether a purchase by means of a silver Saving Certificate is "barter"; and so on. Money is as money does, as the great American economist Professor Francis Walker used to say; and that's the truth in a nut-shell

"Let me conculde by agreeing that I, too, have no desire to put any artificial limit on the currency by pegging it in any way to one or two precious metals so that it cannot expand sufficiently readily to prevent a shrinkage of prices such as that by which we have been paralysed during the last five years.

"I have now finished my first tour around India in the interests of monetary reform. I found everywhere great indignation among well informed Indians and Europeans—especially producers as distinct from middlemen traders,—at the continued maintenance by Government of 1s. 6d. rupee. And I found several stout champions of Re-opened Silver Mints in Calcutta, which is very encouraging."

Jamshedpur.

Those of us who have been toiling, day in and day out, in *Indian Finance* office can scarcely realise that what has always seemed to us the child of yesterday is already six years old. Nor can the public outside, who have become accustomed to look to this journal for apt and authoritative interpretation of contemporary events in the financial world, easily believe that *Indian Finance* is only six years old.

* * *

As I was preparing ahead for the Anniversary Number, writing for messages, editing them when they arrived, and fixing up the other features connected with annual reviews of markets, I was too engrossed in the work to feel the full thrill of the thought that begun as a hobby, *Indian Finance* has come to be a whole-time job. However, as the Anniversary Number reached me here in Jamshedpur, while I sat in the morning sun, sipping delicious tea, it set me athinking; I found myself in an introspective and retrospective mood. The stir and stress of Calcutta left me scarcely any time for self-communion. But I find this environment congenial, and this occasion apt, for a calm and careful analysis of what I set out to do when I started this humble enterprise, and what I have achieved and, sobering thought!, failed to achieve.

* * *

Half-contemplative, half-serious, I have been turning over the pages of the annual number. The message that vividly revived the memory of the early years is that of Mr. S. Sadanand, whose experience of journalism as a business has not been unlike mine. "When the journal started seven years ago, it had, in spite of its name, no finance"—observes the founder of the Free Press which, despite its name, could not be free—so often has it been fettered, persecuted, fined and harried. Nor had Sadanand finance. Free Press has progressed in a heady fashion—it has advanced on all fronts. Three dailies in Bombay (English, Guzarati and Marathi); two more already inaugurated in Madras and Calcutta; and a few more promised in such centres as Delhi, Lahore and Lucknow. Sadanand's fervent idea coined the money for the enterprise. And when I look back on the travails and ordeals of the past six years, I believe that the finance for the conduct of *Indian Finance* must likewise have had its origin in the fervour of the idea.

* * *

For, to tell you the truth, I am yet to see finance except as an idea. Tangible finance in the form of abundant crisp notes or bulging bank balances appears as far off as ever. So much so that a powerful magnate of Clive Street twitted me, the other day, for my finances not being well off, in order that he might do aught to place them on a better basis. No! I humbly thank you and beg to prefer my own way of stabilising and strengthening the finance of *Indian Finance* and of myself. *Indian Finance* will be well off, and I will be well off, when each day brings in twenty-four cheques of twenty-four rupees from ardent and appreciative readers. And that is the only way by which I would seek or like to be well off. Each cheque of twenty-four rupees—much more so, each cheque of twelve rupees from the "concession" subscribers—has given me greater pleasure and vaster pride than the cheques for five-figure amounts which I have received for underwriting work in my Bombay days of business life.

This brings me to my point. Whether or not we on the staff of this journal have succeeded in educating our readers, our own task has been a process of compulsory education for us. Whether or not we have pleased, amused and edified our readers by what we write, we have ourselves enjoyed writing and derived from it all the happiness and zest and fun which one may need to make humdrum life worth living. Whether or not our finance has been satisfactory, we have been the recipient of that measure of supreme approbation from men of discrimination and judgment, that it has been far more satisfying than the owning of a very treasure-house. As, each Saturday, the issue of *Indian Finance* is placed in our hands, two of the happiest men in the Indian Empire are Srinivas and myself. A task that gives this surpassing happiness once a week is not to be reckoned in terms of income or profit. We are profoundly grateful for the Providential diversion of our activity to a work and a mission which has elicited approbation from one and all and which has, likewise, induced and strengthened self-approbation in us. We have no other heart's desire nor other ambition than to continue to have, and deserve, this two-fold blessing.

Yes. There is another who shares in this blessing. And that is, the art-printer and *Indian Finance*—printer, Naren Mukherjee. He has a three-fold blessing. For, we bless him with all our heart for the apt and timely aid—I was almost going to say, succour—which he has ever given us.

You deem to-day's Gossip too personal. What is Gossip worth if it is not personal? And what is the worth of Gossip in relation to birthday ebullitions if it is not too personal?

OLYMPUS

(From Our Correspondent)

New Delhi, Feb. 7.

A wave of 'protection' is passing over the Imperial Capital. Protection for the Princes, protection for Lancashire, protection for Bombay, protection for the handloom industry, protection for the sericulture industry and protection for Sir George Schuster's revenue and protection against the lazy members.

* * *

All which means that the Assembly members will have a chance of exploiting the issues for prolonged debates. Quite a number of elected Members openly profess in the lobby that they must create a good impression in their constituencies as the new elections are coming next October.

* * *

But a quarrel has already started over the matter of dilatory tactics of the Opposition. Mr. F. E. James of the European group has written a most angry article in *Roy's Weekly* taking his colleagues to task for being lazy. His criticism is telling and his argument effective. But there is a serious flaw in it.

* * *

The cudgels have been taken up by the Secretary of the European Group, which consists of Members who have all risen to the top, in their line, and who are paid Rs. 25,000 annually by the European residents to perform the Secretariat work for them. Their interests are limited and they are protected by Government even before the Europeans speak about them. What is more, they seek assistance and help from Government, and often inspiration too, which is readily given. Their case, therefore, is not on all fours with that of the ordinary elected Indian member of the Assembly.

* * *

However, the charge has been made and will continue to echo in the lobby till some solution is found, sitting longer hours to expedite business. The President feels that some improvement is called for; the Government is keen because they have already in hand a scheme putting members on a salary basis—to prevent their prolonging the session!

* * *

The Assembly Departments staff too is in favour of a change. Dr. Ziauddin Ahmed has been converted by them but Mr. S. C. Mitra refuses to change his views. So that it will not be plain sailing for the pro-changers.

* * *

The Princes Protection Bill is producing an unexpected result. Far from there being an unqualified opposition to the Bill it has given occasion for sensational allegations. Lobby circles have been talking of a journalist who advertized to publish a book on Kashmere, and the book never appeared. Mr. Sarma has already attacked the "indecent journalists' who have necessitated thus a legislation. Captain Lalchand, ex-Chief Minister of Bharatpur, gave the Assembly a shock by announcing that Delhi is the headquarter of the Blackmailers, and that they exchange notes in their den and that recently a Prince got out of their clutches by threatening to stop his donation to a University!

* * *

Why all this should be indulged in on an occasion which calls for genuine attempt to criticise the Bill to safeguard the freedom of the press, is not understood by those who are not initiated into the mysteries of the lobby politics.

* * *

As regards the textile and silk questions Sir Joseph Bhore has succeeded in overwhelming the House with a literature which it will take Members, longer to digest, than it will take the Assembly to pass the Bill!

* * *

Sir Pestonji Ginwala is here and he could do for the Members what Mr. C. S. Rangaswami did during the Reserve Bank debate. In fact when Sir Pestonji appeared in the Distinguished Visitors Gallery and came into the lobby some Members took the opportunity of seeking advice from him.

* * *

Sir Pestonji feels the position is delicate. He does not wish to speak about the respective merits of the Tariff Board's report and the Government of India's decision thereon. It would not look nice for him to state where Government had gone over the head of the Board and where the Board might have acted differently. All that would not come nicely from an ex-President of the Board.

* * *

And what is more, the Members are puzzled as to how the Mody-Lees Pact has come to be recognized, as if it was done on behalf of India. Perhaps, it is not known fully to the Members that in all that Mr. Mody did he had his confidential instructions and that he did not act in any way without the knowledge (I will not say, approval) of Sir Joseph Bhore.

* * *

I cannot help reproducing a most remarkable reply of Sir Frank Noyce to another uninteresting and desultory debate on unemployment. Said Sir Frank "It is difficult to guarantee a state of comfortable existence to every one, so long as every one has a right to produce children irrespective of his capacity to support them" After that the Member for Industries and Labour did not worry whether Mr. Joshi's resolution was passed or defeated!

SOUTH INDIA

(From Our Correspondent)

Madras, February 7.

To revert to the old question of the remission of land revenue may seem at first sight but another instance of the proneness of a regular correspondent to take hold of the handiest topic of the week. But the debate in the Council on this question has very much more than a purely financial or economic interest. The discussions reveal the widest variety of views ever aired in our provincial legislature. Of course, it is only to be expected that each member spoke with an eye on his constituency. But there was at one end, Sir A. P. Patro, who flatly denied all claim to remission of land revenue and at the other, were scores of members demanding special treatment for various classes of cultivators and fighting primarily against the distinction sought to be made between dry and wet lands. In between was Mr. Langley, unable to join either side, but with too real a sense of the gravity of the economic situation in Madras to be able to recommend any cut and dry measures.

The *Madras Mail* has reserved its praise for Sir A. P. Patro whom it extols for courage to txpound unpopular views. But the public knows only too well that unpopularity is just the soil on which Sir A. P. Patro's crops have ever thriven. And it would have been more truthful if the *Mail* had recognised the courage that is required for speaking palpable absurdities in a council chamber. Sir Parasuram's line of argument is very simple:

> On account of the economic depression the prices of commodities had fallen. Was it fair to ask the Government to give up a third of the province's revenue and yet run the administration on proper lines for the benefit of the people? How would it be possible to forego that revenue and yet maintain the efficiency of the administration? Money was invested in several ways by capitalists, money-lenders and lawyers, and not by the cultivators. Money was also invested in rubber tea and coffee plantations, which had also been hit hard. The bank rates had been reduced to 2 per cent.,and investors had suffered by that reduction.
>
> The whole question, he said, should be considered, not from the sentimental view point of electors.

For sheer confusion about the relation between agriculture and industry, money and investment, taxation and administration, this utterance of Sir Patro's is indeed hard to beat. In the exuberance of his love for Government Sir Parasuram perhaps, believes that all wealth flows from the activities of the Government and its secretariat. How else could one explain the needs of the government being presented in direct opposition to claims based on the state of the country's staple industries? If a ludicrous presentation of a case can strengthen the adversary, Sir A. P. Patro was out and out the most effective speaker on the side of the opposition.

It is a relief to turn to the speech of Mr. Langley, who is perhaps the only member in the Council who is not obsessed either by the Government's needs for revenue, on the one hand, or the imperative necessity for remission on the other and whose mind is turned to the probable developments of the future, such as call for immediate action on the part of the people and Government alike. After pressing the claims of Malabar for a higher remission than 12½ per cent., on the ground that, if it was justifiable to reduce the assessment by 12½ per cent. last year some larger remission is justifiable now, he turned to consider the crisis that was fast developing in the position of agriculture in South India. He said that, when he read the Government *communique* it seemed to him that "the one sad thing about it was that it suggested that the ryotwari system in this Presidency has entirely broken down". He likened the position of the Government to that of the United States whose debtors were called upon to pay their obligations in a commodity which they simply could not produce. For Mr. Langley urges that paddy is definitely unsaleable and that a position will soon arise when South India will probably have to burn its paddy as Brazil burnt its coffee. It might look like giving free reins to one's imagination. But the fact is that even at the record low prices now ruling buyers of paddy are few and far between; the markets to which South India formerly exported its rice have either started growing their own rice crops or have been won over by foreign competitors. The reduction of railway freight has afforded some relief to Tanjore but the other districts find it as difficult as ever to dispose of their harvests. Mr. Langley suggested, more in despair than in hope, that a great deal could be done by the Agricultural Department being encouraged to persuade the ryots to grow other crops than paddy, obviously sugar cane. To what extent the present area under rice can be diverted to the growth of sugar cane is a matter on which no one can give an opinion off-hand. But it is certain that, if the Government want to realise their revenue in cash and not in kind, as suggested by one of the members in his amendment, there should be a judicious admixture of money with the present food crop. Whatever might be done, Mr. Langley's outspoken utterance entitles him to the grateful recognition of people our.

The bill providing for the abolition of taluk boards and effecting a few administrative changes incidental thereto has been referred by the Council to a Select Committee with no more ado than is inevitable in any representative Assembly. It is true there were a few amendments, some of them calculated to delay the process of this legislation, others making a few suggestions in matters of detail. But, on the whole, the Government experienced little difficulty at this stage of the legislation. The conditions which call for such action on the part of the Government and the reform which they intend to carry through were detailed in these columns nearly a month ago. And so was the demand that, while the organisation of local administration is taken on hand, Government should act with the greatest circumspection and provide such impetus to the development of local panchayats as it is now in their power to give. So far as the abolition of taluk boards is concerned, no tears were shed in the House, though there were a few who suggested that taluk boards have been heedlessly multiplied and much of their present insolvency was due to the actions of the Government themselves. But the real point of the opposition was that the Bill contained no provision for the development of a free and self-reliant village community organised in a panchayat and that in the matter of the district board no reforms calculated to ensure an efficient executive in the districts have been outlined.

The problem of local administration is best viewed from two standpoints. On the one hand, it is necessary to develop free village panchayats with a healthy sense of civic responsibility and self-reliance and that, on the other, each district has to be assured of competent direction from the centre and reliable advice in matters technical from proved experts in the line. The improvement of the means of communication in local areas has simplified the problem in its latter aspect. And it is in respect of the former that the Bill shows itself to be dangerously deficient. The speakers on the Opposition side made a very sensible and just plea that this measure should not be carried through by Government solely on the strength of their party in the council, but that, in as much as all the parties are agreed on the main principles, it should be a non-party measure getting the full benefit of the cooperation and consideration of all sections of the House. As in most other instances, this measure was rushed through and it looks as though a rationalisation of our local administration is yet far off.

Indian Finance

MONTHLY REVIEW OF TRADE AND FINANCE

DECEMBER 1933.

The trade returns of British India for the month of December, 1933, as compared with the preceding month, showed decreases in the value of imports, exports and re-exports. The value of imports of private merchandise totalled R. 9,18 lakhs, a decrease of R. 82 lakhs as compared with the preceding month. The exports of Indian produce and manufactures fell by R. 1,28 lakhs from R. 12,85 lakhs in November, 1933, to R. 11,57 lakhs in the month under report. Re-exports also recorded a decrease of R. 6 lakhs and amounted to R. 29 lakhs.

STATISTICAL DATA FOR DECEMBER, 1933

	Dec. 1933	Nov. 1933	Dec. 1932
FOREIGN AND SEABORNE TRADE :—

*Weekly Average Returns.

Treasure on private account, including currency notes, showed a net export of R. 2,27 lakhs in December, 1933 as against R. 2,41 lakhs in the preceding month and R. 9,94 lakhs in December, 1932.

Measured by the statistics of merchandise and treasure, the total visible balance of trade in December, 1933 was R. 5,05 lakhs in favour of India as compared with R. 5,64 lakhs in November, 1933 and R. 12,66 lakhs in December, 1932. During the nine months ending December, 1933 the visible balance of trade in merchandise and treasure was R. 61,46 lakhs in favour of India compared with R. 47,75 lakhs in the corresponding period of the preceding year. The balance of remittances of funds in December, 1933 was *minus* R. 1,93 lakhs and in nine months April to December, 1933 *minus* R. 29,15 lakhs.

As compared with December, 1932, the imports of food, drink and tobacco in December, 1933 decreased by R. 19 lakhs to R. 1,22 lakhs and imports of manufactured articles by R. 57 lakhs to R. 6,48 lakhs, while those of raw materials rose by R. 30 lakhs to R. 1,24 lakhs. Under food, drink and tobacco, imports of sugar 16 D.S. and above (including beet) declined from 32,000 tons valued at R. 36 lakhs to 30,000 tons valued at R. 30½ lakhs. Imports of raw tobacco recorded a decline from 558,000 lbs. (R. 7 lakhs) to 148,000 lbs. (R. 1 lakh). Imports of salt declined by 32,000 tons in quantity and by R. 4½ lakhs in value. Under provisions and oilman's stores there was a decrease of R. 2 lakhs due chiefly to lesser arrivals of canned and bottled provisions. Arrivals of tea amounted to 328,000 lbs. (R. 2 lakhs) as compared with 725,000 lbs. (R. 4 lakhs). Under raw materials, the imports of kerosene oil rose by 3 million gals. in quantity and by R. 11 lakhs in value. Imports of mineral oils other than kerosene also improved by 4 million gals. in quantity and by R. 7 lakhs in value to 14 million gals. valued at R. 36 lakhs. Imports of coconut oil declined by 330,000 gals. in quantity and by R. 5 lakhs in value. Raw cotton (chiefly imported from Kenya Colony, Tanganyika Territory, Egypt and the United States of America) recorded an increase of 1,200 tons in quantity and of R. 8½ lakhs in value. Imports of raw silk rose by 215,000 lbs. in quantity and by R. 6 lakhs in value. Imports of oilseeds recorded an improvement of 2,000 tons in quantity and of R. 3 lakhs in value. Under manufactured articles imports of cotton yarn and manufactures decreased by R. 70 lakhs. The imports of twist and yarn fell from 3.4 million lbs. to 1.7 million lbs. in quantity and from R. 27 lakhs to R. 15 lakhs in value. Under cotton piecegoods, imports of grey goods fell from 30 million yards valued at R. 40 lakhs to 9 million yards valued at R. 13 lakhs and those of white and coloured goods from 28 and 24 million yards valued at R. 47½ lakhs and R. 45½ lakhs to 16 and 15 million yards valued at R. 31 lakhs and R. 32 lakhs respectively. Under iron and steel there was an improvement of R. 11½ lakhs due mainly to an increase under sheets and plates and steel bars. Imports of machinery and millwork recorded an advance of R. 12 lakhs due mainly to larger arrivals of electrical machinery and sewing and knitting machines and parts thereof. The number of motor cars imported amounted to 1,028 and that of motor lorries, buses and vans to 387. The value of motor cars imported in December, 1933 amounted to R. 18 lakhs and that of motor lorries, buses and vans to R. 4 lakhs. There were noticeable decreases under piecegoods of cotton and artificial silk (−R. 9 lakhs), and silk manufactures (−R. 6 lakhs) while woollen blankets and rugs recorded an increase of R. 3 lakhs.

Compared with December, 1932, exports of food, drink and tobacco in December, 1933 rose by R. 3 lakhs to R. 2,96 lakhs. Shipments of rice, not in the husk, decreased in quantity from 109,000 tons to 74,000 tons and in value from R. 79 lakhs to R. 50 lakhs. The exports of tea dropped from 40 million lbs. to 34 million lbs. in quantity but the value thereof rose from R. 1,70 lakhs to R. 2,07 lakhs. Exports of coffee advanced from 4,000 cwts. (R. 3 lakhs) to 8,000 cwts. (R. 4 lakhs). Raw materials and produce exported declined by R. 21 lakhs to R. 5,24 lakhs. In this group raw cotton recorded a decrease of 350 tons in quantity and of R. 22 lakhs in value. Of the total shipments of 29,000 tons, China took 12,400 tons, Italy 4,300 tons, the United Kingdom 3,800, tons Germany 2,600 tons, France 1,700 tons, Belgium 1,500 tons, the Netherlands 800 tons, Spain 700 tons, Japan and the U.S.A. about 350 tons each, the remainder being despatched mainly to Poland and Greece. Consignments of raw jute remained practically unchanged at 82,000 tons in quantity but the value fell from R. 1,42 lakhs to R. 1,12 lakhs. Exports of lac improved by 30,000 cwts. to 69,000 cwts. in quantity and by R. 10 lakhs to R. 22 lakhs in value. Shipments of oilseeds rose from 77,000 tons valued at R. 1,18 lakhs to 108,000 tons valued at R. 1,25 lakhs. Shipments of linseed increased from 8,000 tons to 43,000 tons in quantity from 53,000 tons to 52,000 tons, the decrease in value being from R. 83 lakhs to R. 59 lakhs. Shipments of castor seed also declined from 8,000 tons valued at R. 11 lakhs to 3,000 tons valued at R. 4 lakhs. Despatches of raw wool advanced from 2.9 million lbs. valued at R. 10 lakhs to 3.3 million lbs. valued at R. 12 lakhs. Exports of raw hides and skins rose by 1,000 tons in quantity and by R. 6 lakhs in value. Exports of manganese ore advanced from 16,000 tons to 18,000 tons in quantity but the value declined from R. 4 lakhs to R. 3 lakhs. Despatches of raw rubber recorded an improvement of about R. 4 lakhs. Manufactured goods declined by R. 30 lakhs to R. 3,22 lakhs. The yardage of gunny cloth exported rose from 86 millions valued at R. 91 lakhs to 92 millions valued at R. 95 lakhs. The number of jute bags shipped dropped from 42 millions worth R. 1,10 lakhs to 36 millions worth R. 85 lakhs. Exports of tanned hides and skins rose by about 200 tons in quantity and by R. 5 lakhs in value. A decline of R. 11 lakhs was recorded in the exports of cotton manufactures (chiefly piecegoods). There was also a decline of R. 7 lakhs in the exports of pig lead.

STATISTICAL DATA FOR EIGHT MONTHS

*Monthly average returns.

The share of the United Kingdom in the imports rose from 37 per cent. in December, 1932, to 42 per cent. in December, 1933, and in exports from 29 to 35 per cent. The shares of Germany, Japan and the United States in the month under report were 7, 11 and 7 per cent. respectively under imports, and 5, 2 and 9 per cent. under exports.

The tonnage of vessels entered into British India and cleared outward with cargoes from and to foreign countries and British Possessions during the month of December, 1933, amounted respectively to 652,000 and 673,000 as against 592,000 and 662,000 in November, 1933, and 640,000 and 661,000 a year ago. During the nine months ending December, 1933, the tonnage of vessels entered and cleared with cargoes amounted respectively to 5,399,000 and 5,718,000 as compared with 5,135,000 and 5,363,000 in the corresponding period of the preceding year.

The publication of the figures of foreign trade during December, 1933 tends one to consider India's foreign trade in the whole of the calendar year 1933 as compared with the earlier year. It must be said however that the run of the seasons in India and the division of the year into the busy and dull seasons for exports, as also the fact that the budget of the Government of India is framed for the year ending March 31st, suggest clearly that for observing and estimating the trends of trade, the financial year is far more suitable than the calendar year. Nevertheless in view of the fact that the calendar year forms in the mind of the average man a definite unit of time, it might not be altogether unprofitable to consider our experiences during the 12 months ended December 31st. It has also to be remembered that for some time, *that is, since the third* quarter of 1933, 1933 has come to be regarded as a year signifying the end of the worst phase of the trade depression and the beginnings of the first signs of a trade revival. Elsewhere in this issue we have examined at length this question on the basis of figures cited in the League of Nations Bulletin of Staistics for January 1934. And it might be said that a scrutiny of the figures of India's foreign trade during 1933 only tends to confirm the general conclusions *to which the figures of the League of Nations* have led us. The tables we provided in page 19 of our *Commercial Supplement* show in the more important countries of Europe and America a serious decline in the foreign trade of these countries during the year 1933 even as compared with the acceptedly bad year, namely 1932. In India, it is a matter for gratification that the total of exports of merchandise during 1933 at 148.3 crores shows a distinct increase over the 138.17 crores of 1932; and from the standpoint of the visible balance of trade it is even more encouraging that imports during the year fell from 133.63 crores to 116.05 crores. That is, while it has been possible for India to restrict her consumption of foreign goods, this has not in any way deterred her from expanding her export trade to foreign countries. It is a question how long this process can continue. We have occasion to remark elsewhere in this issue that though the maxim that you cannot sell unless you buy has not the same terrors for us as for other countries, still it would be unwise to base any of our national programmes on the assumption that the continuance of this trend in our foreign trade will not meet with serious difficulties in the future.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN

BANK CHAIRMEN'S SPEECHES

The first few weeks of the year are usually a period of stock-taking. The financial and the economic journals, no doubt, start the game on the first working day of the new year in the craze to be first in the field, which involves a sacrifice of accuracy and practical usefulness. For it is not till the figures of business and trade during December and the whole of the old year are available in reliable form, that this stock-taking can be commenced to any purpose. The heads of the principal banks are in a particularly advantageous position in this regard. The annual meetings, which form the occasion for a review of the old year and an estimate of the prospects of the new, occur after the necessary lapse of time; and it might also be said that with the close touch, which bank chairmen have with business developments, and with their command of a wide organisation of branches spread over the various parts of the world, they have been able, justly, to absorb, in the way they have done, the attentions of students of economics and practical businessmen.

Mr. McKenna's Heterodoxy

The chairmen of British banks are discerning businessmen with a high degree of public spirit and capacity to judge the outstanding problems of the national economy. And even among these, Mr. McKenna stands out with a prominence all his own. To the importance, which naturally belongs to an ex-Chancellor of the Exchequer, he has added the interest and fascination of a keen mind ever on the search for the new in economic thought and policy. Not once or twice has Mr. McKenna shocked the grey heads of the world of business and economics with views that are by no means orthodox. The depression had set this mind on a new spate of feverish activity. Six years ago he startled the world of finance by the seemingly novel suggestion that the world was on a dollar standard and that far from gold fixing the value of the dollar, it was the dollar that determined the purchasing power of gold. Two years later, when the depression was well on its way, he argued on behalf of himself and his fellow bankers against the implications of the monetary theory of the depression and contended that to pump new money into circulation and to keep up the turnover of the money and credit markets was more than the bankers could accomplish by themselves. Only last year Mr. McKenna was found to argue with a new zeal the case for inflation as the means of combating and overcoming the present slump. So carping was Mr. McKenna's comment that Mr. Neville Chamberlain, the Chancellor of the Exchequer, was stung to jibe at Mr. McKenna as a Dr. Sangrado, whose faith in blood-letting was so immense that he would not admit its failure as a cure so long as there was one drop of blood left in his unfortunate patient.

Proved Prophet of Inflation

And now Mr. McKenna comes out in the immeasurably flattering role of a proved prophet. He had ordered the charge against the bogey of inflation; and since then the authorities have followed an inflationary policy, though Mr. Chamberlain to save his face might add that it was not the whole, nor even by any means the chief part of the economic policy of the National Government which has resulted in a very considerable lifting of the depression. Mr. McKenna pointed out that the figures of bank deposits showed an increase of nearly 300,000,000 pounds since February, 1932. The active note circulation has gone up by 5 per cent. and bankers deposits with the Bank of England by no less than 55 per cent. England takes a place among the inflationary countries, which is scarcely inferior to any, except one or two South American Republics which have, so to say, gone the whole hog. Mr. McKenna triumphantly points to the fact that all this expansion of credit and currency "has not been attended by any of the dreaded harvests of uncontrolled inflation." No doubt, he recognise that other factors, among which the foremost is the growing sense of security both in this country and throughout the Empire, have been at play. But his theme as a banker is only monetary policy.

Price of Exchange Stability

So far as the future is concerned, Mr. McKenna is content to emphasise that, though exchange stability is much to be desired, "if the price to be paid for his convenience is too high, we must be content to defer it." As the price has relation to the value which one would get back in return, it has necessarily to be considered in any future discussion and negotiations about Britain's commitments in regard to the restoration of the gold standard, how much of tangible benefit Britain will derive from the general expansion of world trade. As a matter of fact, it should be clear that, when trade improves and revival is accelerated, the price, that stability of exchange would offer through an expansion of trade, will seem increasingly bigger; so that one's sense of the value of exchange stability, which is determined now so largely by being in juxtaposition to stability of prices, will have undergone again a new readjustment. Mr. McKenna, however, has not chosen to enquire fully about this question.

Martin's Bank Meeting

It was left to Mr. A. Paton, Chairman of the Martin's Bank to dwell at length on the trade and industry, as distinct from the monetary, aspect of modern economy. Mr. Paton is among the few, who are free from any illusion about the general international character of the recovery of trade, which we have experienced during the last few months. "Last year", said Lord Colwyn, who read Mr. Paton's speech of the Martin's Bank meeting owing to the latter's inability to attend, "witnessed the final breakdown of long-prepared schemes of international co-operation and the explicit assumption by the leading governments of policies of economic nationalism." And the *Financial News* adds in its comments on Mr. Paton's speech that the year 1933 has been nationalism's year rather than anybody else's" and that "it has become more easy for a camel to go through the eye of a needle than for a fresh ton of exports to enter a foreign country." "And most certainly," the *Financial News* adds, "business recovery in foreign country has been 90 per cent. home-made." Mr. Paton affords ample evidence in confirmation of this statement. He points out that in cotton only the home trade was active but the shipments of piecegoods for last year was about 7½ per cent. below the amount for 1932. The shipping industry has found little, if any, relief from the severe conditions which obtained for several years. Iron and Steel industry has improved only to the extent the opportunities in the home market have been expanded. It is not pleasant to imagine what the position of ship-building would have been, if naval contracts had not followed a policy of *swadeshi*. Collieries and railways have benefitted from the new spirit of economic nationalism. Agriculture is frankly a protected industry. Likewise, foreign countries like the United States and Germany have set about reorganising their economic system with purely local remedies without any regard for their repercussions on the outside world.

Air Mail Week

Making for the Mirage

Mr. Paton claims that the depreciation of the dollar has not inflicted any injury on Britain's commercial interests. And though he confesses that we cannot speak in terms of world trade to-day and that, even in regard to recovery as it is now, we can only speak of a number of different "local recoveries" and not a general recovery of international trade, he is inclined to harp on the same string of reconstruction on an international basis. How far Britain herself, not to speak of countries which are more intensely nationalistic in their economic policy, with her elaborate quota system and protection of agriculture and bilateral trade agreements and with her high costs of production will be able to fit in with a programme of international free trade, is a question which few Britishers have yet considered. This has not, however, prevented Mr. Ramsay MacDonald from declaring in a speech at Leeds during the week that he was not altogether content with groups of commercial treaties between two countries and that they have "to work for a comprehensive agreement which would remove from all these big nations those barriers of international trade."

Improvement in Retail Trade

The spirit of stock-taking referred to at the beginning of the article has been strengthened by the disclosure of the *Board of Trade Journal* that December was the third month in succession to show an advance in retail trade when compared with the similar month in 1932. It is generally thought that the rise for December, which is as much as 4.1 per cent., following upon an increase of 0.6 per cent. for October and 2.8 per cent. for November indicates a real expansion in retail trade. The figures are taken from the statistics prepared by the Bank of England and relate to the trade of a number of departmental stores, concerns operating multiple and retail shops, independent retailers and a representative section of the retail co-operative societies. In both London areas as well as in the South of England, sales were higher by 5 per cent. or more than those in December, 1932, though for Scotland, where Christmas is generally less of a festive occasion, the rise is the smallest in any district. Sales of food and perishables amounting in November to about 48 per cent. of the total value were larger in December than a year earlier by 2.1 per cent. Sales of non-food merchandise, which are perhaps more indicative of general conditions, expanded by 1.4 per cent., 3.9 per cent. and 6 per cent. in October, November and December. The increase in piecegoods was the first upward movment since July last. Even more encouraging than the increase in sales is the fall of 1.9 per cent. as compared with the corresponding date in 1932 in the value of total stocks at the end of December, 1933. This decline is the largest since August and may possibly be due to the success of the end of season's "sales" and to a belief on the part of the public that a rise in retail sales is now more probable than any further fall.

Mr. Runciman and The Cotton Trade

Importance equal to that of business indices, attaches, from the point of view of the future, to the meeting which Mr. Walter Runciman, the President of the Board of Trade, had with the leaders of the cotton trade during his two days' visit to Manchester. Though ultimately Mr. Runciman had not much to divulge, hopes were widely entertained that his tour is bound to influence the policy of the Cabinet regarding the cotton trade. At any rate, it was believed that as a result of the personal contact, which was the principal purpose of Mr. Runciman's visit, the Government would before long be induced to take a more active policy in dealing with the question of Japanese competition in India and in the Crown Colonies and in the Dominions. It may be pointed out in this context that the Empire Committee of the Federation of British Industries recenly passed a resolution, which has been forwarded to the Government, placing on record "the great and immediate importance it attaches to the institution of a full system of Imperial Preference between the United Kingdom and the Colonial Empire." The Committee points out that many colonies are free from treaty restrictions, and in such cases the Committee recommends that immediate action should be taken to introduce an effective measure of preference for United Kingdom goods. To return to Mr. Runciman's visit, it is reported that he was duly informed of the difficulties which the Committee was facing in the course of its negotiations with the representatives of the Japanese textile industries and suggestions were made by which the actions and recommendations of the Committee could be made more effective and maximum benefit obtained for the cotton trade in the shortest possible time. But in spite of the hopes entertained in Lancashire Mr. Runciman had nothing to offer them, beyond the vague assurance that "there shall be nothing in the Board of Trade or Government itself which shall impede the ambition to raise and maintain our hold on world trade and if possible to extend it in volume."

Indian Cotton and Lancashire

It is of interest to India to note that Mr. Runciman has also met the Indian cotton enquiry committee which has been set up to encourage Indian cotton in Lancashire. The Manchester Chamber of Commerce has announced that a large number of spinners in the Lancashire cotton trade are now making yarn composed either wholly or in part of Indian cotton. It is reported that nearly 15 mills are engaged in making yarn from Indian cotton to implement Lancashire's promise to India to use more. An official announcement claims that evidence is not lacking that the movement to extend the use of Indian cotton in Lancashire is meeting with response. A reference should, perhaps, be made in this context of the negotiations that are now taking place for a new combine in the spinning section of the cotton industry in which nearly 10 or 12 mills will eventually be merged including the mills controlled by Sir John Leigh, M.P.

FRANCE

TRADE AGREEMENTS

There was comparative calmness in the commercial atmosphere during the last week end, when the authorities in France decided to restore to 100 per cent. the quotas for a "very abundant list of goods" from the United Kingdom. The long expected list has at last been sent to Great Britain where, the report says, it is being closely examined. From the Foreign Office the list has been transmitted to the Board of Trade, which, after studying the schedule in the light of statistics and after ascertaining the value of the concessions, will submit its reports to the President, Mr. Runciman, for discussion in the Cabinet in its Wednesday meeting. This import quota policy has an important bearing on the negotiations that are to be carried on in London for a new commercial treaty ; and in view of the fact that the Anglo-French trade agreement is nearly half a century old it arouses a peculiar interest in British trade circles.

Official quarters in Britain are uncommunicative as to what commodities were included in the new schedule of quotas. But it is reported that the quota of 100 per cent. is to be applied to the following British imports into France :

Air Mail Week

Fish of all kinds, paper and cardboard, machine tools, hides and skins, cast iron, steel iron and iron wire, copper wire, etc., steam and internal combustion engines, sewing machines, counter-sinking machines, mortising machines, etc., chemical products, spices, woolen cloths and woolen hosiery (most kinds), clothing and clothing accessories, a certain number of rubber products, elastic bands and sports articles.

While the above list is fairly exhaustive and covers all industries, Great Britain does not appear to have been satisfied. Preliminary calculations indicate that the total loss to British trade will amount to about £500,000 a year, excluding the loss due to the cut in the coal imports. If, however, a further reduction of 10 per cent. in coal, which is expected, is taken into account, the total loss to trade is estimated to be in the neighbourhood of £1,200,000 a year. Apart from the note of dissatisfaction, which is a feature in all negotiations of this nature, it will be noted that, on the whole, the revised schedule restores most of the British imports to 100 per cent. of the 1932 level, raises certain classes of goods and maintains the 25 per cent. quota in the case of certain important industries like cotton yarns and cotton piecefoods.

The British trade interests particularly object to the reduction in quota in cotton piecegoods ; and to some extent this sounds justifiable. The effect of this cut on this branch of the industry can be gauged when it is remembered that British trade with France in bleached and unbleached cotton goods in normal times represents a value of £46,000 and that in cotton yarns and piecegoods about £270,000. An import of only 25 per cent. of this figure, therefore, threatens Great Britain with a loss of £200,000 per annum. Taking the other industries excluding coal, in which the British imports have not been restored to 100 per cent., the total loss is estimated to be only £500,000 per annum or thereabouts.

More than the other items coal is absorbing a lion's share of the attention of the Board of Trade. As it forms, one of the key industries of England, Britain has been consistently opposing even the slightest attempt to cut her imports quota into France. The revised schedule fixes the British coal imports at 90 per cent. ; but it is not known if this quota cut is on the present coal quota or on the quota existing before December, 1933 when a cut of 10 per cent. was made. If it represents 90 per cent. of the existing quota, it amounts to a cut of 10 per cent. which would result in a loss to British trade of about £600,000 to £700,000 per annum. As this is greater than the total loss threatened in all the other industries put together affected by two revised quotas, there is no wonder that the efforts of the proposed reduction should be most critically examined. In some quarters an additional cut of 10 per cent. is also anticipated.

Preliminary examination being over, dissatisfaction is taking shape into definite protests. Dr. Leslie Burgin, Parliamentary Secretary to the Board of Trade, has taken the lead in this direction. Speaking at the sixtieth anniversary banquet of the British Chamber of Commerce he is reported to have said as under :

"The British Government would not tolerate any discrimination against British trade on the part of the French Government. It would be a sad day if any policy on either side of the channel were to be developed which would cause the Anglo-French friendship to be weakened. It was, however, a fundamental principle of mutual trust attaching to such a partnership that there should be mutual frankness in times of difficulty. In removing one British cause for complaint the French Government has thought it fit to replace it by another, for after the removal of the surtax there had come the quota." Mr. Wellman, the President of the Chamber of Commerce urged that both countries should regain their freedom of action and negotiate in accordance with their mutual needs unhampered by such international engagements as the Most-Favoured-Nation clause, etc. Nor has the British Government lost time in representing to France the injustice which the new list of French quotas will inflict upon various British exporting industries. Representations on the subject, it is understood, are being passed between the two governments.

The trends of trade in France on the other hand do not form a heartening reading. The fears of an unfavourable balance expressed by the Ministry have come true. The total import into France during 1933 totalled 28,425,000,000 francs representing a reduction of 1,382,000,000 as compared with 1932. Exports, however, amounted to 18,433,000,000 showing a reduction of 1,272,000,000 as compared with 1932. The excess of imports for the year was thus 9,992 million francs. The French industrialists are naturally anxious to try all means by which their exports could be increased. There is the French pit-prof wood, which is being used in large quantities by Great Britain ; and enquiries regarding the position of the coal cuts reveal that the French authorities are contemplating to open negotiations with the British importers with the object of securing increased purchase of pitwood. Apparently, France would be willing to forego both the contemplated additional cut of 10 per cent. and the original cut of 10 per cent. on coal, if the Britishers give a guarantee to French pit-wood.

The seriousness of the situation will be realised when it is remembered that France has determined faith in the gold standard. The trans-Atlantic experiment and Roosevelt's gold purchase policy are already causing alarm in French financial circles. Of course, up to date purchases from the Bank of France have been insignificant. For out of the 100 million reported to have been used by America for the purchase of gold, from Europe, only a third of this sum is said to have been utilised in France. But there is no knowing what France will do if the American monetary policy is pursued to its logical conclusion. If America is determined to play a really active role on the exchanges and tries to force the dollar down at all costs, the fate of the gold standard in France will then hang in the balance ; and if France is to continue on gold, it will only be with the support of sterling. When to this is added the adverse effects of a continued unfavourable trade balance, the anxiety of France to secure the greatest possible concessions to her export trade can very well be imagined.

GERMANY

DEBT DISCUSSIONS

More proofs are pouring in that Dr. Schacht's invitation to Germany's foreign creditors to meet in a Conference at Berlin on the 22nd January, was not received by the creditors with as much enthusiasm as perhaps, he expected. While delegates, however, were arriving in Berlin, there was also a certain amount of suspicion in their minds that, after all, they were not going to get what they considered to be their due. For one thing, the matters that would come up for discussion before the Conference were not made known and the information conveyed in the invitation was very vague. The British Long-term and Medium-term Creditors' Committee have made this a ground for their request that the Conference should be postponed till at least the end of the week. It was also rumoured that the British Creditors would go to the length of refusing to send their delegates to the Conference. In addition to

Air Mail Week.

the British Representatives' request, the American and Swiss delegates insisted on the postponement of the Conference. One reason for this is, however, that the British and the American delegates wished to examine the separate transfer agreements negotiated with Holland and Switzerland before the beginning of the Conference. The delegates may also consider the German reply to the British notes of protest already sent. Though the full text of the German reply is not available, it is understood, its main purport has been communicated to the Foreign Office. Dr. Schacht appears to have recognised the reasonableness of these requests, in asmuch as it is announced that the Reichsbank has agreed to postpone the discussion till the 25th January. The information, which the British Creditors have asked for, it is understood, has also been furnished to them.

Satisfied that they are not likely to be disappointed after having made a good beginning, the British Long and Medium creditors have sent in Mr. E. H. Lever and Mr. Richard S. Guinnes to represent them. The British Issuing Houses and the American Issuing Houses have also sent in their representatives. But there will be no French, Dutch or Swedish delegates. It is contended that it is not worth the while of Holland to attend the Conference as the Dutch attitude has already been made clear by the recent negotiations with Germany for the conclusion of a separate transfer agreement. Although Sweden will not be represented, Mr. Jacob Wallenberg has arrived to discuss with the British and American representatives, outside the conference, the Swedish exchange clearing system.

The Reichsbank is also preparing itself for the coming discussions. In an officially inspired article published in the German Press, the Reichsbank has made another attempt to clear the misapprehension with regard to its attitude. The article points out that the complaints of foreign creditors at the severe cut in the interest payments are not justfied in that Germany actually pays 77 per cent. of her obligations and with regard to Great Britain even 87 per cent. An attempt is also made to defend the German bond purchase policy. It is pointed out that these purchases are carried out mainly through additional exports and not out of the Bank's own resources. But all this is only treading well-trodden ground and need not therefore detain us here.

Business Trends

The position of Germany's foreign trade will be an interesting study at this juncture. According to the *"Wirtschaft und Statistik,"* the official organ of the Governmental Statistical Bureau, Germany's balance of payments for the year 1933 was favourable to the extent of Rm. 100 millions. The balance sheet, which is for the first time sub-divided according to the various countries, shows a favourable balance of Rm. 700 millions in trade and Rm. 300 millions in services. As against this there is an adverse balance of Rm. 700 millions on interest payments which, together with the Rm. 200 million on account of the Reparation Payments, makes a total adverse balance of Rm. 900 millions. The return of the Reichsbank issued during the week-end also reveals a slight improvement in the reserve position of the bank. The gold holding is down by Rm. 3,145,000, the whole of which movement is accounted for by a further decline in the amount of gold deposited abroad; on the other hand, the reserve in foreign currency has risen over the week previous by Rm. 5,080,000. If the trade position continues to progress even at this snail's pace for some time to come, it will not be impossible for the Creditors to bargain for an increased payment of their dues in cash at least in the near future.

Both the parties having thus analysed the position and studied the situation, the Conference opened on the 25th instant. The most noteworthy feature of the first day's business is the absence of Dr. Schacht from the Conference due to the Cabinet discussions where it is rumoured Dr. Schacht has suffered a reverse. The first day of the Conference appears to have been devoted to the consideration of the drafts of the agreements with Holland and Switzerland and the British and the American protest against these agreements. The American Representation, it is reported, maintained that Germany's favourable balance of payments with other countries should be utilised in favour of the U.S. The Swiss delegates in defending the agreement are reported to have pointed out the necessity for such agreements to improve Germany's trade balance and even invited other nations to conclude similar agreements. The other creditors on the other hand, protest strongly against this discrimination and are even prepared to back their protest with threats of exchange clearing. Britain, Sweden, Switzerland and Holland are all ready to put the machinery into operation.

But it is difficult to see how this would better the situation. While the nations that enjoy a favourable trade balance can employ this method with advantage against a defaulting debtor, those nations whose trade with Germany is unfavourable will get practically nothing. It would thus in the long run be dangerous and disastrous. But the reports that are available give us to understand that the Conference on the whole has proceded on a friendly and in a hopeful way and that every attempt will be made to conciliate different sections. As for the payments, it is reported that the German bank will not be able to increase the transfer quota reduced from 50 to 30 per cent. The German Government in its reply to the British notes of protest, have stressed the fact that the recent deductions in the cash portion only applies for six months and that, should the trade during the half-year prove more favourable from the point of view of German export surplus than is expected, then the cash payment would be increased from July 1st. If the Conference has come to this conclusion, and if all the creditor nations were satisfied that after all they have not come to the Conference to be the passive spectators of Dr. Schacht's harangue, if they have succeeded in understanding each other more fully, then Dr. Schacht deserves to be congratulated on making the Conference a success.

UNITED STATES OF AMERICA

INDUSTRIAL RECONSTRUCTION

Though the Federal Reserve Bill embodying the proposals contained in the President's Message to Congress for the transfer of the Federal Reserve gold stocks and the establishment of an exchange equalisation fund continues to absorb the attention of the country as of the legislature, there have been during the week interesting developments in the various

PUBLICATIONS OF THE LEAGUE OF NATIONS

Just out WORLD ECONOMIC SURVEY, 1932-33

348 pages ... ... Price: bound in cloth Rs. 5 8 0

The Survey for 1932-33 begins with a description of the revival of economic activity in the autumn of 1932 after the Lausanne Conference and covers the period up till the close of the first session of the Monetary and Economic Conference at London twelve months later. The story is thus brought up to the end of July 1933.

As in the previous Survey adequate use is made of statistical information regarding prices, production, international trade, public finance, wages, employment, profits, etc. collected from all over the world by the Economic Intelligence Service of the League of Nations. Despite the wealth of material thus made available, the Survey, like its predecessor, is a clear and connected story of recent developments valuable to the specialist for its scope and accuracy, and equally to the layman because of its clarity.

The American banking crisis, the movement towards reduction of hours, the situation regarding international indebtedness, the magnitude of agricultural stocks compared with current production, the decline in international trade, the recent rise in prices and recovery of production, are among the subjects of topical interest surveyed in this volume.

WORLD PRODUCTION AND PRICES, 1925-32

155 pages ... ... Price: Rs. 2 12 0

This volume contains an analysis of the changes in the world output and stocks of raw materials and foodstuffs, in the world's industrial activity and, finally, of price movements and relationships. It includes the index number of world production of raw materials and foodstuffs calculated by the Economic Intelligence Service of the League and international index of industrial production, together with abundant statistical material, *e.g.*, national industrial production indices for some 20 countries, data comparing production of investment and consumers goods, and indices of activity of some 15 important groups of industry in a large number of countries.

The chapter on prices contains an analysis of the movement of wholesale prices in various groups of countries; comparisons are made between the evolution of gold and sterling prices, raw materials and finished products, international and domestic goods, investment and consumption goods, etc.

The chapters on production cover the years 1925-1932, and, where possible, the first quarter of 1933. The discussion of price movements has, where figures were available, been brought up to May, 1933.

departments of national economy, which, as a change from the dreary tale of the gold policy, might be given precedence in this weekly chronicle. In the first place, the stock markets have been more busy than usual; and though Wall Street is still opposed to the main programmes of Mr. Roosevelt its attitude to the Federal Reserve Bank is one of friendly indifference, possibly because it believes that in the wake of the Bill substantial measures of inflation should come and that, as a result, stock prices should be on the upward trend again. The Government are going ahead with their programme of formulating the Foreign Financing Corporation which was projected recently for the purpose of stimulating the export trade of the United States. On January 24th the President held a long conference with Mr. Jesse Jones, the head of the Reconstruction Finance Corporation, the Controller of the Currency and the Under-Secretary of the State; and there is every promise that before long the new Corporation will have started its business in right earnest. Meanwhile, it is important to note that Mr. Jones has taken steps to reduce the credits granted to China, as in his belief the Reconstruction Finance Corporation should no longer engage in the extension of considerable lines of credit for foreign countries. This may also be interpreted as another step in the preparations for the initiation of the foreign financing corporation.

Senator Bankhead conferred with President Roosevelt towards the end of the week under review and stated thereafter that he would press for a bill to fix cotton output at 9,000,000 bales by restrictions on ginning.

By far the most important development of the week is the publication of the long-awaited Eastman report on Rail-Road organisation. Mr. Eastman affirms that Government ownership is the ultimate solution for rail-road problems; but at present the nation is not, he says, ready to bear the financial risks involved. For the present, therefore, the report recommends the consolidation of lines, if necessary through compulsion, by exchange of securities on a moderate scale and the appointment by the Federal Rail-Road Coordination of public directors to the boards of the consolidated Railways. Mr. Eastman is opposed to the present legal restrictions on the reduction of employees on rail-roads and is preparing a bill embodying his recommendations to secure the requisite consolidation leaving other measures for a later time. The author of the report has apparently little confidence in the revival of rail-road credit, and he favours state-aid for bankrupt companies, with a view to secure speedy reorganisation with a very material reduction of fixed charges. Coordination of the lines, he believes, will greatly assist in increasing operating income and he is confident that earnings will revive rapidly on any upturn in general business. He suggests that when that happens, a liberal use of sinking fund should be made to reduce the load of debts. The rail-road executives feel somewhat disappointed at Mr. Eastman's presentation of the case for the eventual Federal ownership of rail-roads. But the report would lack all practical significance, unless Congress makes up its mind to increase the powers of the executive for achieving the coordination of the railways.

The other important development in the reconstruction of internal industry is the approval by Mr. Ickes, the Secretary of the Interior, of the oil marketing agreement which was presented by the trade towards the end of last year. More than 85 per cent. of the total refining capacity in the country is behind the agreement; and it is expected that at least 95 per cent. would ultimately accord their support, though it must be added that Texas, the centre of the oil industry, is asking the Federal Administrator for allowing an increase of 150 thousand barrels in its own daily output for which corresponding reductions are effected in the quotas of other States The code follows the now-accepted principles underlying such instruments. There is provision for a minimum profit for the retailer and a standard contract between the retailer and the refiner. The *consumer's inerests are also safeguarded.* And Mr. Ickes retains the right to cancel the whole agreement, if at any time it shall be shown to be contrary to the public interest. The industry is viewing the agreement very favourably; and the Petroleum Association has endorsed the oil code stating that within four months of its operation, the industry has received double the average price for oil previously obtained. Its ability to stabilise gasolene prices is not doubted in any quarter.

Business reports are of a somewhat mixed nature. The Ford Motor Company's production schedule has been increased to more than 3,000 units per day. Chevrolet is expected to reach the 2,000 mark shortly. The other manufacturers are also rapidly coming into line. Perhaps, the most encouraging piece of news is the report of the New York Federal Reserve Bank that department stores sales showed during the first half of January an increase of 8 per cent. over those of the corresponding year of last year. The Administration's plans for restricting wheat are reported to have met with a 77 per cent. success and the present acreage is now about 7 per cent. below the 8-year average. In the cotton spinning industry, the restrictions on the installation of productive machinery have worked well; and the number of spindles worked in December has fallen to 73.3 per cent. of capacity as compared with 96.3 per cent. in December and 87.1 per cent. in the previous December. The steel industry has had a scaling down. Steel ingot production during the week is, according to the Iron and Steel Institute, at 32.5 per cent. of capacity compared with 34.2 per cent. for the previous week. The magazine, *Steel*, continues to preserve its rosy outlook and records the decline as only a temporary one caused by the delay in public works orders and that at the present level, steel mill activity shows an advance of 5 per cent. It is interesting that power output for the week ended January 20th amounted to 1,624,846 kil-wat., an increase of 9.9 per cent. on the corresponding week of last year though the increase is not so large as that recorded in the previous month.

The trade returns for December show an increased favourable balance. Exports exceeded imports by $59,000,000, compared with an export surplus in November of $56,000,000. For the whole of 1933, the surplus was $266,000,000, against $288,00,0000 for 1932.

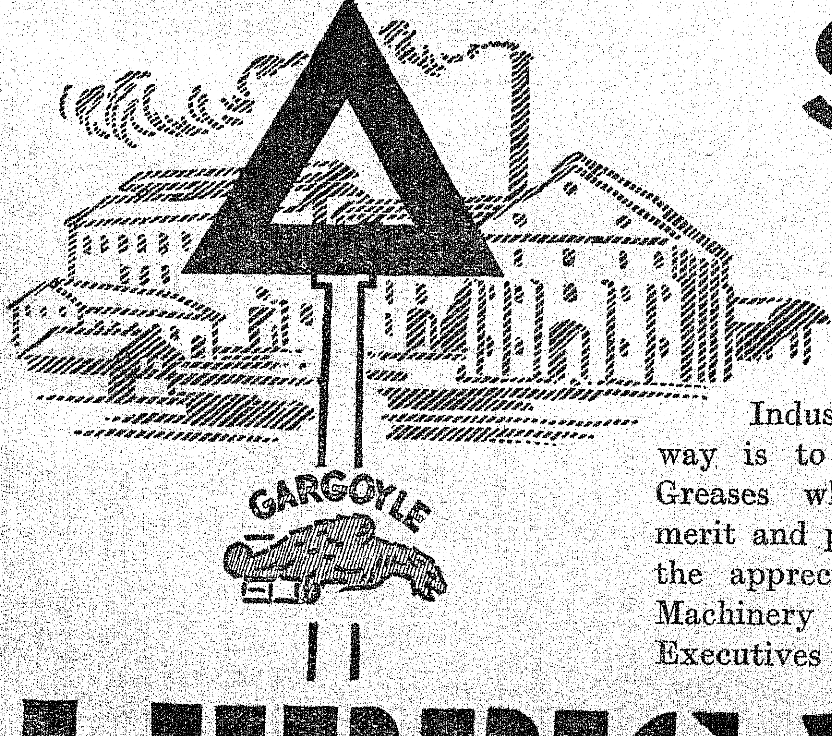
December merchandise exports were $192,000,000, against $184,000,000 in November and $132,000,000 in December, 1932.

Imports in December were $133,000,000, against $128,000,000 in November and $97,087,000 in December, 1932.

For the whole of 1933 exports totalled $1,675,000,000, compared with $1,611,000,000 in 1932. Imports for the year were $1,449,000,000, against $1,333,000,000 in 1932.

December gold exports were $11,000,000, against $13,000 in December, 1932, and imports $1,687,000, against $100,872,000.

By the end of the week under review, the Federal Reserve Bill has very nearly completed its passage through the legislature. The principal impediments to the smooth progress of the Bill are the demand that the dollar stabilisation fund must be controlled by a board of 5 members and also the anxiety of the silver enthusiasts to secure further government action in the cause of the white metal. Among the latter Senator Borah was the most thoroughgoing, in as much as he urged the remonetisation of silver. Senator Wheeler followed him with an amendment to provide that the Government should buy a large quantity of silver for currency expansion purposes. He also insisted that the Government should make monthly purchases until the silver price attains a ratio to gold of 16 to 1. As for the Reserve Bank's determination to fight the Treasury's efforts to appropriate the gold profit, it is by now clear that there is no chance of their prevailing against the President's wishes. As regards the imposition of a board of five to control the operations, the President stated exchange experts will participate in its management. This was the answer to Senator Carter Glass, who pointed out in the course of the debate that the British fund was administered by three exchange experts. The President obtained another victory when the Senate eliminated the amendment of the bill which would



Safety first

In selecting Lubricants for Sugar Mills, as in any other Industry, the safe and economical way is to rely upon those Oils and Greases which, by their outstanding merit and proved performance, have won the appreciation and commendation of Machinery Manufacturers and Plant Executives alike.

LUBRICANTS

SOCONY-VACUUM CORPORATION
6 CHURCH LANE, CALCUTTA.

have limited the operations of the Exchange Fund to controlling the dollar and prevented the Treasury from using it for government bonds. Likewise, the plan of the House of Representatives that the President should report to Congress on the operations of the Stabilisation Fund was also rejected.

The first big step in the Government's programme of new financing was taken on January 24th, when the Government issued two operations of 500 million dollars of 2½ per cent. and 1½ per cent. Treasury Notes due on March 15, 1935 and September 15 respectively. On January 26th Mr. Morgenthau, the Secretary to the Treasury, formally announced that the amounts offered were subscribed 5 times over. In the case of applicants for less than 10,000 dollars full allotment was made. But in the case of applications for higher amounts allotment was scaled down to 14 per cent. The success of the new issue disposes of the bogey of investor's nervousness and the consequent difficulty of Government in finding new money for their own purpose. Even now it is suggested in some quarters that the success of the issue must be attributed to the fact that, through the activities of the Reconstruction Finance Corporation, the Government have acquired control over a number of banks and that it was in their hands to make the banks subscribe largely to the government issues. But it is forgotten that out of the total amount of 1,000 million dollars a substantial amount should have come from minor individual applicants and there can be no better testimony to the general confidence inspired by the new Government in the minds of the average investor.

Following is a summary of the weekly statement of the twelve Federal Reserve Banks for the week ended January 25, 1934 (in thousands of dollars):—

RESOURCES :—		Inc. or dec.
Gold held exclusively against Federal Reserve notes	2,585,170	−26,120

EVERY 1934 WOLSELEY IS A "SPECIAL FEATURE" CAR

THE Wolseley range has become famous for its "special feature" cars. No matter what model you intend to buy, a Wolseley is always more interesting both to own and to drive. The special features you get in a Wolseley incorporate the very latest development in modern motoring. Synchromesh gears are, of course, on all models. Controlled Free-Wheeling is obtainable on the Hornet, giving a clutchless "change," while free-wheeling and automatic clutch in the case of the "16" and "21/60" afford you the easiest gearchange in the world. Further special features administer to your safety, comfort and economy. Many of them are only obtainable on a Wolseley model. Every Wolseley is, by reason of these features, a more delightful car to drive.

G. McKENZIE & Co. (1919) LTD.
CALCUTTA

HINDUSTHAN CO-OPERATIVE INSURANCE SOCIETY LTD.

The Revenue Account and the Balance Sheet of the Hindusthan Co-operative Insurance Society for the year ending 30th April, 1933 has been issued to the public. While the history of life assurance progress in general in the world during the recent depression years, has shown us that the world-wide trade depression has left its mpression even on life insurance business, it is something remarkable and wonderful to note that these very depression years have proved to be the years of intense and heady progress to the Hindusthan Co-operative. While the New Business of almost all the English, European, American and Indian Life offices has suffered a setback during the past few years, the New Business of Hindusthan shows rapid strides of improvement, year after year. From Rs. 1,16 lakhs in 1930-31 it has spurt up a 23 per cent. increase to Rs. 1,42 lakhs in 1931-32 and during the year under review the New Business of the company has made a further big jump of 41 per cent. of the previous year's figure reaching the high water mark of Rs. 2 crores which no other Indian life office except the Oriental, has so far done in a single year. This is indeed an achievement which the company may be proud of. The total business in force, of the Society at the end of the year was Rs. 7,08 lakhs.

The Revenue account shows on the receipt side a total premium income of Rs. 31.2 lakhs, an interest income of Rs. 7.3 lakhs being the guaranteed (by the shareholders) 6 per cent. interest on the life fund and on the disbursements side, claims by death of Rs. 6 lakhs, claims by maturity of Rs. 5½ lakhs, management expenses of Rs. 11½ lakhs and an increase of about Rs. 14½ lakhs in the life fund. The life fund has been increased substantially to Rs. 1,33 lakhs from Rs. 1,18½ lakhs at the beginning of the year. The ratio of the expenses of management and procuration to the total premium income during the year under review has slightly increased to 37 per cent. from 35 per cent. in the previous year. This increase in the expense ratio is of course inevitable in the case of companies which make such headway of progress in their New Business. There is no doubt that higher and higher record breaking New Business figures serve very well in advertising the company. But companies of such soundness and status as the Hindusthan Co-operative should also look to the other important criterion of a good life office, namely, that of the expense ratio. We trust that the management will try to reduce the expense ratio to a much lower level in the near future.

The Balance Sheet of the company as at 30th April, 1933, shows on the liabilities side a paid up capital of Rs. 3.6 lakhs, a life fund of Rs. 1,33 lakhs, outstanding claims amounting to Rs. 6 lakhs, house properties sinking fund of Rs. 2½ lakhs, an investment depreciation fund of 2½ lakhs and sundry debts amounting to Rs. 3½ lakhs. On the assets side, mortgages on real properties amount to Rs. 55 lakhs or 36 per cent. of the total assets (Rs. 1,52½ lakhs), house and landed properties amount to Rs. 35 lakhs or 22.9 per cent. of the total assets, Giltedged securities and policy loans account for Rs. 15 lakhs or 9.8 per cent each, outstanding interest amounts to Rs. 8.8. lakhs or 5.8 per cent. outstanding premiums amount to Rs. 5.2 lakhs or 3.4 per cent, deposit to the banks account for Rs. 7 lakhs or 4.6 per cent and cash amounts to Rs. 5.4 lakhs or 3.5 per cent. In contrast to the investment policy of other leading Indian Life Offices, the Hindusthan has distributed its investments on a wider range. The investments on real properties and mortgages on real properties account for nearly 60 per cent. of the total assets and this seems to be a rather high proportion particularly in view of the great risks attached to such investments.

In this connection we have to mention that the Society is celebrating its Silver Jubilee early next week.

To commemorate this occasion, the Society has introduced to the Public a novel and very attractive scheme of policy named "Silver Jubilee policy." It is a comprehensive plan of life insurance and embodies several kinds of benefits to the policyholder and his family.

The Silver Jubilee policy is a further extension of the Deshabandu policy providing much more advantages including a pension of one tenth the sum assured per annum after the assured reaches the age of 55 or 60 as the policyholder choses. The new scheme which is a with-profit plan is offered under two terms, the premiums ceasing at age 55 or at age 60 as the assured chooses, the premium rates for the latter being lower than that of the former. The benefits allowed may be stated separately under the two contingencies that may happen.

(A) In the event of the death of the life assured before the stipulated term, that is before his attaining the 55th or 60th year as the case may be

(*i*) There will be made an immediate payment to the family of the assured of all the vested bonus accured so far

(*ii*) Besides there will be a family comfort pension of one tenth the sum assured per year, payable in four quarterly instalments and during the reminder of the policy term, that is, payable from the date of death of the policyholder to the policy anniversary date when the assured would have attained the stipulated age.

(*iii*) In addition to the above two benefits, the full sum assured will also be payable to the family at the end of the stipulated term, that is, just when the family comfort pension ceases to be paid.

(B.) In the event of the assured surviving the stipulated age.

(*i*) The vested bonus is paid immediately to the assured.

(*ii*) A personal comfort pension of one tenth the sum assured per annum in four quarterly instalments payable till the death of the assured.

(*iii*) In addition to the above the full sum assured is payable on the death of the assured to his legal representatives, thus this policy provides every possible assistance to the assured and his family. Though the premium appears to be rather heavy, they are in fact low, when the comprehensive benefits assured under the different contingencies that may arise, are taken into account. It is expected that this novel scheme is bound to be popular among the insuring public.

STATISTICAL INFORMATION

TATA IRON AND STEEL

Messrs. Tata Sons, Limtied, agents for the Tata Iron and Steel Company, Limited, report that the total approximate production of iron and steel at the Works at Jamshedpur during the month of January was:—

Pig iron	75,000 tons.
Steel Ingots	63,700 ,,
Finished steel	46,500 ,,

TRADE OF BOMBAY

The aggregate value of the foreign trade of Bombay—Imports and Exports—for the month of December, 1933, amounted to Rs. 8.55 crores, showing a decrease of Rs. 6.9 crores, or over 44 per cent., as compared with the figures for December, 1932, and of Rs. 16.39 crores, or nearly 66 per cent., as compared with those for December, 1931. The decrease of Rs. 6.9 crores is due to smaller imports and exports of both merchandise and treasure.

Imports of merchandise amounted to Rs. 3.93 crores, showing a fall of Rs. 30.09 lakhs, or 7 per cent., from the figures for December, 1932, but a rise of Rs. 25.97 lakhs, or nearly 7 per cent., over those for December, 1931. The fall of Rs. 30.09 lakhs is chiefly due to smaller arrivals of cotton piecegoods (−nearly 11 million yards and −Rs. 16.71 lakhs), aniline dyes (−Rs. 9.92 lakhs). cotton twist and yarn (−over ¾ million lb. and −Rs. 6.98 lakhs), artificial silk piecegoods (−over 3½ million yards and −Rs. 5.75 lakhs) and silk manufactures (−Rs. 5.72 lakhs). On the other hand, there were noticeable increases in the imports of cotton, raw (+860 tons and +Rs. 5.48 lakhs, metals—iron and steel (+Rs. 5.25 lakhs), machinery and millwork (+Rs. 5.13 lakhs), silk, raw (+Rs. 4.97 lakhs). motor cars, including motor wagons, cycles and parts thereof (+Rs. 4.61 lakhs and mineral oils (+nearly 2 million gallons and +4.21 lakhs) Imports of gold amounted to Rs. 7.55 lakhs as against Rs. 8.22 lakhs and Rs. 17.41 lakhs and those of silver to Rs. 3.14 lakhs against Rs. 4.01 lakhs and Rs. 53.75 lakhs, respectively.

Exports of Indian produce amounted to Rs. 1.89 crore, showing a fall of Rs. 17.58 lakhs, or over 8 per cent., and of Rs. 71.71 lakhs, or over 27 per cent., from the figures for December, 1932 and 1931, respectively. The fall of Rs. 17.58 lakhs is mainly due to smaller shipments of cotton, raw (−1,971 tons and −Rs. 15.57 lakhs) and cotton manufactures (−Rs. 2.88 lakhs). Exports of seeds, on the other hand, rose by 13,101 tons in quantity and by Rs. 3.92 lakhs in value and those of wool, raw, by nearly ½ million lb. in quantity and by Rs. 2.69 lakhs in value. Imports of gold amounted to Rs. 2.42 crores as against Rs. 8.74 crores in December, 1932, and Rs. 17.71 crores in December, 1931, and those of silver were *nil* against Rs. 33.232 and Rs. 5.67 lakhs, respectively.

Re-exports of foreign merchandise amounted to Rs. 20.42 lakhs as against Rs. 29,42 lakhs and Rs. 19,11 lakhs, respectively.

The trade statistics of the first nine months of the current financial year show a deficit of Rs. 8.29 crores, or 19 per cent., and of Rs. 5.93 crores, or 14 per cent., in imports, and of Rs. 7.14 crores, or 11 per cent., and of Rs. 9,35 crores, or 11 per cent., in exports, as compared with the figures for the corresponding months of the years 1932-33 and 1931-32, respectively. Imports of gold fell by Rs. 17.24 lakhs and Rs. 96.14 lakhs to Rs. 45.24 lakhs and those of silver by Rs. 62.83 lakhs and Rs. 2.23 crores to Rs. 35.37 lakhs. Imports of merchandise also declined by Rs. 7.5 crores, or 18 per cent., and by Rs. 2.75 crores, or 7 per cent., respectively, to Rs. 34.15 crores. The decline of Rs. 7.5 crores from the figures for the corresponding period of 1932-33 is chiefly attributable to smaller arrivals of cotton, raw (−35,339 tons and −Rs. 3.14 crores), cotton piecegoods (−over 68¾ million yards and −Rs. 1.35 crores), cotton twist and yarn (−over 7 million lb. and −Rs. 73.03 lakhs), artificial silk piecegoods (−over 30½ million yards and −Rs. 59.98 lakhs), silk, raws and manufactures (−Rs. 52.38 lakhs), metals and ores (−Rs. 48.77 lakhs), and mineral oils (−Rs. 47.13 lakhs though the quantity imported was larger by over 1¼ million gallons). Imports of machinery and millwork and motor cars, including motor wagons, cycles and parts thereof, however, increased by Rs. 46.86 lakhs and Rs. 38.29 lakhs respectively.

Exports of gold amounted to Rs. 33.4 crores as against Rs. 46.7 crores and Rs. 36.72 crores and those of silver to Rs. 6.79 lakhs against Rs. 14.08 lakhs and Rs. 1.29 crore. Exports of Indian produce were valued at Rs. 20.34 crores, showing an increase of Rs. 6.05 crores, or 42 per cent., over the figures for the corresponding period of the year 1932-33, but a fall of Rs. 4.22 crores, or 17 per cent. from those for the same period of 1931-32. The increase of Rs. 6.05 crores is due mainly to larger shipments of cotton, raw (+61,765 tons and +Rs. 3.72 crores), seeds (+165,367 tons and +Rs. 1.7 crore), wool, raw (+6½ million lb. and +Rs. 27.52 lakhs) and hides and skins, raw and tanned +Rs. 16.45 lakhs).

Re-exports of foreign merchandise amounted to Rs. 1.64 crores as against Rs. 1.46 crore and Rs. 2.23 crores, respectively.

RAILWAY EARNINGS

The total approximate gross earnings of all State-owned Railways for the week ending 20th January, 1934 (42nd week), amount to Rs. 168 lakhs, Rs. 12 lakhs LESS than the figures for the last week and Rs. 7 lakhs LESS than the figures for the corresponding week of the previous year and Rs. 10 lakhs LESS than the corresponding week of 1931-32.

The total approximate gross earnings from 1st April, 1933, to 20th January, 1934, amount to Rs. 67.35 crores or Rs. 134 lakhs MORE than the figures for the corresponding period of the previous year and Rs. 43 lakhs LESS than the corresponding period of 1931-32.

The following are the up-to-date approximate gross earnings of the State-owned Railways from 1st April, 1933, as compared with the actuals of the corresponding period of last year:—

IMPERIAL BANK OF INDIA

Extract from Board of Governors' report:

Report for the half-year ended 31st December, 1933, disclosed a net profit of the Bank for the half-year amounting to Rs. 36,90,443-6-6 after making the usual and necessary provisions, which, with Rs. 26,94,802-12-9 brought forward from the half-year ended the 30th June, 1933, makes a total of Rs. 63,85,246-3-3.

This sum the Governors of the Bank disposed of as follows:—

	Rs.	A.	P.
Payment of a Dividend to the shareholders at the rate of 12% per annum free of Income-tax	33,75,000	0	0
Transferred to Reserve Fund ...	2,50,000	0	0
Transferred to Pension Fund ...	74,600	0	0
Carried forward to the Profit and Loss Account of the current half-year ...	26,85,646	3	3
Total ...	63,85,246	3	3

The Bank Rate remained unchanged at 3½% throught the half-year. This rate was lower than the average of any previous half-year and reflects the continuance of cheap money due to lack of trade demand and the continuance of low commodity prices. The average rate for the corresponding period of 1932 was 4.033.

The continued cheapness of money has enabled Government to borrow on Treasury Bills at low rates with a consequent easy Ways and Means position, and the strength of Government Securities has been well-maintained. Rupee Exchange after a temporary lapse finished strong, the continued export of gold being responsible.

MUIR MILLS CO., LTD.

Extracts of Director's report:

Report for the year ended 31st December, 1933.

The result of the year's working after payment of all charges and after providing for a bonus to employees and for estimated Taxation is a profit of Rs. 6,09,733-7-5.

Adding to this the balance brought forward from 1932 *viz.* Rs. 2,11,796-8-7 there is a sum of Rs. 8,21,530-0-0 available which the Directors have allotted as follows:—

	Rs.	A.	P.
Add-interim Dividend of Rs. 1-8 per share on the Preference shares, and Rs. 5 per share on the ordinary shares to 30th June	1,95,000	0	0
For Depreciation	1,00,000	0	0
Total Rupees ...	2,95,000	0	0

Leaving for disposal a sum of Rs .5,26,530-0-0 which they propose to deal with as follows:—

	Rs.	A.	P.
Final Dividend of Rs. 1-8 per share on the Preference shares (free of Income Tax)	45,000	0	0
Final Dividend of Rs. 5 per share on the ordinary shares making 20% for the year (free of Income Tax)	1,50,000	0	0
Bonus of Rs. 7-8-0 per share on the ordinary shares (free of Income Tax) ...	2,25,000	0	0
To be carried forward	1,06,530	0	0
Total Rupees ...	8,21,530	0	0

Owing to the continued depression sales were only possible on very narrow margins. Cloth prices have not been so low for many years. T. Smith, Chairman, T. Gavin Jones, Ram Narain H. Horsaran, *Directors.*

Comparative statement of Balance Sheets for the last three consecutive years.

INDIAN WOOD PRODUCTS

Extract from Managing Agents report:

Report for the year ended 30th September, 1933.

The Managing Agents report that the net proceeds from sales amounted to Rs. 8,19,830-7-7 during the year and the profit on Revenue Account is Rs. 5,04,212--11-7 including the interest earned on the investment of the Company.

A sum of Rs. 81,853-9-0 has been set aside for Income and Spper Tax

Stocks of manufactured goods have been valued at below cost.

After writing off Rs. 76,161 for depreciation on Buildings, Machinery and Plant etc., and providing for Calcutta charges and commission the net profit for the year including Rs. 1,44,253-13-7 brought forward from the previous year gives a balance of Rs. 4,14,769-10-10 for disposal, which it is recommended should be disposed off as follows:—

	Rs.	A.	P.
Payment of Dividend of 20% free of Income Tax on 11,98,50 shares of Rs. 10 each ...	2,39,700	0	0
Transfer to Contingent Fund	25,000	0	0
Carry forward	1,50,069	10	10
Total Rupees ...	4,14,769	10	10

The factory worked steadily throughout the year, Machinery, Plant and Buildings were maintained in good state of repair. There was no improvement in the fishing industry in Europe and export sale of Cutch shew a slight decrease. Sales in the Indian market also shew a decrease and prices were lower. Gillanders Arbuthnot & Co.—Managing Agents.

	Rs.	A.	P.
Opening Stocks	88,354	0	0
Closing Stocks	92,897	0	0
Sales	8,19,830	7	7

WORLD OF INDIAN FINANCE

Calcutta, Feby. 16.

Except for a slight-very slight-easing off in the closing hour or two, money rates have remained high, considerable pressure being felt for credits. Business was done up to 3½ per cent. in interbank call money. Another indication of monetary stringency of a fairly acute kind is to be found in the fall of the Imperial Bank cash balance to so low a level as Rs. 11½ crores. The percentage of cash to liabilities has also declined to 14.27 per cent. The Bank return, of January 26 showed cash at Rs. 17 crores and cash percentage at 20.91 per cent. There has thus been a reduction of cash to the substantial amount of Rs. 5½ crores. The coincidence of a continued squeeze for funds in banking circles with the recording of a low cash percentage in the latest Bank return has given rise to speculations as to whether any rise in the Imperial Bank rate is likely in the near future. We are not in the secret of the authorities but we have no doubt that, despite these outward symptoms and tokens of stringency, there is no justification or warrant for any increase in the Official Minimum. This view, which we wish to put forward with all emphasis, is arrived at on a careful analysis of the various factors that have contributed to the tight money conditions that have been prevailing practically since the latter half of December.

Bankers seem to be mystified about the anomalous position that exists to-day. The anomaly arises this way: Up till this week, the Controller of the Currency has been borrowing only Rs. 1½ crores by way of fresh Treasury Bills. The Maturities have been considerably in excess of the amount that has been renewed in Treasury Bills. On balance, the market should, therefore, have received surplus funds on Treasury Bills account. This has also been a period during which the Government have bought sterling for sums much in excess of the weekly offer of £1 million. This again means a considerable inflow of funds to the market. With money released on Treasury Bills account and with increased amounts set free from Government's sterling purchases, how is it that there has been no alleviation of tight money? This is Anomaly No. I. It is known that exchange banks have not been taking any great interest in Treasury Bills for a good many months. The continuance of short-term Bills has, therefore, made no difference to the cash position of these banks. On the other hand, it is the exchange banks which have secured the largest share in the sterling sales made by the market to the Controller of the Currency. The significance of these two developments is that, on the one hand, there has been no outflow from the exchange banks and that, on the other, there has been a considerable inflow. Yet, it is the exchange banks which have experienced a specially intensified form of stringency. This is Anomaly No. II. There are hardly any indications that demand for finance on account of trade has been any greater now than it was, say, two months ago. The total of loans, cash credits and bills in the weekly returns of the Imperial Bank fluctuates between Rs. 20 crores and Rs. 22 crores. This is barely 25 per cent. of the deposits. As against this, investments in government securities are nearly Rs. 48 crores, to which must be added Rs. 7½ crores representing the ways and means advance availed of by the Government from the Bank. The total of Government obligations in the *portfolio* of the Bank is thus Rs. 55½ crores as on February 9. The trade requirements are barely 40 per cent. of the amount invested by the Bank in Government obligations. This does not surely indicate any increasing demand for money on account of more active trade conditions. The position revealed in the case of the Imperial Bank may be considered to be generally true of that of the other banks. We have also made detailed enquiries in this matter and we have no reasons to think that the financing of trade has called for any additional funds in recent weeks. Trade has continued slack and has not made any special strain on the resources of banks. Yet, the demand for funds on the part of banks is as strong to-day as it would be in a period marked by intense trade activity. This is Anomaly No. III.

As considerable perplexity prevails in banking circles in regard to the causes of a persisting pressure for funds, it is necessary and useful to examine the possible explanations at some length. Stringency in January and February can, in general terms, be explained in reference to these two months representing the best "revenue" period in the financial year. There is, so to say, a transfer of anying like an extra Rs. 20 crores from the coffers of individuals to the coffers of the Treasury. A second explanation for the monetary squeeze in these two months is to be found in the necessity which has arisen for banks to cover up the over-bought position that they had built up in the period when the fate of the ratio was under discussion in the Assembly. The forward contracts then entered into have had to be met in this period and banks must have felt on this account a strain on their resources in India. A third explanation is that while exchange banks have been trading on a fairly small proportion of cash in the till, the Indian joint stock banks have maintained a larger cash balance. Till a year ago, the Imperial Bank allowed cash credit facilities against government securities; and Indian banks used to have limits fixed up under some such arrangement, the unused portion of the limits being equivalent to cash or resources of a like character. The Imperial Bank has stopped these facilities. The result is that Indian banks maintain a far larger cash balance, of which a portion is necessarily lent out as interbank call money. The exchange banks do not make a like provision as, at a pinch, they could always draw on their London offices by selling T.T. These developments have been responsible for the materialising of a situation in which Indian joint stock banks are always lenders of short-term money and exchange banks have come to rely on such call deposits for emergencies. Any developments calculated to reduce the volume of call deposits lent out by Indian banks are, therefore, apt to tighten money conditions. The steady rise of giltedge values in the last six weeks has induced a greater activity on the part of Indian banks in government securities. To the extent that a proportion of the funds usually available in the call money market has been diverted to giltedge, the surplus funds knocking about in banking circles have undergone an appreciable shrinkage.

A fourth and immediate cause for the monetary stringency is the special character of gold shipments that have taken place in recent weeks.

Of the exports made during the past month, only a portion represents shipments out of the stocks held in the banking and bazar circles of Bombay. A substantial proportion is accounted for by the accelerated stream of gold that has flowed in recent weeks from upcountry parts. One estimate places daily arrivals from the mofussil at 25,000 tolas to 30,000 tolas. Against these arrivals, substantial transfers of funds should have been effected from Bombay to upcountry centres. Money so despatched to the mofussil takes quite a long time to find its way back to the money market proper. The recipients of these funds in the mofussil would, presumably, spend a portion in paying taxes and a certain proportion in paying off old debts and retain the balance to be spent in the succeeding months for their necessaries of life. It has always been noticed that once funds leave the money market and reach the farflung districts, the return is delayed and is usually in dribblets. In the closing months of 1931 and the opening months of 1932, the heady outflow of gold from the mofussil was accompanied by a transfer of funds from money market circles to distant inland towns. This necessitated rapid and repeated expansions of currency. As the funds came back from the mofussil, there was contraction of currency. It was then noticed that while expansion was in sharp and quick stages, contraction was a slow and gradual process. We are now having a replica of that phenomenon.

It is true that the market has sold considerable amounts of sterling to the Government and received, in return, heavy payments in rupees. That portion of the payments which represents shipments of gold from Bombay stocks may be deemed as being still retained in banking circles. But that portion of the payments which has been sent upcountry means a definite shrinkage in effective circulation of currency. Thus, while the nominal gross circulation has not been affected, the volume of currency available to the money market has certainly been appreciably reduced. If, as a result of this factor, stringency is experienced, the developments in this regard do not call for a rise in the Bank rate but for addition to the supply of currency in the same way as in 1931-32. The apparent stringency revealed by the Imperial Bank's low cash balance is not a case for the rise in the bank rate but a case for Government action on right lines. In the ways and means programme which was laid down in he budget speech of the Finance member on February 28, 1933, the position in India would have been smoothly met if the remittances to the Secretary of State came to £21 millon in the entire year. Actually, however, the Government had remitted £35.2 million up to February 10; including the remittances since February 10, the total sterling purchases might now be anything like £36 million. That is, the remittance programme has been exceeded by £15 million, while in the next six weeks, another £6 million to £9 million may be bought in the open market. There is thus every likelihood of the Government exceeding their original estimate by over £20 million.

The cash balance with the Secretary of State has increased by this amount. At the same time, the cash balance in India has been adversely affected to the extent of about Rs. 27 crores. If, owing to special circumstances, remittances to the India Office are in excess of estimates, the resultant position would be that the ways and means machinery in London would be functioning with extra smoothness and the ways and means machinery in India would be functioning unsatisfactorily. There can, however, be an automatic way of adjusting the working of

,, 10	...	5.03⅛	77.65	137s. 1d.
,, 12	...	5.04	77.40	137s. 2d.
,, 13	...	5.03⅛	77.12	136s. 11d.
,, 14	...	5.03½	77.09	137s. 5d.
,, 15	...	5.04 15/16	77.28	137s. 5d.

The dollar has gone merrily on its downward course during the week, the cross rate rising from 5.01⅜ to 5.04 5/16. It looks as though the American authorities are meeting with less difficulty in their programme of taking up the cross rate. The fall in the dollar has also been accompanied by a fall in the franc from 77.93 to 77.09 in relation to the pound. Britain may, for the time, have the satisfaction of finding a fall in the franc rate to compensate the rise in the dollar value of sterling. But the principal problems of Britain particularly, and of international finance in general are no nearer a solution at the end of this week than at any earlier period since Mr. Roosevelt made his decision to revalue the dollar at 59.06 cents. It is obvious that, so long as movements of gold are free, the present position can continue without any impressive denouement being precipitated. During the week, the violent movements of gold, to which reference was made last week, have continued in about the same measure and, in fact in an even more impressive way. It is reported that on February 8, 7 tons of gold arrived at Croydon by air liners from France Holland and Switzerland. On the same day bar gold valued at 3 million dollars was shipped from Southampton to New York. On February 12 a British ship sailed from Southampton on Saturday with nearly £50,000,000 in gold bullion and this brought the total of gold shipped in six liners from Southampton in the last eight days to £56,252,000. At Liverpool, gold bullion to the value of £6,500,000 was shipped in the liners *Versus* and *Laurentic* and the Anchor liner *Caledonia* sailed from the Clyde with gold value at £165,000.

From all this one might be tempted to think that France and the gold standard countries have indeed put in no obstacles in the way of the withdrawals of gold from their central banking institutions. But it is obvious that they cannot afford to continue this for long; and there is evidence that the gold standard countries, and particularly France, are bestowing much thought on the means by which such withdrawals might be checked without exposing themselves to the charge of having abandoned the gold standard either in part or in toto. The Air Mail papers refer to increasing complications in the procedure adopted by the Bank of France in meeting the demands for gold made on them. It is understood that the Bank of France is paying out only gold of .009 fineness instead of fine gold. It will be remembered that France had always insisted on the delivery of .0996 fineness; and there is no reason to assume that the bank's stocks of fine gold are depleted and that the Bank is not in a position to deliver this fine gold on demand. And it might also be recalled in this context that the insistence of the Bank of France on getting only fine gold led to complexities in 1930. The Bank of England's stocks were depleted at that time; and the efflux of gold from England to France was checked by the capacity of the London refineries, to convert standard gold into fine gold. In view of the earlier history of the fineness of gold tendered by central banks and in view of the reasonable presumption that France has got stocks of fine gold still left with her central banking institution, the present practice points to the beginning of the restrictions that are yet to come on the withdrawal of gold from the Bank of France for the purpose of export.

It is also reported that the Bank has adopted a policy of procrastination in the delivery of gold to those who have applied for it. For instance, one who applies for gold on Friday or Saturday is told that gold cannot be had till Monday and even Monday often becomes a somewhat uncertain date, with the result that one cannot enter into commitments on the basis of obtaining supplies of gold from the Bank on a stipulated date. This interference with the free functioning of the gold standard must add to the prevalent feeling of uncertainty and strengthen the belief that sooner or later France would feel impelled to abandon the gold standard.

On the top of all this comes the news that the French bank rate has been increased as from February 8 from 2½ per cent. to 3 per cent. No one can help interpreting the increase in the bank rate as an attempt to check the withdrawal of gold from France particularly to the United States. The deflationary significance of a rise in the bank rate will not also be lost on any one, as such deflationary effect, as this higher bank rate may have, would tend to bring internal price levels in France and in the United States more into line. Though changes in price levels might seem far-fetched, yet it is certain that the higher bank rate will discourage the movement of gold.

It is significant that during the week Dr. Colijn the Dutch Prime Minister gave the assurance in the Upper Chamber on February 8 that Holland would neither abandon the gold standard nor reduce the gold content of the 10 guilder coin. Dr. Colijn is reported to have declared that the Government would continue to reject all monetary experiments as the consequences would be incalculable. It is certain that even in the face of the dangers which Mr. Roosevelt's policy portends to them, the gold standard countries are yet unwilling to abandon gold. And it is, therefore, necessary to enquire whether, short of the abandonment of the gold standard, it would be possible for France Holland and their friends to devise a scheme by which the efflux of gold, that has been happening during these days and which threatens them in the days to follow, can be prevented.

In this respect a very useful suggestion has been thrown by a correspondent of the Financial News who says that the gold standard countries might among themselves agree to impose an embargo on the export of gold to countries which are not on the gold standard. This would mean that foreigners would not be able to withdraw gold either from France directly or via Holland. The remarks of the writer of the *Financial News* are worth quoting here :

"It is believed in usually well-informed quarters that the question of an embargo on gold exports to countries which are not on a gold basis is under consideration in official French quarters. Should an American demand assume large dimension, it is possible that France and the other gold countries will decide to take defensive measures without suspending the gold standard. By agreement they might impose an embargo on gold shipments to all countries which are not on a gold basis. Internally their notes would remain convertible into gold, but the export of gold would only be permitted if the consignment were dispatched to the central bank of a country on a gold basis. By such means it would be possible to prevent direct American withdrawals as well as withdrawals via Holland or Switzerland.

"Admittedly, it would still remain possible to buy francs and withdraw gold, leaving it on deposit in France. To do so would, however, involve practically the same risk as to hold franc balances, for it is highly probable that, if and when France abandoned the gold standard, hoarded gold would be called in at par. The embargo on American gold withdrawals could therefore be made practically water-tight."

CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) *Indian Capital—Indian Management—for the benefit of Indians.*
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering:—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

MOTOR CARS - - -

NATIONAL INSURANCE BUILDING,
7, Council House Street, Calcutta.

BUY

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 89/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 3¾ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 2 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3 per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 3½ per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

For further particulars please apply at any one of our Branches.

PUBLICATIONS OF THE LEAGUE OF NATIONS

Just out WORLD ECONOMIC SURVEY, 1932-33

348 pages ... ... Price: bound in cloth Rs. 5 8 0

The Survey for 1932-33 begins with a description of the revival of economic activity in the autumn of 1932 after the Lausanne Conference and covers the period up till the close of the first session of the Monetary and Economic Conference at London twelve months later. The story is thus brought up to the end of July 1933.

As in the previous Survey adequate use is made of statistical information regarding prices, production, international trade, public finance, wages, employment, profits, etc. collected from all over the world by the Economic Intelligence Service of the League of Nations. Despite the wealth of material thus made available, the Survey, like its predecessor, is a clear and connected story of recent developments valuable to the specialist for its scope and accuracy, and equally to the layman because of its clarity.

The American banking crisis, the movement towards reduction of hours, the situation regarding international indebtedness, the magnitude of agricultural stocks compared with current production, the decline in international trade, the recent rise in prices and recovery of production, are among the subjects of topical interest surveyed in this volume.

WORLD PRODUCTION AND PRICES, 1925-32

155 pages ... ... Price: Rs. 2 12 0

This volume contains an analysis of the changes in the world output and stocks of raw materials and foodstuffs, in the world's industrial activity and, finally, of price movements and relationships. It includes the index number of world production of raw materials and foodstuffs calculated by the Economic Intelligence Service of the League and international index of industrial production, together with abundant statistical material, *e.g.*, national industrial production indices for some 20 countries, data comparing production of investment and consumers goods, and indices of activity of some 15 important groups of industry in a large number of countries.

The chapter on prices contains an analysis of the movement of wholesale prices in various groups of countries; comparisons are made between the evolution of gold and sterling prices, raw materials and finished products, international and domestic goods, investment and consumption goods, etc.

The chapters on production cover the years 1925-1932, and, where possible, the first quarter of 1933. The discussion of price movements has, where figures were available, been brought up to May, 1933.

MARKET REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Feb., 15.

There was no outstanding development in the Stock Exchange during the period under review—presumably due to continued profit-taking. Government Securities were distinctly easier, while in sympathy with better commodity markets firm conditions have obtained in Jute Mills shares. Business in cotton Mills shares has again fallen off while some revival of interest was evidenced in coal shares. Among miscellaneous Industrials Electricals and Engineering issues have maintained their brighter appearance while the selling pressure in sugar group appears to have been arrested. In spite of very satisfactory Auction Sales in Calcutta and in London Tea Shares, in the majority of instances, ruled quiet.

Government Securities.

It is difficult to account for the easier conditions now obtaining in the gilt-edge section of the Stock Exchange, in spite of cheap money, the further fall in Treasury yield during the current week and the rumour of an impending loan.

3½% Government Paper, which suffered most adversely, was marked down to Rs. 84-12 owing to continued liquidation by nervous holders and in sympathy with the Government Paper long-dated Loans have also marked back. Medium-dated issues, however, met with some demand, but here also less interest was shewn. Near-dated issues remained unchanged and only a smal business was put through.

Towards the close a steadier tone prevailed and 3½% Government Paper improved to Rs. 85, 4% Loan (1960-70) to Rs. 99-14 and 5% Loan (1945-55) to Rs. 114-9. 3½% Loan (1947-50) changed hands up to Rs. 95-12 and 5% Loan (1940-43) kept steady round Rs. 107-4 with buyers over. The Bank rate was unchanged at 3½ per cent. Any serious fall is unthinkable in this section. On the other hand higher prices are anticipated.

Fixed Interest bearing Securities.

Jute Mills Preference shares were dealt in at steady rates while a number of Tea Preferences changed hands in small lots at about last levels. Among Industrials, Bengal Telephone Preference kept steady at Rs. 14-1 and Burn & Co. (6% Pref.) at Rs. 98 while Kumardhubi Engineering (Pref.) have crept up to Rs. 47 B. I. Corporation (Pref.) remained unchanged at Rs. 116 while Associated Hotels have sagged to Rs. 78 Titaghur Paper (Pref. Rs. 100 Paid up) were marked at Rs. 133 and Bengal Timber (Pref.) at Rs. 135-8.

Among Cotton Mills Preference Kesorams were placed at Rs. 105-12 and New Victorias at Rs. 3-12 while among Coals Burrakur (Pref.) changed hands at Rs. 117.

Only a limited business was put through in Calcutta Municipal and Port Trust debentures. 5% (1958-88) Calcutta Post Trust accounted for a few deals round about Rs 106-8 while 4% (1909-39) changed hands at Rs. 100-7. 4% (1933-50) Calcutta Municipal debentures were quoted at Rs. 99-5 and 4% (1912-42) at Rs. 100-4. No business of any note was reported in Industrials issues while among Jute Mills 5½% (1911-47) Union Jute were mentioned at Rs. 104.

Other Industrial Stocks

Imperial Bank's fully paid up issues remained steady round Rs. 1,238 as a result of Bombay buying while no business was reported in Contributories. Bank of India changed hands at Rs. 104-8 and Central Bank's shares at Rs. 23-12.

Among Light Railways, although there are still buyers for 3½ per cent. guaranteed issues, Mymenshing Bhairab Bazar (rebate) were the chief feature of interest, which after a long interest were marked up to Rs. 85. Hoshiarpore-Doab remained steady at Rs. 81 while there are sellers of Arrah-Sasaram at Rs. 64 Howrah-Seakhala at Rs. 62 and Mymenshing Bhairab Bazar (guaranteed) at Rs. 78.

The improvement recorded in this section during the last week has not been maintained and business has again fallen off. Bengal Nagpore (ordy.) however kept steady at Rs. 18 and Keshoram (ordy.) at Rs. 3-8.

Since we reported last, this section has shewn some revival of interest and in several instances rates improved, although the general trading still continued on a restricted scale.

There are buyers of Amalgamated at Rs. 14 Bengal were marked up to Rs. 236 Bokaro and Ramgur to Rs. 8 Burrakur (ordy.) to Rs. 14 Equitable (ordy.) to Rs. 21 New Beerbhum (ordy.) to Rs. 12 and Rewa to Rs. 12-14. Pench Valley kept very steady at Rs. 34-4, Raneegunge at Rs. 41-10, Katras Jherriah at Rs. 28-8, Nazira at Rs. 7-4 and Senda at Rs. 10.

Among low-priced stocks Bhalgora were in strong demand and business was reported up to Rs. 3 on dividend rumour. Burra Dhemo remained unchanged at Rs. 4-7, Aldih were in some request up to Rs. 3-4, Minto were quoted at Rs. 3-8, Samla advanced to Rs. 2-12 and Talcher kept steady at Rs. 1-9.

Latest report from the Coalfields indicate that there has been a fair demand for coal during the week for all grades.

It is now believed that the distant outlook of the industry is not without possibilities although the delay in the progress of Restriction Scheme, the expected official announcement regarding the coal freight surcharge on long distance traffic and lastly the low rates offered in the tenders for Railway Coal had the depressing effect on the market.

Commodity markets rule very firm during the period under review—9 Porters Hessians were marked up to Rs. 10-6 on better enquiries from consuming centres while raw jute displayed more strength owing to firm upcountry advices and on account of small arrivals. In the Stock Exchange Jute shares have maintained a cheerful tone and there was a general buoyancy. The speculative issues Howrahs and Kamarhattys were moved up to Rs. 54-12 and Rs. 560 ex-dividend, the new high levels and a fairly large business was put through. The feature of the week has been the definite improvement in the prices of investment stocks owing to the fact that Mills are reported to have taken advantage of the disparity between the prices of Hessians and Raw Jute and to have made satisfactory forward sales. Reports of Companies that have been issued recently also provide a very satisfactory reading and rumours are current in the market about good forthcoming dividends of several Companies.

Albions were marked up to Rs. 262, Alliances to Rs. 330, Anglo-India to Rs. 365, Auckland to Rs. 190, Barnagore changed hands up to Rs. 152, Ballys improved to Rs. 172, Belvedere were quoted at Rs. 375, Budge-Budge at Rs. 333, Caledonian at Rs. 510, Dalhousies at Rs. 362, Delta at Rs. 365, Gourepore were marked up to Rs. 378, Gondalpara to Rs. 830, Kankinarrah were dealt in at Rs. 466, Kinnison at Rs. 648, New Central at Rs. 374, Orient at Rs. 215, Standard at Rs. 330 and Union at Rs. 450.

A fair business was reported in Electric Supply Corporation shares at steady rates. Agra Electrics were quoted at Rs. 101, Ajmere Electrics at Rs. 8-8, Bareilly Electrics at Rs. 11-4. Bengal Telephone (ordy.) changed hands steadily at Rs. 14-2. Rawalpindi Electrics were dealt in at Rs. 18-4, Upper Jumna Valley at Rs. 8-4 and U. P. electrics at Rs. 124.

Although prices kept fairly steady in the majority of instances, profit-taking was noticeable in several cases. Arthur Butler advanced to Rs. 6-4 while Burn & Co. (ordy.) receded to Rs. 186, Britannia Building & Iron have not maintained their last levels and Indian Galvanizing and Indian Standard Wagon (ordy.) were easier. Kumardhubi Engineering and Marshalls, however, kept steady.

Selling pressure, it appears, has at last been arrested and in sympathy with the improvement in the prices of the refined articles, rates in several instances advanced to a certain extent. Balarampur kept steady at Rs. 11-4, Carew & Co., at Rs. 16-8, Cawnpore (ordy.) improved further to Rs. 31 and Samastipure to Rs. 8-12, Champaran, New Savan and Rayan remained unchanged.

Nothing of any particular interest falls to be reported in this section. A fair amount of business was registered in Calcutta Landing and Shipping round about Rs. 8-10, Indian General Navigation & Rlys. (ordy.) also recorded a deal at Rs. 78 Bengal Paper (ordy.) were marked at Rs. 70 and Titaghur Paper (ordy.) at Rs. 15, Midnapore Zemindary (only) kept steady at Rs. 61 and Murree Brewery at Rs 164. Ganges Rope were marked at Rs. 201-8, Indian Wood Products at Rs. 27-12 exdividend while Burma Corporation were marked up slightly to Rs. 9-6.

Although Tea Shares, in the majority of instances, have lost ground due to apathy of investors in spite of the excellent prices realised in auction both locally and in London, the undertone remained one of confidence and better prices are expected when reports for the working of 1933 will be available and next season will commence in May.

MADRAS STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Madras, February 14.

The securities market in Paper and 1960-70 loan was erratic on heavy Bombay selling. Three-and-a-half per cent. Paper touched Rs. 84-11 at one time but recovered to Rs. 85 at the close. 4 per cent. 1960-70 Loan, which was dealt in up to Rs. 100-6, reacted to Rs. 99-12 closing better. A good business passed in the long-dated tax-free securities. tax-free securities. Business in all securities was restricted with investment support not so noticeable as in recent weeks. All Mysore loans were dealt in at quotation rates, with sellers over for 4 per cent. 1953-63 Loan.

Amongst Port Trust and Corporation Debentures, 4 per cent. Madras Corporation 1949 debentures changed hands at Rs. 93. One or two deals were reported in United Nilgiri 1943 Debentures at par, whilst the preference share market was more active with transactions in Deccan Sugars at Rs. 116 and Spencer 8 preferences at Rs. 10-8.

Banks were firm. Imperial Bank Fully Paids were done up to Rs. 1,240, **Indian Banks Big shares up** to Rs. 96 and Small up to Rs. 19-4. There was a good enquiry for Central Banks around Rs. 24¼. Statt-Aided Banks noted deals at Rs. 15.

Electrics were firm. Trichy Srirangam Electrics met with business at Rs. 150. Though at the close buyers marked down their bids owing to the death of Mr. Seshasayee, the Senior Member of the Managing Agency firm in an air accident, Vellores were wanted at 8 annas premium with none offering. Madras Telephones changed hands at Rs. 11-4.

Cotton rills were weak with the exception of Buckinghams which were steady at Rs. 181. Coimbatores were lower at Rs. 45 and Kaleeswaras at Rs. 275 with transactions at these levels done.

Cement section was firm. Indian Cements improved to Rs. 300, Bundis to Rs. 27-4, Shahabads to Rs. 290 and Katnis Rs. 282½. There was good business passing.

Sugars were quieter with the exception of Deccans which improved to Rs. 267. India Sugar after being done at 1 anna premium are offered at par.

Rubbers were dull whilst teas improved. Peermades jumper to Rs. 27. United Nilgiris to Rs. 98 and Peria Karamalais closed at Rs. 40.

In the Miscellaneous stction Burma Corporations were popular at Rs. 9-4 and Tata Steel Ord. at Rs. 53.

BOMBAY STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Bombay, February 15.

Securities:

The giltedged market was quiet. Government 3½ per cent. Papers ruled rather dull. The rate from its last close at 85-5-6 touched lowest at 84-2 and closed to-day at 84-14. Disturbing political happenings on the Continent had quietening effect on London sterling securities.

Shares:

Despite the market remaining closed for three days out of six, due to Shivratri settlement and arrest of Pandit Jawaharlal, much bullish activity was witnessed in all industrial sections. Textile concerns only were being ignored. Latterly declaration of a 30 ad interim dividend for Andhra Valley ordinaries had general bullish effect on all industrials.

Cements and Tata Steels show particular strength. Prices are tabulated below:—

	Close on 8-2-34	Highest	Lowest	Close Toady
Bombay Dyeing	755 0	755 0	752 8	753 12
Century	194 6	194 6	189 6	189 6
Nagpur	232 8	235 0	232 8	234 6

JUTE AND JUTE GOODS

JUTE

During the current week raw jute market has ruled quiet but steady with fair to moderate interest being shewn at declines. Early in the week the market was easy on long liquidation and due to easier conditions prevailing in the goods market. Later, however, the undertone became firmer, both mills and shippers showing good interest. The highest and lowest of jute futures were Rs. 32-6 and Rs. 30-4 per bale respectively.

Early in the week business in ready Pucca bales was done at Rs. 27-10 and Lightnings at Rs. 24-2. As the week progressed prices firmed up. London was buyer at £16 and mills were also interested at declines. Consequently there was a gradual improvement and business in February first was done at Rs. 28-8, and for March at Rs. 29 with buyers over. Business in loose jute was done early at Rs. 4-8 and 4-0 for Indian Jat LR and XLR. Towards the finish the same was done at Rs. 4-12 and Rs. 4-4 per md. Although the quantity of business at last rates has not been large but sellers are fully reserved and not in a mood to discount prices at the moment.

Arrivals in Calcutta during the week have remained stationery in the nearhood of 9 to 10 thousand maunds a day. Stocks are estimated at about 10 lacs of maunds which are higher than last year. Considering the improvement in other commodity markets and a continued steady tone of hessians and heavy goods the price of raw jute is comparatively cheap and a rise is therefore quite justifiable.

JUTE MANUFACTURES

Early in the week the market was easy and values were showing a declining tendency. The undertone of the market was however fully steady and did make itself felt towards the finish. Hessians nine porter was ruling at about Rs. 9-14; early in the week the same towards the close is quoting at Rs. 10-1. Eleven porters had a rise which was larger when compared to nine porter. The opening and closing quotations for the week are Rs. 12-10 and Rs. 13, Heavy goods market that was very lethargic all along has shown no less improvement and there has been a rise of 8 to 10 annas per hundred bags. The following were the opening and closing quotations of the week:—

	Opening		Closing	
	Rs.	A.	Rs.	A.
B. Twills	23	12	24	4
Liverpools	27	0	27	8
Heavy Cees	24	0	24	8

Very long business was done by the mills in the course of the week for all positions near and forward and the sales were fully absorbed by the Bazar. There was good enquiry for hessians and heavy goods and business was done by export houses at advancing rates. It is believed that the stock position of hessians in U.S.A. will show, improvement at month end as compared to that of the previous month.

The steady market conditions in U.S.A. with a general bullish undertone had a healthy effect on the markets in India. The rise in jute goods at the moment is certainly not overdone but is likely to have a small reactionary trend. But the undertone is quite healthy and purchases at declines are therefore desirable. Taking the larger view of the market there is more room for a rise than a fall.

COTTON AND COTTON GOODS

COTTON

(*By Wire*)

(From our correspondent)

Bombay, February 15.

New York May from its last close at 12.25 touched highest and lowest at 12.54 and 11.90 respectively and closed yesterday at 12.23. Liverpool May came down from 6.28 to 6.23 moving between 6.48 and 6.20. Likelihood of controlling speculation in all commodity markets and opposition to Bankhead Bill, which may jeopardise its passage, caused heavy selling. Locally the market is very sensitive operations being rather infavour of a decline.

Fully steady conditions prevailed in the Cotton market during the earlier part of the week. Broach April/May touched Rs. 216 following the rise in New York July to 12.56. Towards the close easier conditions have prevailed Broach April/May quoting at Rs. 210 New York July at 12.20 Liverpool at 6.30 Egyptian Sakellaridis at 8.90.

The easier conditions have been due to the natural profit taking at the rise. The effects of the Bankhead Bill also have been discounted by the market and the unsatisfactory conditions prevailing in Central Europe during the current week had a nervous feeling in London and Liverpool markets. The profit taking and stop loss sales in U. S. A. have induced the trade to buy and the liquidation has therefore been well absorbed. It is also rumoured that the Govt. of U. S. A. is postponing their sales of Cotton until the middle of the next year. Should it be so the market is likely to recover soon from the present bearish effect.

The condition of the Indian Cotton is quite satisfactory. According to private estimates the outturn of Broach Cotton originally estimated at 375,000 now looks like 275,000 bales. Surti originally 175,000 is now 135,000 and Gujerat 350,000 now looks like 275,000. The arrivals of main Broach line show a good grade and a staple better than last year and this quality should last until the end of the month.

BULLION

GOLD

(*By Wire*)

(From Our Correspondent)

Bombay, Feb. 8.

Prices moved quietly during the period. London gold rate improved from £6-16-9 to £8-17-5. The franc rate gradually declined from 77.93 to 77.09. Sterling dollar rate fluctuated between 5.01 7/8 and 5.04. Local ready rate touched highest and lowest at 34-0-9 and 33-14.

Gold.—Comparatively easier conditions have prevailed in the gold market during the current week without heavy fluctuations. Local gold has ruled in the vicinity of Rs. 34 per tola and London near sh. 137. There have been heavy shipments of gold from India the total during the past two weeks being over Rs. 10 crores. Stocks in Bombay have considerably fallen, the latest estimate being about 3 lakhs tolas. Sovereigns have also declined in sympathy with gold to Rs. 21-8.

London Air Mail Week—

On the 24th January the gold reserve against notes in the Bank of England amounted to £190,817,659, showing no change as compared with the previous Wednesday.

Although large amount of gold was available in the open market, it was not quite on the same scale as the previous week. The demand from the usual quarters was good, but at times the premium in the price has ruled smaller.

SILVER

(*By Wire*)

(From Our Correspondent)

Bombay, February 15.

Some sort of rehabilitation of silver is being contemplated in America. It is uncertain yet what shape it will take, but probably silver will be accepted at a premium against payments of surplus agricultural exports. During the week silver markets everywhere ruled steady and recorded fair advance yesterday. Rumour of a reduction in silver duty is an additional bullish factor locally. London silver spot from its last close at 19¾d. touched 19 11/16d. and closed yesterday at 20¼d. New York spot rate came up from 44½ to 45 1/8 cents. Local rate for ready moved narrowly. From its last close at 55-13 it touched lowest and highest at 55-12 and 56-3 respectively and is being quoted at noon to-day at 55-14. But March rate, due to rumours aforesaid, shot up from 57-13 lowest on Saturday to 59-14 yesterday.

Silver.—After ruling easy during the earlier part of the week the market towards the finish has considerably improved. London Silver has improved from 19⅝d. to 20/14d. while the local market has improved from Rs. 58-4 to Rs. 59-12 for the Fagan settlement. The rise can be attributed to Chinese buying and bear covering in India. Runners are again afloat that import duty on silver is likely to be reduced and has been responsible for the rise in Indian markets. It is expected that American Government's next move will be the rehabilitation of silver in some form or the other and this also had a bullish feeling in the market. Stocks in Bombay and Calcutta are steadily declining the same being estimated at about 7,500 bars the daily offtake improving at 75 bars.

The market was somewhat unsettled during the last week of January. At first the tendency appeared easier, selling by China and the continent more than sufficing to meet a moderate demand from the Indian Bazaars and speculators. Reports from Washington of further legislative proposals with regard to silver were followed by a rise in the Shanghai exchange; mainly on buying on China account, prices rose fairly sharply on the 29th Jan. being quoted at 19.9/16d. for cash and 19.5/8d. for two months' delivery, representing rises of 1/4d. and 5/16d. respectively as compared with the quotations of the previous working day. The market was fairly steady on China support, but New York was inclined to offer in the afternoons although sales were not pursued.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 22nd ult. to mid-day on the 29th ult.:—

TEA

Sale No. 33 was held on 12th and 13th February when 9,000 packages of tea with export rights, and 7,000 packages of dust internal consumption, were sold at an average of annas 0-10-11, 0-7-3 and 0-9-5 per lb.

The offerings were rather indifferent, with poor appearance and cup quality. There was a stronger demand when compared to the previous week. Common teas were firmer and dearer. There was very good demand for tea for internal consumption. The market opened very strong but was easier towards the close. Dusts were active, values advancing by ½ anna.

The following are the full particulars of Sale No. 33:—

Teas with Export Rights

	1934	1933	1932
Offered	8,958	20,200	17,700
Sold	8,809	18,999	17,460

SUGAR

The market during the current week has been steady without much change in values. There is not much demand from the consuming centres and the prices are however fully steady due to small stocks and they too being in strong hands.

Bombay market has ruled fully steady due to advance in values now quoted by Nivas. The Java Exchange is further unfavourable and has been responsible for the rise.

GRAINS AND SEEDS

WHEAT

During the week under review the wheat market has ruled fully steady May Beta having touched Rs. 3-2 per md. The rise has been due to shortness of stocks in the local market and unfavourable weather conditions in the wheat growing districts. The tone of the market is quite healthy and values are likely to go up.

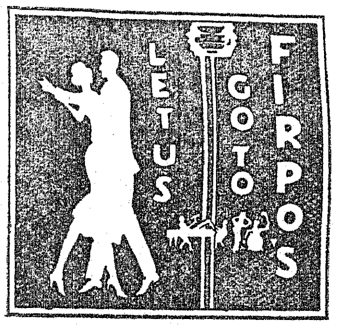
DINE AT FIRPO'S

Editorial Comments



LET US GO TO FIRPO'S

JUTE COMMITTEE'S REPORT

The report of the Bengal Jute Enquiry Committee which was appointed in the beginning of last year has at last been made available to the public. The Committee was originally requested to submit its report before May 1st, 1933. Possibly the object of the Government of Bengal in asking the Committee to submit its recommendations before the beginning of May last year was to decide its line of action in respect of the 1933-34 crop.

* * *

Owing to the delay in getting the Committee to submit its report, nothing was done to regulate the 1933-34 crop, with the result that, in spite of an urgent necessity to curtail production, the present season's crop threatens to be in excess of world requirements. It is only due to the enormous output of jute this season that the raw jute section of the trade is not in a position to take any advantage of the improvement in American Trade, though the manufacturing side is reaping the full benefit of it. The disparity between the price of manufactured jute and the raw material has of late become so marked that even *The Statesman*, normally disinclined to be definite in matters concerning, jute, referred to it as "glaring disparity" in its editorial note of yesterday.

* * *

As was anticipated by those who intimately knew the *personnel* of the Committee, the report is not unanimous. There is, however, nothing surprising about this lack of unanimity displayed by the members of the Committee. The differences in their out-look, and in the stand-point, from which they viewed the problems placed before them, were so fundamental, that unanimity was from the outset entirely out of question, and it is futile to regret the lack of unanimity. What is surprising and regrettable is that Government should have made this the ground for delaying action still further. In our opinion the Government are not justified in delaying for a single day the adoption of such measures as may be necessary for the amelioration of the conditions of the cultivators of Bengal in the light of the material that has been placed before them by the Committee.

From the point of view of both the grower as well as the trade the most important matter dealt with in the report, regarding which immediate action on the part of the Government is called for, is the question of the regulation of production and we make no apology for postponing our comments on the various other points discussed by the Committee and taking up the question of regulation of production first. We do so not only because this is a matter which is going to determine the trend of prices in future but also because the time of sowings for the next year's crop has almost over-taken us. If the cultivators start their sowing operations for the coming season without regard to the requirements of jute during the next year, they will have again committed a serious blunder, for which the whole province may have to pay very dearly.

* * *

Times without number it has been urged by us that owing to certain characteristics peculiar to jute it is possible so to regulate its production as to ensure a fair margin of profit to the growers of this commodity. We have said in this connection that the measures which have been successfully applied in the case of the jute fabric can be applied to jute fibre. The most important aspect of the whole problem that the Committee was asked to examine was the question of the regulation of production. Both the Majority and Minority reports agree that there is need for such regulation and both the reports suggest propaganda as the means to be employed to achieve this object. Though the recommendations are similar there is considerable difference in the arguments employed to reach the conclusions.

* * *

Whilst the majority are absolutely opposed to compulsion, the Minority, whilst rebutting all the arguments employed by the Majority against compulsory restriction of production, abruptly, and for reasons not clearly stated in the report, came to the conclusion, that the regulation of production should be achieved by propaganda alone.

* * *

We believe that there is not much chance of propaganda being successful in controlling output. If the jute cultivator is to be saved from the disastrous consequences of over-production some form of compulsion will have to be employed. Those, who have signed the Majority report, show great concern for the liberty of the cultivators to sow as much as they like and whatever they like. We fail to understand how the representatives of the jute mill industry could honestly advance this argument, when they themselves did not hesitate a year back in invoking the aid of the Government to bring pressure on certain mills to fall in line with their programme of production. Who can deny that it was only due to the fact that the head of this presidency made it clear that the Government will use all its resources to prevent a disruption that the dissenting mills could be induced to agree to restricted output?

* * *

Khan Bahadur Azizul Huque has pointed in his report that the cultivators themselves showed great enthusiasm for compulsory restriction.

* * *

The Committee had the advantage of having in its ranks men intimately connected with the jute trade. We fail to understand how, in spite of the information that was available to them, they could say that restriction has been achieved in a substantial measure. As every one in the jute trade knows, the consumers are carrying more than twelve months' supplies in their godowns.

* * *

That in the face of facts, facile assertions should have been made about the success of restriction suggests clearly that the procedure adopted by the Government of Bengal is none too sound. The attitude of the Government itself is highly compromising. No one, we are sure, will have the temerity to suggest that a reasonable unanimity in conclusions and recommendations could be expected from a body so composed as the Jute Committee. We have been never in love with the representative principle when committees of public enquiry are involved. A public enquiry is initiated in the interests of the public.

It is too much to expect that a gathering of the representatives of discordant interests would agree on fundamentals. The Banking Enquiry Committee showed to some extent the defects of this procedure; and the Jute Committee have confirmed our opinion in this matter. The proper course of action would be to entrust the enquiry to a knot of public men of acknowledged capacity and interest. We are not prepared to believe that the Government of Bengal could not have adopted such a course or that they expected unanimity from a committee representative of the various interests. That after appointing such a committee the Government should plead lack of unanimity as a ground for delay in action only lends colour to the public feeling that restriction was from the outset destined to be sabotaged.

1933-34

The Annual Market Review for 1933 of Messrs. Premchand Roychand & Sons, just released to the public, maintains the excellent standard for which it has earned a high repute. The year covered by the Review—which is aptly described as one of "thwarted endeavour"—was marked by some retrogression in the international sphere and by some constructive effort and consolidation in the domestic sphere. The survey of a period during which developments of an international character have been numerous and exciting has, necessarily, meant the allocation of more than usual space to the narration and elucidation of world events. As a concise and compact summary of the latter, the following description merits study :

> "All the major causes of the world slump are still in operation including low commodity prices, abnormal tariff and exchange restrictions, fluctuating currencies, extensive unemployment, war debt commitments, maldistribution of gold reserves etc. On the whole, it cannot be claimed that the spirit, and practice, of international co-operation has made much progress ; on the contrary, not merely have many international conferences proved fruitless ; there has been a weakening of the international organisations upon whose existence and smooth functioning international consultation and co-operation have come to depend. As the outcome of the Geneva discussions on her Manchurian adventure Japan resigned her membership of the League of Nations ; the pre-occupation of the United States with its own economic and monetary difficulties led to the formulation of policies which rendered inevitable the collapse, or at best the adjournment for an indefinite period, of the World Economic Conference ; while it was reserved for Germany following its political unification under Nazi leadership, to break up the Disarmament Conference and emulate Japan by leaving the League".

* * *

The "Policies and Prices in the United States" are dealt with at some length. The writer of the Review remains more or less non-commital as to the possible outcome of President Roosevelt's ambitious attempt to carry out economic planning on a scale that has never been tried anywhere outside Russia. But he does not leave us in doubt of the awe which inspires his attitude to the American experiment. He acknowledges the "courageous and masterful leadership of President Roosevelt". Wonderingly he refers to America as the "greatest economic laboratory in the modern world". And he has certainly great admiration (whether he has sympathy is another matter) for the President's technique and tactics which he describes thus :

> "In his ruthless pursuit of this programme, President Roosevelt has displayed equal readiness to 'try out', or to 'scrap', to try another, and to keep on trying. There is apparently no economic or financial principle he is not prepared to challenge, and to flout, in order to achieve his aims. Scornful of traditional thought and practice, his inspired opportunism is at the same time his greatest strength, and his greatest weakness. That some of the experiments in progress have led to the production of explosive compounds, exerting unexpected repercussions, and eliciting violent protests from the individuals and interests disturbed, is hardly surprising ; nevertheless, the experiments continue, apparently with the complete approbation of the nation as a whole".

* * *

The Review records the improvement in the British trade and monetary position as judged by such indices as budgetary balance, the volume of unemployment, the actual and relative value of export trade, the industrial output, and the partial rectification of the balance of trade; and it declares that the United Kingdom now occupies a stronger position, and can view the future with greater confidence, than at any stage since the beginning of the slump. Turning to India, the writer takes a mildly optimistic view on an examination of government finance, trade and industry. But the future of industry is bound up with a revival of confidence of investors in industrial enterprises. It is the faulty and expensive system of management that accentuates this lack of confidence. And, in this connection, a forceful plea is put forward in the following words for an immediate modernising and reforming of Company Law :

> "The Indian Companies Act is largely obsolete. It stands in need of drastic amendment in order to bring it into line with modern practice, and to give to the investor the widest measure of protection and security that the law can provide. That would in itself be a powerful stimulant to the revival of confidence. We are constrained to remind the Government of India that more than seven years have elapsed since the assurance was given to the public that the Act would be amended. We recognise that these have been anxious and crowded years in many other ways. Nevertheless seven years in a long time to wait for action, especially when at the end thereof there are no signs of the matter being taken in hand. When this question is tackled, vested interests, however clamant, should not weaken the determination of the Government to deal resolutely with the worst side of the Managing Agency System."

* * *

The Review is positively opened to the continuance of the managing agency system and declares that industrial enterprise can be directed far more efficiently by the ordinary joint stock system of a Board of Directors functioning through a capable executive. Pending reform of the Companies' Act, the Indian investor can be cured of his shyness only if, under proper auspices, investment trusts are created which would proffer the assurance that wide diffusion of investments and skilled selection reduce risks in this class of shares to a minimum. We are glad to learn from the Review that an investment trust has been registered in Bombay; and, while offering it a rousing welcome, we would like to express the hope that its success would inspire the inauguration of a few more trust companies planned on right lines

and directed by men of standing, probity and knowledge. Only thus could the small investor and the investor in the mofussil be induced to part with his savings and make them available for productive enterprise.

COCONUT PALM IN SOUTH INDIA

Agricultural distress is both acute and widespread in all the provinces of India during the course of the depression. But it has also visited Travancore, Cochin and Malabar which are known, from ancient times, to be immune from famine and want; and coconut plantation, which is hardly developed on any organised scale but forms the mainstay of 10 millions of population, has fallen on evil days. Not only exports to foreign countries have been checked by import tariffs on the part of some of these countries but the home market has been subject to invasion and capture by neighbours. Though scattered among numerous small holders, coconut cultivation has been developing steadily in the past to meet the increased demand of a rising population and demand from the oil milling industry in Bombay. This progress in cultivation will necessarily be stopped not only owing to the fall in the prices of coconut and copra but also due to the large-scale imports from Ceylon dumped at unremunerative prices.

* * *

One can well understand the anxiety of Ceylon to tackle the Indian market and the methods employed in this direction. With her increased acreage under coconut and the consequent large output, she must needs seek market elsewhere; and she naturally finds India not only near at hand but circumstances favourable for a great push here. The following table illustrates the startling rise in the imports of coconuts, copra and coconut oil into India from Ceylon:

	1930	1931	1932	1933
Copra cwt. ...	1,361	22,000	292,508	486,000
Coconut oil cwt.	73,759	188,947	511,252	358,000
Coconuts Nos. ...	19,438	47,459	6,912,416	3,700,000

A commission was appointed which pointed out the great potentiality of the Indian market for Ceylon coconut and coconut products. The Commission sent a special officer to visit India and report on the prospects for Ceylon coconuts. He concurred with the Ceylon Coconut Commission's verdict and in addition recommended the establishment of a Coconut Propaganda Board on the lines of the Tea Advertising Board to propagandise and popularise Ceylon coconuts in India and the collection of a cess for this purpose.

* * *

While the Southern Island was thus invading the markets of South India and was making every effort to gain a stronger foothold, the policy of the Government of India would appear to favour it with special advantages in the effort on which it has set its heart. The import duties on copra and coconut oil were steadily being reduced year after year enabling Ceylon to carry out her dumping campaign with renewed vigour and energy. The following table shows the consistent manner in which the import duties were brought down to the present low levels.

	1929 Rs.	1930 Rs.	1931 Rs.	1932 Rs.	1933 Rs.	1934 Rs.
Copra Cwts ...	23	17	16	11½	10	9
Coconut Oil Cwts ...	30	26	21½	16	15½	12½

* * *

Travancore, being the most important of the countries affected by the Ceylonese "drive," was soon brought to a sense of the danger of the situation. And the Travancore Chamber of Commerce so early as August, 1930 brought to the notice of the Government of Travancore the necessity of protecting its premier industry. The Government of Travancore either turned a deaf ear or were slow in moving. Attention of the Government of India was also drawn to this matter through the Assembly when the Ottawa Pact and the question of Imperial Preference were being considered. The case of Travancore was so well-represented that the *Government consented to keep the import duty on coconut* oil without further reduction which was not promised in the case of copra on which they were contemplating further reduction to help Bombay. While it was argued on the side of the Government of India that the reduction was necessary in the interests of the consumer, Ceylonese interests, for their part, contended that they were entitled to preference in the Indian market considering Ceylon's import of cotton piecegoods from Bombay. They also went to the length of threatening that piecegoods from Bombay will be stopped unless her copra finds a ready market in India. One can easily understand that both the contentions are untenable. There are a score of instances where the Government, ignoring the interests of the consumer, have given protection to home industries to the extent of even 200 per cent., for example, cotton, iron and steel, sugar and salt.. As regards the second argument, the extent of loss of market in Ceylon as a result of Ceylon's threat will amount to Rs. 23 lakhs whereas, if the same threat were to be made from the affected areas in South India, it will mean over Rs. 130. Moreover the opposition of the Travancore Chamber of Commerce to the intended reduction by 5 per cent. of the duty on copra is more understandable than the plea in favour of Bombay capitalists. Doubtless, it passes one's comprehension why the Government should show so much solicitude in favour of capitalists against stricken rural population, and in favour of a foreign competitor as against an important section of an important Indian province.

* * *

And yet that is what the Government have done. Early in 1934, as the table above shows, the duties *have been reduced from Rs. 10 to Rs. 9 in the case* of copra, and from Rs. 15½ to Rs. 12½ in the case of coconut oil. One can only deplore the utter callousness and disregard of the Government to the interests of the agricultural population. It is to be hoped that the Government will not long continue in this policy, but afford the necessary protection to the premier industry of a large mass of agricultural population in the South.

FEATURE"
CAR

THE Wolseley range has become famous for its "special feature" cars. No matter what model you intend to buy, a Wolseley is always more interesting both to own and to drive. The special features you get in a Wolseley incorporate the very latest development in modern motoring. Synchromesh gears are, of course, on all models. Controlled Free-Wheeling is obtainable on the Hornet, giving a clutchless "change," while free-wheeling and automatic clutch in the case of the "16" and "21/60" afford you the easiest gearchange in the world. Further special features administer to your safety, comfort and economy. Many of them are only obtainable on a Wolseley model. Every Wolseley is, by reason of these features, a more delightful car to drive.

RURAL PROGRAMME

The address of Mr. Vaikunth L. Mehta at the United Provinces Co-operative Conference represents the quintessence of the experience and practical knowledge which this zealous devotee to the cause of co-operation has gathered in a career dedicated to the movement. Rural welfare has bulked large in the speeches and pronouncements of provincial governors; and it may be hoped that the agricultural interests will be vouchsafed more than lip-sympathy. If an economic programme devised in behalf of Rural India is to be earnestly evolved and actively pursued, Mr. Mehta's speech will be found of inestimable value as offering clear-cut and practical suggestions. He does not beat about the bush nor stop to polish his phrases. He goes to the heart of the problem and enumerates the urgent needs sharp and straight. Preliminary to any comprehensive plan being worked out, a vigorous campaign for the liquidation of illiteracy should be inaugurated in all parts of the country. The educational system should be so designed as to suit the limited resources of India and as to fit in with the plan of life and standard of living of the masses. The abolition of usury and the relief of the peasant from the burden of debt should occupy a foremost place in any plan of rural uplift. Examining the agricultural indebtedness of a province like the United Provinces, it is found that of a total debt of Rs. 125 crores, over Rs. 75 crores is secured on the mortgage of land. Is this not a clear enough indication that the establishment of a system of land mortgage banks would be a sure method of affording relief to a large proportion of the indebted classes? These matters are inter-linked; and remedies can be effective only if steps are taken, at one and the same time, for the establishment of a provincial mortgage bank and district banks, the modification of the laws relating to usury and insolvency, and the regulation of the operations of money-lenders.

* * *

Mr. Mehta, as a genuine and *bonafide* co-operator, is solely concerned with the problems and issues that arise within the movement itself; and his mental make-up is such that he, as by instinct, eschews all other interests. Nevertheless, he felt that he should refer to the ratio controversy as he was convinced that the higher ratio had worked havoc with the fortunes of agriculturists. Mr. Mehta said:

> "A former chairman of the Bombay Provincial Co-operative Bank, the late Mr. B. F. Madon, warned the co-operators seven years ago of the very serious troubles that were in store for them if Government persisted in adhering to the eighteenpence ratio. Every word of what he prophesied—on the basis of facts and figures—has unfortunately come too true, and these seven years have seen agriculturists sink to lower and lower depths of poverty, indigence and indebtedness than even he could have foreseen."

* * *

The rural interests of the Punjab are, it is no matter for surprise, amongst the most stalwart supporters of a lower ratio. Some people are inclined to think that with the passing of the Reserve Bank Bill, the ratio issue is dead. The Currency League may be dead; but the agitation for securing a ratio suited to the intrinsic conditions and needs of India must remain alive till the popular voice is heard and justice is meted out.

DOUBTING DEMOS

In an examination of the relation between social ends and political theories, we were content to point out in last week's article that the world has reached one of those stages in political evolution, when old ideas have lost their appeal, and institutions, which functioned smoothly and efficiently in the past, are falling into disrepute. We brought out the relation at every period of history between social needs and political theories. It is difficult to be precise, unless one is inclined to be dogmatic, about the logical and chronological relation between social needs and political forms and theories. Political forms, which are to no inconsiderable extent, the result of force, exert their influence on men's conceptions of social needs and current political theories. But the rough correspondence between social needs and political theories is nevertheless, indisputable. And the present chaos of political thought may be justly attributed to the haziness that obtains alike about the needs of society and about the means by which it may achieve them.

* * *

Hitherto there was no question about a democratic form of government being the best available means not only of achieving social ends, but also of ascertaining and clarifying them. Doubt in demo-

cracy is the root of the chaos that we now witness. Most of the ardent democrats now profess to a new disillusionment; and it is natural that, if amongst such sceptics, there are some who have it in their power to stay the onward course of democracy, the democratic element in modern government will be that extent be minimised. And if it is true, as is quite plausible, that democracy is the means by which the demos clarifies social needs, then every check to democracy will render social needs more nebulous than before. The first effect of political agnosticism is to weaken democracy and obscure the desires of the demos.

In any examination of current social needs and the means by which they may be achieved, it is necessary to be clear about what democracy means. First of all, it is an essential principle of social relationship, namely, that every man is the equal of every other. Now that ignorance of the principle of political equality has been uprooted all over tha the world, the democratic principle can be interfered with only on sufferance. A dictatorship either rests on force or on the willing consent of the people. The people become more powerful than the dictator, or, if the people change their mind about the value of dictatorship, the dictator will go the same way as the absolute monarchs of old or of ministers who have lost the confidence of the legislature. Political equality is no longer a principle, but a fact, though other inequalities may serve to obscure it or to reduce its practical consequences.

It is significant that no dictator, or any supporter of dictatorship has revived any divine right of dictators or even a theory of a super man. They have mostly inveighed against some class or other as oppressors of the people; and, if anything, dictatorship has all along sought to strengthen democracy as a principle in the abstract.

It is thus democracy as a form of social organisation that is now suspect. In this view, it has three district aspects (1) that of a safeguard against the distortion of social ends and against the harnessing of the organised forces of society to the accomplishment of less than completely social ends (2) that of a provision for the regular and automatic formulation of social nteds and (3) that of the means of realising such ends, once they have been formulated.

No verdict for or against democracy can be considered just, unless it has been judged from these three standpoints. It is quite conceivable that, condemned on one or two counts, democracy might yet seem indispensable considered in its third aspect. Once it is found indispensable on any one consideration, say, a safeguard against distortion of social ends, the other two functions, namely, formulation and execution, might follow as incidental to safeguarding.

Historically, democracy arose only as a safeguard against oppression, for which we have chosen the more generic, but less comprehensible term, "distortion of social purposes." In its efforts to safeguard the people from oppression, a popular legislature comes to formulate certain demands. These demands, originally of a negative kind, assume a more and more positive character; with the result a government which is subject to the vigilant control of a popular legislature gradually comes to be directed by it. The government becomes ,in a sense, the governed, and it is quite understandable that unless the new governors, namely, the legislature, have the capacity to govern, chaos must come again.

Aristotle had his theory of cyclic changes in forms of government, each normal degenerating into its corresponding abnormal. What is relevant here is the possibility, he indicated, of polity degenerating into democracy (to use the modern vocabulary, democracy into anarchy) and then paving the way for monarchy and a fresh spin round the cycle. It is quite possible for detractors of democracy to argue that what Aristotle indicated as a possibility is now a reality, and dictatorship is obviously the next step. It is unwise to import into this subject a fatalism which Aristotle could never have intended.

What one might readily grant about democracy is that it has ceased to work as smoothly as before. And in a discussion about the why of it, it is no use begging the question. A more thorough examination of the working of democracy from the three standpoints already mentioned would alone enable a reasonable conclusion. Despite all the imperfections of democracy, the ignorance and excitability of the mob, the corruption of elected legislators, the strength of party feeling, etc., etc., no one can contend that democracy in its negative aspect of safeguard against oppression is a failure. Few would think of posing seriously the question whether human society has outgrown the need for the protection which a democratic form of government has afforded in the past. Those who have the power, howsoever derived, to get to the helm of state, are no less human than the tyrants who goaded their subjects to rebellion and were thus the first progenitors of democracy. It might be that a Mussolini or a Hitler is too cultured to think of fiddling while Rome is burning; but democracy is a safeguard as much against wilful, as against unwitting, oppression. These supermen need the advice of others; and how are others better fitted to advise unless they understand the minds of the common people and are prepared, or forced, to represent the wishes of the people?

There is thus no escape from democracy except a gamble on the probity or wisdom of an individual or a class. And who can call upon society as a whole to engage in such a gamble? Safeguard is thus indispensable, and we have also seen that from mere safeguard flow the other two functions, namely formulation of popular demands and the direction of governmental efforts to achieve them.

The crisis in modern democracy has occurred through the difficulties experienced in the formulation of social needs and the direction of governmental policy. The new social ideals for which the masses would like to utilise the organisation of the State are not fully acceptable to those who have till now remained in power. So long as representative institutions were ready to lend their vociferous support to schemes beloved of the ruling classes, they had no reason to find fault with it. The smooth working of representative democracy as we have known it in the past depends on popular demands being acceptable to the classes which are at the time the natural leaders of the people. Once a divergence occurs, a deadlock results; and it cannot end, unless either

NOTICE

Printing—Contract for

Tenders are invited for the contract for the supply of Books and Forms and execution of printing work etc., for three years commencing from the 1st April, 1934. For Schedule giving details, apply to the Superintendent of stores, S. I. Railway Co., Ltd., Negapatam, remitting Rs. 10/- per copy which is not refundable nor will the copy be sent by V. P. Post.

2. Tenders are due by the 12th March, 1934.

3. Specimen sheets of the standard Books and Forms may be inspected in the office of the District Traffic Superintendent, Madras.

4. In the case of Standard Books and Forms standardised on white printing paper alternative rates on badami paper should also be quoted in the column provided in the schedule.

the people succeed in supplanting the old leaders, or the latter consent to espouse and execute the demands of the latter. In so far as democratic electorates are able to change the legislators and send to Parliament men, who would act as their true spokesmen, the transition is rendered easier. But by the same token, the ability of the representatives of the old order to retain their place in Parliaments is a fruitful source of clash and deadlock.

* * * *

It would be at variance with facts to suggest that the deadlocks, in which most representative democracies find themselves, are due solely to the obstructionism of the classes which have till now been in power. For even in countries, in which the voter is not restrained in any extra-constitutional manner, the popular verdict has been grossly indecisive. With the result that the deadlock remains unresolved and the ruling classes are tempted to resort to dictatorship, if only as an administrative convenience. But the supporters of dictatorship forget that it is but a crude solution of the problem with which we are confronted. If dictatorship is a solution to deadlock, it also prevents that natural growth of popular opinion, without which there can be neither popular support for dictatorship nor a decisive majority in

* * * *

a representative sovereign legislature. It should suffice here to note that the machinery of representative democracy has been clogged by two unfavourable circumstances: (1) that the electorate has not yet made up its mind on outstanding questions, or in the language we adopted at the start, social needs have not been clarified in the popular mind; and (2) that the classes, which have till now been the natural leaders of the people, are hostile to the purposes which, by all tokens, are, taking hold of the people's mind. Dictatorship is the combined result of popular indecision and anxiety of the ruling classes to frustrate the new social ideals.

* * * *

There is yet no warrant for assuming that democracy or representative government is inherently unworkable. What is happening at present is that the electorate is divided, and with it the legislature; and those who see danger to their own interests in persisting in democratic forms of government find in the deadlock the invaluable means of discrediting democracy as a whole. The people may yet make up their minds; and the leaders may still agree to be the executors of a popular policy; and it is not difficult to conceive of a responsible Cabinet carrying out the behests of a socialist majority in the Legislature with the same smoothness with which European governments waged "national" wars in the early years of this century. And when that time comes—and it will, if dictatorship does not impose its dull weight on the popular mind—representative democracy will resume its smooth working. What the new social ideals are, which are the source of the present troubles, we shall endeavour to examine in a latter article.

SIR C. C. GHOSE

In the vacancy caused by the death of Sir P. C. Mitter, Sir Charu Chandra Ghose has been appointed. An apter choice could not have been made. In him are combined all the pre-eminent attributes—we would have liked to use the Sanskrit word *lakshana*—needed in one occupying so exalted an office. He had acted as Chief Justice on four occasions. On the Bench, he showed remarkable independence of outlook and sturdiness of understanding—in fact, too independent sometimes to suit the Powers-that-be. Ripe and rich experience, varied knowledge of men and things, detached yet intelligent understanding of world affairs are the assets which Sir Charu's colleagues would find invaluable.

(*Continued from page 350*)

ways and means in the two centres if, to the extent that the Home Treasury is in receipt of surplus funds, that surplus is transferred to the London branch of the Paper Currency Reserve and currency created thereagainst in India, thus setting free the funds which will make good the loss caused by the excessive remittance. If the Government do not, in such a situation, utilise surplus sterling assets for expansion of currency, it will be tantamount to a deflationary policy. On an earlier occasion, £5 million out of the surplus remittance was transferred to the currency reserves but no expansion of currency took place as a result of this operation. Against the addition of £5 million to the reserves, *adhoc* securities for an equivalent amount of rupees were cancelled. If the failure to expand currency on that occasion was an unsound policy, much more unsound is the persistence in such a course in the situation now created by the flight of funds from the money market proper to upcountry parts. We would strongly urge the Government to desist from this frequent recourse to the Imperial Bank for ways and means advances and to adopt the more scientific and straightforward course of expanding currency and thereby putting themselves in funds through the addition of surplus sterling resources to the London branch of P. C. R. Such an expansion of currency is called for in order to rectify the present position of a curtailed supply of currency. Such an expansion would remove the constantly disfiguring item of the ways and means advances from the Bank return, as this facility must be used only as an occasional recourse. This expansion would restore the cash balance of the Bank to the level at which it would stand but for the deflationary operations of the Treasury.

Exchange has been very firm, with 1s. 6 1/16d., as the rate for February-March T.T. Banks were sellers at 1s. 6 3/32d., for Air Mail O. D. This is tantamout to the rate for readv being 1s. 6 5/64d. The strength of exchange is due to stringency of money and gold exports.

The closing rates are: 1s. 6 1/16d., February-March T.T.; 1s. 6 1/32d., April-May T.T.; and 1s. 6d., June-mid-September T.T.

Bills may be quoted: 1s. 6 3/16d., up to March; 1s. 6 5/32d., April-May; and 1s. 6⅛d., June onwards.

Money was in great demand and business was done at 3 to 3½ per cent. Onemonth, twomonth and threemonth deposits were quoted 1¼, 1¼ and 1½ per cent. respectively.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE BANK OF MYSORE, LIMITED.

We report that we have examined and compared the Balance Sheet of the Bank of Mysore, Limited, as at 31st December, 1933 and above set forth, with the books and accounts as kept at Head Office and with the certified returns from the Branches and have obtained all the information and explanations we have required.

In our opinion such Balance Sheet is drawn up in conformity with the Law, and exhibits a true and correct view of the state of the Bank's affairs, according to the best of our information and the explanations given to us and as shown by the books and returns of the Bank.

The pomp and pageantry that marked the Silver Jubilee celebration of the Hindusthan Co-operative Insurance Society early this week may be taken to symbolise the proud and confident answer of awakened Bengal to the challenge of those of the other provinces that have gone ahead in commerce and industrial enterprise. This resolute and vehement determination that Bengal, too, shall come into her own in the economic sphere was manifest in the eager and intent faces of the numberless Bengalee men and women of all ranks and of all shades of opinion who had foregathered in the Town Hall to pay homage to an institution, which, remaining a hundred per cent. Bengalee, has won All-India repute. It also seemed to me that those men and women were all mentally making and fortifying the resolve that even as Bengal's talent has proved equal to the rearing of an insurance office to sturdy proportions, the same talent should now find opportunities for enriching, strengthening, pioneering and expanding the economic activities and enterprises of this province. I, for one, would readily concede that while many have made colossal wealth from this province, the children of the soil have not been successful in securing any considerable wealth for themselves. There is a good deal of truth in the wag's remark that jute is Bengal's wealth but not the Bengalee's.

* * *

That a situation of this kind is intolerable is a matter that should be recognised by one and all in fairness and justice to the local population. If Bengalees have woke up to the full measure of opportunity that should be theirs, and if they are now determined to avail themselves of it with vim and vigour, those who have been earlier in the field in this province must be prepared to reconcile themselves to the new situation and be prepared to let the Bengalees have a share of the profits that till now remained their monopoly. This is eminently a case where discretion is the better part of wisdom. To belittle the efforts of young Bengal to assert her rights or to seek to cling to whatever rights the foreigner might have already secured will only result in bickerings and misunderstandings which cannot be to the good of the aliens in the days to come when provinces are to enjoy autonomy.

* * *

It was Mr. B. K. Basu and Mr. C. C. Biswas who, through a pungent interview they gave to the press, stirred Bengal to a realisation of its plight in this regard. It is true that the movement thus started has tended to emphasise provincial differences and put a premium on parochialism. It is also true that many extreme statements have been made which are calculated to wound the susceptibilities of the men of other provinces resident in Bengal. But the early stages of an awakening of this character are bound to cause unbalanced and frenzied claims on the one side and truculence and disgust o nthe other. But time as the great healer can be expected to deal with both these extreme manifestations. The main fact of which we all should take due and proper note is that Bengal is astir; there is a new spirit abroad; the leaders and followers alike are agreed and determined that every step necessary should be taken to assert the rights and claims of Bengal to a place in the Sun of commerce and industry. An equally important fact is that it is neither graceful on the part of the foreigners, nor will it do them any good, to place obstacles in the way of the realisation of Bengal's ambition.

* * *

The propaganda, which Charu and Bijoy set afoot, has, while taking undesirable forms in certain respects, done a great deal of good. Look at the number of Bengalee youths of good and rich families entering the business career. The sons of Sir Binode Mitter and of Sir Nipen Sircar are definitely committed to industrial enterprise; and they have started well and under good auspices. Look at the number of cotton mills that have been started in recent years, sponsored by Bengalee firms. Look at the enthusiasm evinced by Bengallee *badralok* in the village regeneration schemes of Sir Daniel Hamilton. Look at the rapidly growing membership and ever-increasing status and scope of usefulness, of the Bengal National Chamber of Commerce. Look at the college professors taking a keener and more live interest in extra-academic problems of finance and economics. Look at the number of financial journals that have been started. All this is a heartening sign and encouraging symbol of the new vitality and the new grit. All this must gladden the heart of those who wish Bengal well.

* * *

It is not as though a community of upstarts wish to build airy castles in a land of chronic penury. The Bengalees have talent of a high order, enthusiasm and fervent devotion to any coveted object. Bengal as a province has the richest economic potentialities. And, in point of practical contribution to India's economy, Bengalees have a record to be proud of. In making this statement I am having in mind especially the incidents leading up to the inauguration of the Tata Iron and Steel Company. Jamshedji Tata, the most honoured name in the annals of India's industrial history, was responsible for making Indians realise the very importance of every advanced country cultivating the ambition to own its own steel works. He first taught us the glory of this ambi-

tion. And he also took the steps necessary for India realising this ambition. While Mr. Tata, and, through him, Bombay are thus assured of a resplendent place in the romance of steel in India, Mr. P. N. Bose, and, through him, Bengal are entitled to honour and recognition not less marked. It was Mr. Bose who led the Tatas to the marvellous treasure—house of iron ore, without which no steel industry could have been started. And he was the beacon-light at a time when the prospectors thought that India had no ore worth mining on a commercial scale and were about to give up their efforts. His discovery changed the whole aspect of Tata's investigations. What might have ended in a fiasco was saved by him at the critical moment. The business aspct of pioneering must be set down to the credit of Mr. J. N. Tata and his sons. The technical aspect of pioneering redounds to the credit of Mr. Bose.

* * *

The story in this regard as told by Mr. Lovat Fraser in his book *Iron and Steel in India* bears re-telling:

> "The result of the inquiry proved that the various deposits situated at some distance from each other were not continuous but mere 'pockets' and that there was not enough ore in Lohara hill to justify starting iron works. So, reluctantly they had to come to the conclusion that the Chanda project must be given up, and they asked Mr. Tata to inform Government that it was not possible to start an iron and steel industry in India. . . . . At this stage one of those chance incidents which make or mar all great enterprises stirred their energies afresh. Sir Dorab Tata went to Nagpur to see Sir Benjamin Robertson, then the Chief Secretary of the Central Provinces Administration, to inform him about the conclusion they had arrived at.
>
> The Chief Secretary happened to be out, so he drifted rather aimlessly into the museum opposite the Secretariat to await his return. There he came across a geological map of the Central Provinces printed in colours. He noticed that the Drug District near Raipur, about 140 miles from the Chanda area, was coloured very darkly, in a hue which was meant to indicate large deposits of iron. In a case in the museum they found a specimen of very good iron ore from the Drug area. . . . .
>
> When Sir Benjamin Robertson reached his office, Sir Dorab reluctantly told him that it would be impossible to work the Chanda ore unless cokeable coal could be obtained near at hand. We went on to ask about Drug, and told him what he had seen in the museum. Sir Benjammin produced the records of the Geological Survey, and it was found that fifteen years earlier Mr. P. N. Bose, a Bengali, employed as a survey officer, had gone through the district looking for iron. In a report published in 1887, he had mentioned that the neighbourhood was rich in iron ore."

Rich as was the ore in this discovery, an even better ore in a more favourable environment was made available to the Tatas by the same Mr. Bose.

> "One morning the Tata firm received a letter from Mr. P. N. Bose, whose name was already familiar to them by reason of his report upon the iron deposits in the Drug District. Mr. Bose explained that he had retired from his post in the Geological Survey, and was now in the employment of the Maharajah of Mourbhanj. . .
>
> Mr. Bose, with the concurrence of the Maharajah, informed Messrs. Tata Sons and Co., that he had found very rich deposits of iron, and invited them to send representatives to inspect the ore-fields. His statements were on the whole below the mark. In the story of the industrial development of India, Mr. Bose is assured of permanent mention. His enquiries were the prelude to the discoveries of Mr. Weld in the Drug area and now pointed the way to still more promising results."

* * *

The essentials for the successful inauguration of a modern steel manufacturing industry are, I suppose, (1) suitable ore and other raw materials in adequate quantities and in close neighbourhood; (2) pioneers who are prepared to undergo all the trouble, and incur all the expense, involved in prospecting which, at best, is but a hazard; (3) sponsors who command confidence and have experience of organising a new industry; and (4) capital. (2) and (3) were furnished by the Tatas, and this may be set down as a plume in Bombay's cap. I have already proved that (1) was entirely due to the pioneering work of Mr. Bose. This should, therefore, be reckoned a feather in Bengal's helmet. I shall now proceed to prove that (4) was a contribution through the instrumentality of Bengal. The capital, which the Tatas set out to secure in the first instance, was in the vicinity of Rs. 2½ crores. The Indian capital market had not, till then, been tapped for a capital of this vast size. It was taken for granted that it was futile to try to secure the capital from domestic investors. The promoters, therefore, decided that most of the capital should be raised in London. How the negotiations fared in London is thus described by Mr. Lovat Fraser:

> "A preliminary prospectus was prepared and submitted to various financial interests in London, but unforeseen difficulties were encountered. There were differences about the degree of control which was to be entrusted to the representatives of English investors, A disposition seemed to be manifested to sweep the Tata firm aside. Far more disconcerting was the lack of interest shown by the London money market, which is always ready to pour capital into China, or Patagonia, or Timbuctoo, but shows a traditional unwillingness to invest in new enterprise in India. Sir Dorab, and Mr. Padshah, acting for the Tatas, had, moreover, come into touch with London during one of its periodical phases of depression. Money was very 'tight' and all fresh projects were looked at askance. The sum asked for was very large. It would have met with a doubtful reception at that moment had the works been projected for England; being for India, people buttoned up their pockets. Eventually there was one exciting period when about four-fifths of the required capital was actually promised; but the Syndicate fell through, and the enterprise again seemed doomed, and Sir Dorab returned to India."

* * *

This tantalising business went on for a year. London had to be abandoned as a hopeless prospect. The Tatas were thrown on to the Indian market. And a market, used only to tens of lakhs, was to yield hundreds of lakhs! Was this not a desperate and risky predicament? Yet, the Swadeshi movement which owed its inspiration and impetus to Bengal and whose fervour was sustained by the determination of Bengal, came to the rescue of the Tatas. A circular was issued, which was more in the nature of an appeal to Indians. This was followed by a prospectus which bears the date August 27, 1907. And, lo and behold!, there was instantaneous success—far more sensational than the promoters could have hoped for in their most sanguine moments. Thanks to the apt aid of the Swadeshi spirit, the Tatas could, without humiliating themselves by admitting Europeans as partners in the managing agency and control, secure all their capital needs from within India. The following passage from a lecture by Mr. Axel Sahlin will be read with intense interest:

> "From early morning till late at night, the Tata offices in Bombay were besieged by an eager crowd of native investors. Old and young, rich and poor, men and women they came, offering their mites; and, at the end of three weeks, the entire capital required for the construction requirements, £1,630,000, was secured, every penny contributed by some 8,000 native Indians. And when, later on issue of Debentures was decided upon to provide working capital, the entire issue £400,000 was subscribed for by one Indian magnate, the Maharaja Scindia of Gwalior."

Such is Bengal, Such is the Bengalee. When both are determined to achieve aught in the economic sphere, success is assured to them. Three cheers to Bengal! Three cheers to the Hindusthan Co-operative as the emblem and first fulfilment of Bengal's ambition!

* * *

There is a technique about the organisation of trade exhibitions which Indians have not fully mastered. Within my experience, I have come across only two Indian organisers who showed real ability, organising skill and broad outlook. Nearly twenty years ago, Sir T. Vijiaraghavachariar organised an Exhibition in Madras in first-rate style. Mr. Nalini R. Sarker's show as an appendage to the Calcutta

Congress of 1928 was likewise a most creditable affair. And, I know, Nalini had in mind the planning of a permanent Trade Exhibition. I do not know what has happened to it. It is time we realise fully the place of a complete exhibition in the advancement of national trade. Mysore has a permanent annual fixture. But what is needed is better organisation and more fruitful utilisation as between province and province as regards resources, talent and experience. Above all, the principal sponsors of such exhibitions must visit foreign countries and get intimate knowledge of how fairs are arranged in important centres like Paris and London. I have before me a prospectus of the 1934 Paris Fair. As an annual function, it is twenty years old. The exhibitors come from all countries and were no less than 8,000 last year. Exhibitions in India, while being expanded so as to pool together the resources of all provinces, must also establish contact, and develop reciprocal relations, with foreign exhibitions such as Paris Fair.

* * *

Even as the response from all provinces to distressed Behar has been more and more gratifying, the revelation about the extent of the damage and the vastness of needs for reconstruction has been increasingly alarming. Even a province like Madras, whose population is mostly made up of lower middle classes, has made a good showing. The "Hindu" Relief Fund now amounts to three-fourths of a lakh. The Bank of Mysore has contributed Rs. 5,000. The Mysore State has authorised all Treasuries to receive donations and remit them free of charge. The South Indians resident in Calcutta and suburbs have done their bit. A Tamil drama was staged the other day as a "benefit performance" ; and Rs. 2,000 was the box collection. When Mahatma Gandhi fixed Rs. 6¼ lakhs as the quota of Madras for the Tilak Swaraj Fund, a bare lakh was collected. The performances of South India on the present occasion is, by comparison, creditable. If a comparatively poor province could contribute a lakh, all-India must make up the crore which was the realisation for the Tilak Fund. Thank God, the response so far has been good. But the spirit of Mr. Keenan of Tisco, who, on learning full details, increased his donation from Rs. 500 to Rs. 2,000, is the spirit in which each one of us should stand by our sorely afflicted neighbours.

* * *

There is at once pathos and beauty in the *how* of Sir Provash Mitter's death. That, right to the end, he remained laden with work and weighed down with responsibility (oftentimes irksome) makes one feel that his life might have been spared a few years longer if for no other purpose than enjoying a well-earned rest. That he literally died in harness is, perhaps, how Sir Provash himself would have liked his end to come. He belonged to a school of politics which has never been popular in the country. To owe allegience to such a school, to proclaim it, and to remain loyal to it amidst popular disapprobation required courage and faith. And of Sir Provash it might be said that, whatever differences of opinion one might have with him, everyone should admit that he was sincerely convinced that it was his party of National Liberals who alone were pursuing the correct political policy and programme in the country. A moderate is generally understood as one whose qualities of head assert themselves over qualities of heart.. He is, therefore, calm, dispassionate, cool and collected in judgment. Fervour and emotion are anathema to him. Sir Provash, however, was the one moderate who had fervour in his loyalties, who was almost a fanatic in his cause. Moderation implies avoidance of excess and must, thus, prefer "lukewarm" to "warm". But Sir Provash was never lukewarm but ever warm in his championship of the Liberal cult and in his exposition of the Liberal policy.

* * *

In his death, Bengal has lost one whose vast knowledge of administration and the mysteries of Government machinery should have been one of the best assets in the future political *regime*. I have known him for nearly eighteen years; in the long ago, we worked together on certain pamphlets on Permanent Revenue Settlement. He had an infinite capacity for taking pains, a flair for figures, a keenness for comparative statistics, and a cheerful and helpful attitude towards everyone working with, or under him. Slightly pompous on the surface, he was simple and child-like once you come to know him. Many another, who has known him in his human aspect, will mourn the loss of one who made friends amongst all sections and bound them to himself by hoops of affection and regard.

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

OLYMPUS

(From Our Correspondent)

New Delhi, Feb. 14.

We are again in the grip of the Japanese controversy ; the Delegation, which came here to negotiate a treaty, is busy looking after the Japanese trade. Mr. Senda who has had a long experience of business in Calcutta is here to do the propaganda among the non-officials.

* * *

I will not say that any material considerations are influencing the judgment of our members. Generally they are free from these and try their honest best to promote the interests of the country.

* * *

Mr. A. H. Ghuznavi is again the champion of the cause of Japan. This finds him *opposed* to the Government. But this is a lapse which the Government permits him on tariff matters. Otherwise he is a stalwart supporter of the Government. He told the Government point blank that the Bill was giving Imperial Preference by the back-door. Such a remark from a nationalist might have led to a furious repudiation by Sir Joseph Bhore ; but, coming as it did from a friendly quarter, it was overlooked.

* * *

Mr. Senda was in the gallery and so also the Italian Trade Commissioner. They certainly know what is happening. The Government are determined to get the Bill passed by the 20th of this month and Government have the necessary majority for the purpose.

* * *

But one point will require serious notice as time goes on. Indian industries are at present being "protected" or "safeguarded" as and when the danger point is reached. Then counsels are taken in haste and some solution is found. No one can say whether by this the importer is hit, or the consumer is burdened or the industries are amply protected or inadequately protected. It is a gamble.

* * *

It is not in my line to forecast ultimate developments. I only chronicle matters of immediate interest. But I hazard the opinion that, sooner or later, it will be recognised that this patchwork will do no good. We should have an Economic Council ; we have to plan economic development ; we have to put the whole machinery of Government behind it ; we have to weed out the inefficient lot ; we have to think whether the best method is that of subsidy or of tariff protection ; we have perhaps to depend upon both. But somebody has to do hard thinking. There is the nucleus of thinkers in the Tariff Board (Members and ex-Members) but more can be added. Above all, Dr. Matthai must be asked to work out a plan, as soon as his hands are free.

* * *

A Government member like Sir Joseph Bhore, however able and administratively clever, is at sea in dealing with these problems. For instance, when Sir Joseph Bhore was confronted with the charge that British goods were altogether free from specific duties, it took Sir Joseph two minutes to realise what reply to give to Dr. Ziauddin Ahmed. Mr. Hardy rushed to the front bench with information and ultimately Sir Shanmukham Chetty gave the necessary lead.

* * *

All this only goes to show that, quite often, we may be all groping in the dark. The Government also do not place all the cards on the table. But they have a definite grievance. No information given to members of any select committee is safe. It is passed on to the press by some member or other. The anxiety of the members to please some press interest or other creates this situation.

* * *

There was a time—from the inauguration of the new constitution down to 1932—when no proceedings of the select committee were published. Then some M.L.A., started passing information on the help a particular news agency. The Government did not penalise this violation ; and so everyone in self-defence did it ! And now when members want information, the Government say they cannot give it because it all leaks out !

* * *

This is a wrong way of dealing with the situation. The press should be warned that it would publish these matters only at the cost of losing the press privileges ; and then all will stop. I bleieve in healthy convention to make parliamentary life yield proper results and I do not think any responsible journalist would object to the re-imposition of a convention which was previously honoured without any such unseemly episodes.

* * *

As for the Indo-Japanese treaty, it will be signed alright but not till the end of this month. It may be even later. The Japanese would like to delay matters to keep a watch over the doings in the Assembly. They declare that their Parliament is very angry over what is happening in India. They admit that their parliament has no power to disown the treaty. Diplomatic acts are not subject to ratification by the Diet. But an angry Diet can give an uncomfortable time to a Government and even turn it out.

* * *

The Japanese are careful diplomats. They do not want to say that the Tariff Bills give undue preference to the British and inadequate protection to the Indian industries. It is not their business. But

GODREJ

Prices Low - Quality High

Godrej gives you high quality steel equipment at low prices, because of scientific manufacturing on large scale. Godrej Work is the only works of its kind in India equipped with the latest costly machinery and engineering devices.

they feel that neither India is served nor Japan is helped while the Bills all along the line are conceived in the interest of British manufacturers.

* * *

And let me add that this is because Sir Samuel Hoare is actively and frequently intervening in Indian fiscal problems. He has not allowed Sir George Schuster even the liberty of equalising the import and excise duties on kerosene oil. The members of the Assembly did protest but the Government did argue that "on merits" they opposed this equalisation. And that the fiscal autonomy convention was not being dishonoured.

* * *

We have just learnt of the tall claim of a news agency that "it is in a position to set at rest all speculations" as regards the appointments to the key posts of the Reserve Bank. It may be right; it may be wrong. Anyway, it seems safe to say that it should be correct in a good part of its "story." But, apart from its knowledge of things yet to happen, it could have been more careful in the reciting of known facts. Sir Osborne Smith was not, as stated in that report, the Managing Governor of the Federal Reserve Bank of Australia; he was, I believe, the London Manager of the Commonwealth Bank of Australia. Nor need Mr. V. K. Aravamudha Ayangar, C.I.E., be grateful for the transformation of the suffix into the prefix of Rai Bahadur. Nevertheless, I do think that, despite the semi-official contradiction of this news, there are good reasons to lead one to believe that the list of new appointments furnished by the news agency is a very probable list. More than this, it is a very acceptable list.

* * *

Sir George Schuster is leaving India on May 3. The new Finance Member was, according to original plans, to arrive somewhat earlier. But the budget session of the Assembly and the carry-over of the budget work would make it undesirable for Sir George to leave earlier than the first week of May. Sir James Grigg would, therefore, be now arriving just in time to take over charge. Before Sir George's departure from India, he might announce the names of the Governor, Deputy Governors and, perhaps, of the Central Boards and local bodies, which means that Sir James will be able to issue the shares of the Reserve Bank in the monsoon months. By this week or next, the Reserve Bank will be an Act. By next cold weather, the Reserve Bank will be an accomplished fact.

* * *

The States Protection Bill has again emphasised the impotency of the present Assembly. It is all a farce. The Bill is bound to be passed. In return, the ruling princes are expected to signify early assent to join the Federation in sufficient number to allow of its inauguration according to Sir Samuel Hoare's time-table; and to agree to the new plan of control over the ports situated in Indian India. Recent revelations regarding Jamnagar Port call for urgent and imperative action. Dual administration of ports—some by British India and some by Indian India—places the latter at a great advantage and causes a heavy loss to the former. This cannot obviously continue.

"HILL-BIRD."

SOUTH INDIA

(From Our Correspondent)

Madras, February 14, 1934.

It is so difficult to escape the cricket atmosphere in Madras that the correspondent from the South might well be excused for opening this week's letter with a reference to the last test match. With many, who have been watching the game, so to say, through the immense length of wires and the tons of newspapers, it is perhaps, by now a distressing memory. With us who have lived through the four fateful days, it is a hectic time of hideous nightmares and wild dreams, not under the sheets, but occuring in the retina of the eye of imagination in a baffling alteration. Now that the Match is over, a lot of sob stuff has taken the place of lively speculation and pleasant hopefulness tempered though, by some well meant advice. One wonders whether Jardine led a band of cricketers or brought a handful of pedagogues to add to the many lessons that India is learning at the feet of her masters. Even Mr. Satyamurthi succumbed to the prevalent epidemic of mingled encouragement and admonishment to the Indian cricketers. Whatever Indians may think and say—in these occasions there is a form for the sake of which one shouldn't speak out one's mind—I hope Jardine does not flatter himself that he pitted his giant followers against a knot of urchins who need a lot of schooling to be fit for first class cricket. If he does, the facts are woefully against him. The team he faced contains, to my knowledge, at least five people who have put up a century against the best side from England; bowlers there are before whom M.C.C. have gone down like nine-pins; minor lights who have made light of English bowling and scored both in time and runs. True it is, Indian fielding often slackened, runs given away with a prodigal hand, catches missed, balls wrongly aimed, all pointing to a lack of zest. True it is, again, that English batting was steady, technically flawless, and fruitful in runs and Indian batting nervous, fitful, in most instances unreliable, setting the crowds on edge, often racking their nerves to a worse condition than their own. But what about the other side of the shield? How many stop to think of the missed catches, careless byes and boundaries that swept the fielder's palm and all that may be set against the English team?

Let us recall a few of the thrilling and chilling memories of the game. If on the first day England piled up the huge score of 163 for 1, the afternoon saw Amar Singh bring down English wickets, with no more ado than if it were a mere inter-collegiate match. The second day saw the Indian eleven crumble to pieces before the attack of Verity; but quite to the close came the champion bowler, to prove that he could charm as well with the bat as with the ball. The second innings of the English team lacked all reality, as it came in the place of a legitimate follow-on for the Indian team. Why Jardine chose to bat a second time is inexplicable unless it be that Calcutta taught the English skipper not to trail the wounded tiger. And as for the second innings of the Indian team, I am afraid that it has had no finer criterion of judgment than the crude one of mere results. I wonder if any one can say more about the performance of the Indian team than that they could have done very much better. That they did not do badly, it must be admitted readily. For, from the spectacular and from the artistic point of view, there can be no question that the Indian innings was by far the better. And even on the question of results, could it be so easily forgotten that in this game of vaunted chance and uncertainty, nearly every element of luck turned decisively against the Indian eleven? Jardine's lucky coin, so consistent in its turn in his favour, must perhaps be

struck out of the list of uncertainties. And with that sentient coin will go the worn wicket, the tired fielders, sent in to bat after a day's backing in the Southern Sun and all that chain of misfortune. But what about Nissar's illness and Naomal's injury, a hapless team batting one short in each innings? Give a value to every factor involved, and you will agree that this myth of having to learn from England is gone!

I agree, no doubt, that the Tests have shown up the weak points, as, indeed, any experience should. The team as such needs to stiffen up a great deal. There is something more than the uncertainty of cricket in the Indian captain going out for paltry runs, and the Yuvraj of Patiala lobbing an easy ball into the hands of the Wicket keep, when by all tokens he seemed well-set for a century. But few who regret this realise that India can win the Tests in spite of such defects. At any rate, I shudder to think of Indian cricketers hammering themselves into mere imitations of Jardine and Walters. Is it not bad enough that in other fields we try to suppress the national genius? Should it not suffice to provide Indian cricketers with more opportunity to see one another, to develop understanding, to find the means of each complementing another and to evolve teams in which no one would be harried with the thought of a rot and every one could afford to follow his own true bent, in other words, an Indian team Indian not only in the swarthy skin, but in the colour and brilliance of the display? If each man gives his best and the phenomenon of infant mortality kept away from the mat or the turf, I am content. Let the Tests go hang.

And now to topics more appropriate to these columns, of which, unfortunately there are not many.

The Madras Local Boards and Elementary Education Bill has emerged out of the Select Committee stage. There is little or no evidence of vigilant revision, except a score of dissenting minutes which altogether lack point. The majority are content to make changes of no consequence. It will be remembered that last time the question was referred to in these columns it was pointed out that the two points on which new legislation would be judged are the impetus given to the healthy growth of village panchayats, and the provision of district boards with an efficient executive free from traits of partisanship. But the Committee seem to have given their attention to everything but these two questions. The changes they have suggested refer to the establishment of standing committees, the utilisation of the Village Development Fund and the educational officer. In the opinion of the Committee the Bill does not go far enough in establishing standing committees for education, rural development, public health, etc.; and they recommend that the local bodies should be compelled to create such committees. Though the success of such a system would depend largely on the character of the *personnel* available, it is well to create bodies to whom one aspect of local government would be a matter of special concern. For such special responsibility would enliven members, who could otherwise be content with nodding their heads in the periodical meetings of the Board. Of the Village Reconstruction Fund, the Committee have said that the funds hitherto available for the panchayats should be devoted, to the same purpose for which the Fund has been instituted. And the Committee have expressed the opinion that it is not necessary that the Local Government should appoint an Educational Officer for every district Board and that it should suffice if the Government have power to do the needful in each case. This is quite understandable as Government have their own organisation for the supervision and direction of educational activity in all parts of the province; and reduplication of this effort is an obvious wastage of money and trouble. With all these changes, one might well agree. But it is ununderstandable that the Select Committee should have interfered so disastrously with the provision for Government conferring the appointment of an Executive Officer for the District Board; for the only reason adduced by the Committee is that a "provision in this form is unnecessary". Some of the dissenting minutes have very pointed comments on the attitude of the majority; and there is a growing volume of public opinion which urges that unless district boards are provided with an efficient executive head, who will have direct responsibility to Government and will be analogus to the statutory post of a Commissioner or a Chief Executive Officer, local administration will not be adequately safeguarded from the impact of local cliquishness. It is strange that one of the fundamentals of efficient government should have been so lightly brushed aside by the Select Committee. It is to be hoped that the Legislature will show itself more discerning and wise than the Committee to whom it entrusted the task of scrutinising the provisions of the Bill.

THE GATEWAY OF INDIA

(From Our Correspondent)

Bombay, February 14.

The plea for the cleansing of the managing agency stables is gathering greater and greater momentum and has become more and more insistent. Bombay knew that the Tariff Board report on the textile industry would contain frank and out-spoken comments on the managing agency system in relation to the cotton mill industry of this province. That Dr. Matthai and his colleagues were desirous of fully exposing the uses and abuses of this system was clearly indicated by the invitation that was sent to Mr. K. C. Mahindra of Messrs. Martin and Company, of Calcutta, to give evidence in regard to the actual working of the managing agency system. Though Bombay was thus expecting some kind of confirmation from the Tariff Board of the charges that have been levelled against managing agents, it was not prepared for the full-length discussion which the report has devoted to this topic.

The management of cotton mills is treated in a separate chapter; and even those agents who come in for fairly sharp reprimand at the hands of the Tariff Board members must admit that the report has presented a fair and just appraisement of the significance and value of managing agency and the limitations that have been observable in recent years owing to changed circumstances.

Bombay comes off pretty badly in the comparison that is made of the managing agency system as it prevails in the Western and Eastern capitals. The Articles of Association on our side would appear to be unduly favourable to managing agents who enjoyed more powers, privileges, emoluments, and perquisites than their compeers at your end. There is also a hint in the report of the weakening of the traditions established by the older members of the firm. In fact, it is more than a hint, though it is not as brutal as Dewan Chamanlal's description of the present generation of Bombay industrialists as third generation incompetents.

The result is that the system, such as it is at present, tends to give rise to more and more abuses. In the words of the Tariff Board, "the close sense of personal identity between the managing agent and his company which still actuates the better type of agent is disappearing and unless an effective system of external control takes its place, it is conceivable that abuses may multiply and the interest of investors may suffer." In the good old days, voluntary restraints and standards of contact among managing agents themselves did duty for statutory control. But these restraints and standards are giving way. There has, therefore, arisen an urgent and imperative need for the imposition of an external control by statute.

It is no use for the Government to plead that it would be inadvisable to amend Company Law while the constitutional question is pending. "The State has an inherent duty in every country to safeguard the interest of investors and this duty is rendered more imperative wherever the policy of protection is enforced." The Tariff Board, therefore, are clearly of the view that the system of managing agency should be brought under scrutiny with a view to the effecting of such amendments in the Company Law as may be required. Towards this end, the necessary preliminary investigations "should be taken in hand as soon as possible."

In brief terms, the view of the Tariff Board may be stated to be that the managing agency system has certainly its uses but is also liable to gross abuses; and that in order to preserve and strengthen the uses and eliminate the possibilities of abuses, the Government should lose no time in imposing statutory responsibility on the managing agents and enhancing real control by shareholders, directors and auditors.

Mr. J. J. Kapadia, the Secretary of the Bombay Shareholders' Association, is inclined to think that the criticisms of the Tariff Board "bear traces of unnecessary reserve and restraint." He believes that the Board's views on the necessity of managing agents in the Indian industrial system would have undergone a radical change if the report had been written after the Currimbhoy crash.

The managing agency system comes in for pretty severe castigation at the hands of the writer in the excellent Annual Market Review of Messrs. Premchand Roychand & Sons which has just been issued. The review urges a strong plea that the Companies' Act should be brought into line with modern practice. The failure of a great commercial house like the Currimbhoys must lead to considerable heart-searching on the part of those who are vitally interested in the welfare of Bombay. Such abuses as have come to light and as are responsible for the setback of the Bombay textile industry must be ruthlessly exposed and made impossible in the revised Company Law.

The review has also much to say on the competition offered to the Bombay Port; and while the defects in the economic organism of Bombay are shown up and while the warning is given that without the eradication of these defects, the future of our city must be dark, the writer of the review ends on a note of hope. In his view the worst phase of the depression has been left behind. There is more courage abroad. People view the future with a larger measure of confidence.

The largest shipment of gold from Bombay to foreign countries since Great Britain went off the gold standard nearly two and a half years ago, was made during the week-ending February 10. There steamers sailed from Bombay on Saturday, two for England and one for New York, carrying gold worth Rs. 5,68,09,147.

The P. and O. mail steamer "Corfu", which sailed from Bombay for London, carried gold worth Rs. 3,91,57,559. Out of this, gold worth Rs. 16,81,277 was for New York via London; gold worth Rs. 20,57,340 for London; option New York; gold worth Rs. 8,87,060 for London, option Amsterdam, Paris or New York; gold worth Rs. 3,06,068 for New York, option London; gold worth Rs. 27,09,524 for London, option Paris, Amsterdam or New York; gold worth Rs. 43,17,265 for London option New York, Paris or Amsterdam, and the rest for London.

GREAT BRITAIN

NOTABLE UTTERANCES

One is inclined to dwell at more length on the speeches delivered by the chairman at the annual meetings of the "Big Five," as the banks form a not negligible part of the nation's economic and financial machinery and as these annual orations have come to be regarded as the shrewdest interpretation of contemporary developments by men of weight and authority.

Mr. Goodenough's orthodoxy

The audience at the Barclays meeting composed of steady and sturdy Britishers must have found in Mr. Goodenough's speech a note of assurance dear to their hearts. For, Mr. Goodenough's optimism regarding the future was of the conservative brand and his suspicion and distrust of financial policies and experiments deviating even if slightly from standard and well-tried lines was profound and openly avowed.

The easy money conditions that existed almost throughout the year he attributes to artificial causes, namely, lack of suitable avenues of investment and the influx of money from abroad. Hence, he concludes, the rise in the prices of giltedge securities and stocks of a more speculative character. These conditions are suitable for the floating of conversion loans at lower rates and fresh loans at low rates—a fact which the Dominion Governments took full advantage of. The Home Government also greatly improved their budgetary position by the conversion of the War Loan to a 3½ per cent. basis and by financing the floating debt at exceptionally low rates. What economies have been secured from the easiness of money have all been, however, at the expense of the investors; and Mr. Goodenough expresses the hope—liberal if not wholly altruistic—that some relief to them should be forthcoming in the shape of reduction of income tax.

Trade Position

Mr. Goodenough proceeds, in a vein of subdued optimism, to trace the improvement in different branches of industry. The woollen industry had definitely improved. The demand for coal had increased during the latter part of the year. The iron and steel industry had made a better showing to the extent of diminishing unemployment if not of vastly increased profits. Shipping and shipbuilding were looking up, though still depressed. But the improvement in no branch of industry was large enough "to create any increased demand for accommodation from the banks." The percentage of loans to deposits, in fact, touched the extremely low ratio of 39.3 per cent. compared with 40.11 per cent. on December 31, 1932 and 51.32 per cent. at the end of 1931.

Overseas Trade

Reviewing the Board of Trade returns, Mr. Goodenough warns his countrymen to bear in mind that the small decrease in the adverse balance of trade together with the large favourable balance in terms of invisible exports and imports is due mainly to the depreciation in sterling. "This should only be regarded" proceeds the cautious and orthodox Mr. Goodenough, "as being a stimulant and cannot be relied upon to produce more than a temporary and passing benefit. Until we have reached exchange stability improvement cannot be accepted as altogether reliable."

The American Position

It is, however, in his reading of the international position, specially of that of the United States, that Mr. Goodenough's dread of new-fangled and daring policies is most manifest. He shakes his head at the steps which the President has proposed to take to rehabilitate national economy. His objections against the devaluation of the dollar and the 'Commodtty Dollar' may be summed up as follows:

(1) Even if devaluation of the dollar ultimately brings about the adjustment of prices and wages to a higher level the process is bound to be very lengthy and slow and the disparity between the internal purchasing power of the dollar and its exchange value for any length of time may bring about serious repercussions upon the world prices and international trade.

(2) A 'Commodity Dollar' system would be very complex and unworkable. Even within a particular country, conditions are often very variable and the compilation of an index number of commodity prices would be very difficult. And to compile an index number acceptable to all countries for the maintenance of international trade would be almost a hopeless task.

(3) The scheme would be unwieldy when readjustments are called for after any noticeable movement in prices, as for instance, when the necessity arises for applying a check to an incipient boom.

And Mr. Goodenough goes on: "Up to the present no such experiment as that of altering the gold content or gold value of a currency, in order to keep prices stable, has been tried. This method of maintaining stability of currency in relation to prices would be very complicated and would be in violation of one of the most important attributes of a good

monetary system which is that it should be as simple as possible."

It may just be mentioned in passing that a policy is not necessarily underirable because it is untried and that no standard monetary policies can be laid down for all countries and for all times. The merits of a policy are to be judged by results ; and so far the results have justified the daring experiment that President of the United States has inaugurated.

The American Tariff Policy

Mr. Goodenough proceeds to depreciate the modern spirit which is antagonistic towards international trade and which demands that nothing that can be made internally shall be purchased from abroad. At the same time, this policy insists that exports shall be encouraged by artificial measures in order to increase employment. He associates himself with the views of Mr. Wallace, the Secretary for Agriculture that the United States, to retain her place in international trade, must co-operate with other countries in the exchange of goods. But the danger, he points out, exists equally in the case of Great Britain. A tariff policy that heightens the economic insularity of a nation is antagonistic to world recovery and progress. The remedy, according to Mr. Goodenough, is a gradual return to the gold standard than which "there is no sounder or more generally accepted system for currency." But, naturally enough, he admits "that an early return to that standard either by Great Britain or U.S.A. or both would be impracticable at the present time because of the many difficulties which exist."

Westminster Bank

The Hon. Ruper Beckett in his speech at the annual meeting of the Westminster Bank takes up the thread at the point where he left off the previous year and finds, in the year under review, more grounds for hope and optimism than are apparent from a cursory perusal of the balance sheet. He believes that the progress of business recovery has been steady if slow and his confidence is "based upon the knowledge that in 1933 Britain has taken a definite step upward from the lowest depth of depression". But the tangible improvement in trade is yet internal or domestic and his optimism does not soar to the extent of forecasting a far larger volume of trade between nations.

He is definitely against economic isolation of countries and upholds the ultimate goal of an unrestricted interchange of goods between nations. But the contingencies of the present economic situation, he allows, call for trade treaties and tariff systems between groups of countries. "Some day the hard lessons of experience will compel the governments of the world to recognise that the fortunes of countries are interdependent. But the time is not yet".

"It now seems unlikely that in the near future we can hope to see a world conference successful in making a comprehensive agreements binding all the great nations to take measures that will loosen the bonds of trade. On the contrary, policies of narrow economic nationalism are still in the ascendant". Mr. Beckett finds no encouragement in the present stiff and wary attitude of other countries. But the ambitious World Conference having failed to produce the comprehensive trade treaties for the removal of trade obstacles, the present network of tariff regulations and trade understandings are, according to him, the next best thing. He again upholds the advisability of spending more freely on really useful works of public utility. In this he must have carried the whole-hearted support of his audience. There are forms of Government activity a patriotic Briton always loves to see and "slum clearance" is one of them. The National Government cannot do better than respect Mr. Beckett's suggestion—it will be a peg on which they can always hang many of their otherwise hollow arguments.

Mr. Beckett is generous in his review of the American situation. Without exactly raising three cheers for the President's monetary campaign, he wishes impatient Britishers to understand that Mr. Roosevelt was faced by paculiar and stupendous difficulties. "The position called for bold leadership and emergency action. The despair of an entire nation had to be turned to hope. Mr. Roosevelt since he assumed office, has not produced 100 per cent. magic but he can point to definite progress and important improvement in the morale of the people and in the volume of employment, production and trade. No emergency measures on the scale which he has been bold enough to try could ever fail to include serious mistakes. But for us who watch from outside it is surely the saner and the more helpful attitude to express sympathy and goodwill in the aim of the President's programme than to carp at and criticise every move in the game which we do not quite understand."

Mr. Beckett's "sober optimism" unlike Mr. Goodenough's is elaborate enough to embrace the United States, the cynosure of all eyes in the economic firmament to-day.

Lloyds Bank

The speech of Mr. S. Beaumont Pease of the Lloyds Bank is devoted mainly to elucidating the chief items of the balance sheet. It has become customary to expect from the annual speeches of these bank magnates a survey—and a helpful criticism—of economic conditions at home and abroad. But Mr. Pease has condensed his observations on the world economic situation into a few paragraphs and he refrains from making any definite charges or assertions. His statement is delightfully vague and inoffensive but it conveys the impression, nonetheless, that he is not an ardent admirer of Mr. Roosevelt's monetary policy. "International conferences", says Mr. Pease, "which at this time last year we hoped might throw some light on the darkness of the world's confused position and point some way of escape from the tangled mass of conflicting opinions and formidable obstacles with which we were surrounded, have come and gone and left us little the wiser. Economic theories are still bandied from one expert to another, while struggling trade is still groping to find a practical way past the same ald obstacles. On one side of the world old experiments are being tried out afresh as if they were new discoveries with renewed hopes and on a vaster scale than ever before while other continents look on with sympathy, but, unable yet to be convinced that the outcome will attain the measure of success hoped for and with some bewilderment at the contradictory nature of the methods employed and with some anxiety as to the possible repercussion of these experiments on themselves. I do not suppose you would wish me to try, even if I could, to weigh the merits or demerits of inflation or other monetary policies ; to apportion the blame between over-production and under-consumption, to judge between th edesirability of letting economic forces have free play or alternatively of determining the exact bounds which should be imposed on artificial interference. It is not characteristic of this country to theorise overmuch, or to be attracted by startling experiments and yet we have some facility without these things slowly but in a practical way to make progress."

Mr. Pease then proceeds in sober and lucid language to review the internal situation and to voice his confidence in the steady, practical and constitutional nature of the British People.

Air Mail Week.

The outstanding feature of the speech, however, is the warning he sounds against state interference in industry. A certain amount of restriction and deliberate planning by Government or any other authority is, perhaps, inevitable when the whole industrial machinery is out of gear. "But I do not believe", says Mr. Pease, "that any Government or any bureaucracy is capable of shouldering the heavy responsibility of saying how the industries of a nation should be run or that those industries can be active or prosperous when confined in a straight-jacket designed not by those who have to wear it but by theorists who think they have a genius for planning other people's clothes." He welcomes certain forms of internal restrictions such as exemplified by the National Shipbuilders' Security Ltd. or similar schemes in the wool-combing or even iron and steel, and cotton industries. He is even prepared to countenance such Government interference as is represented by the putting up of the Research Board. But he is scared because "in the sphere of electricity, in traffic and transport matters, in broadcasting, in coal mining and agriculture and in forestry operations we have seen the formation of Statutory Boards and witnessed attempts to regulate prices, to eliminate or compel amalgamations." He refers to the facetious remark of a critic that such control of industry "would involve a bureaucracy so great that it might indeed go far in solving the problem of unemployment." A Britisher, until somebody queers his pitch, loves to walk along the path of liberty and non-interference!

to regulate prices, to eliminate or compel amalgamations." He refers to the facetious remark of a critic that such control of industry "would involve a bureaucracy so great that it might indeed go far in solving the problem of unemployment." A Britisher, until somebody queers his pitch, loves to walk along the path of liberty and non-interference!

Mr. Pease, after a passing reference to the theory of State control of banks, which he considers *uncalled-for and injudicious, ends in* a tone of quiet optimism and steady well-being like the other illustrious speakers.

British Indian Service from Bombay to London and Continent—Three weekly.

BRITISH INDIA COASTAL SAILINGS

FROM CALCUTTA TO

Rangoon Direct—Sundays, Tuesday and Fridays.
Straits *via* **Rangoon**—Fridays, also Sundays (Transhipping passengers.)
Chittagong to Akyab, Kyaukpyu, Andrew Bay & Rangoon—Every Thursday.
Chittagong to Akyab & Rangoon—Every Thursday.
Coromandel Coast, Ceylon, Tuticorin, Malabar Ports, Bombay & Karachi—Monthly.
Colombo, Tuticorin & Karachi—Monthly.
Bombay Direct—Monthly.
Straits, China & Japan—Fortnightly.
Fremantle, Adelaide, Melbourne & Sydney—Monthly with additional sailings as required.
Mauritius *via* **Colombo**—About every four or six weeks as inducement offers.

FROM CHITTAGONG TO

Akyab, Kyaukpyu, Andrew Bay and ***Rangoon and Chittagong to*** **Akyab** ***and Rangoon*** **at regular intervals.**

FROM BOMBAY TO

Karachi—Direct Thursdays with English Mails, on Wednesday *via* Verawal & Mangrole on Saturdays *via* Porttokha and Cutch Mundvie and on Mondays *via* Porebunder & Cutchmandvie.
Basra *via* **Karachi and Persian Gulf Ports**—Subsidiary Mail steamers leave on Wednesday *via* Karachi and Persian Gulf Ports and the Fast Mail on Thursdays, the latter calling at Karachi, Bushire and Mahomerah only.
Malabar Coast Ports, Tuticorin, Ceylon, Coromandel Ports & Calcutta—As inducement offers about twice a month.
Calcutta direct—Monthly.
Rangoon—As inducement offers.
East & South Africa—Fortnightly, calling at Seychelles Mozambique monthly.

FROM KARACHI TO

Bombay—Direct every Thursday with English Mails. On Tuesdays or Wednesdays *via* Mangrole & Verawal & on Tuesdays & Thursdays *via* Cutchmandvie, Port Okha and Porebunder.
Busreh—*Via* Bushire & Mahomerah only on Sundays at 10 a.m., and *via* Persian Gulf Ports on Sundays between 9 & 11 a.m.
Malabar Coast Ports, Tuticorin, Colombo, Madras & Coromandel Coast ports and Calcutta Monthly, Tuticorin Colombo & Calcutta Monthly and to Rangoon as inducement offers.
Frequent connection with the E. & A. Line steamers from Hongkong to Australia and New Zealand.

explained and justified the present monetary policy of Great Britain. He began by explaining why a managed currency is necessary when the country is divorced from the gold standard. It operates, in the first place, as a restriction on the Bank of England whose powers, after the suspension of the gold standard, would have otherwise been undesirably limitless in the manipulation of the quantity of money. But it is pre-eminently desirable to maintain a more stable price level, the importance of which cannot be too greatly emphasised. For, although the deepening "Nationalism" of different countries and the chaotic state of foreign exchanges may still be almost insuperable obstacles in the path of a prosperous world trade, Mr. McKenna is hopeful that with the stabilisation of a satisfactory price level at home and consequent increased prosperity and confidence, the larger outlook of international trade will also improve.

Mr. McKenna finds, in the factor common to the experience of nearly all bankers for the year under review, namely, the contraction of loans and expansion of investments a happy augury that trade and industry will get a further incentive and that these will lead through a cycle of co-related stages to greater world prosperity. His reply and demand is truly characteristic. The present day economic problems are not to be solved by eternal truisms like two and two making four. It is as true that the quantity of money determines demand as that demand should determine the supply of money. He is similarly impatient with those critics who stigmatise the policy as artificial tampering with the value of the currency. We cannot do better than quote his own words.

> "They (the critics) recognise that operations of the Bank of England are responsible for variation in the total quantity of money, and they admit that the quantity of money is a governing factor in the price level. But so long as the operations are based upon the more or less accidental changes in the gold stock they regard them as natural, whereas such operations become artificial if deliberately directed with reference to the price level. It appears to me that the critics really mean no more by the term artificial than that the conception of reasoned control of the price level is unfamiliar to men. When they become familiar with the action by the Bank of England with a view to keeping the price level stable they will call it natural."

Mr. McKenna thus stands out amongst the bank magnates as the apostle of inflation and he is, in his way, a better champion of President Roosevelt's monetary policy than many Senators who flock to his side on a motion for division in the Senate.

FRANCE

THE CABINET CRISIS AND THE STAVISKY SCANDAL

France is now passing through a critical period; she is faced with a commercial, political and possibly financial crisis. The revised schedule of import quota which has been most carefully scrutinised by the British Board of Trade has not given satisfaction to them and Mr. Runciman, has sent a Note of Protest against the discrimination in favour of United States and Belgian goods. A threat of retaliatory action by imposing additional duties on a wide range of French products is also hinted if within ten days of the receipt of the protest the French Government do not restore the quotas to their 1933 level. This ultimatum has been causing some disconcertion in France where interest has by now shifted from the economic to political sphere.

Even in England, while in some quarters this ultimatum is regarded as a dangerous weapon to be used against a friendly nation, there are others who approve of it and argue that quota wars are more like international boxing matches and should be carried on as such. Whatever it may be, it has caused some disturbance in the French commercial circles, and it is reported that the French Government this time is determined to answer the British threat with determined action; for, it is reported that if current negotiations fail and the British Government is led to carry out reprisals, the possibility of a trade war between both the countries cannot be overlooked. The British view that different quota allowances cannot be made to different countries without the infringement of the most-favoured-nation clause, is not recognised by the French Government which points out that if the United States received 100 per cent. of its quota back, it was because America made

reciprocal concesions to French wines while Belgium has made even more important concessions.

France does not wish to, rather it could not, make an exception in favour of Britain, however much she may like to, without corresponding benefit as such action would upset all the agreements already reached with other countries. The attitude that will be taken by the British trade interests still remains to be seen.

What would otherwise have been smooth trade negotiations and bargaining for markets, has now become rather complicated in France particularly in view of the political crisis, for the simple reason that there is no government to carry on the quota negotiations with vigour. The Bayonne Bond Scandal has attained such a nation-wide notoriety that all France is in a state of tension. It had amazing repercussions; and as subsequent events prove, the vote of confidence, which the Chautemps Ministry had secured in the Chamber a few weeks back on the very same subject, proved to be only the postponing of the evil day. Public opinion has been roused to such a frenzy that a series of riots in the streets of the Capital could be witnessed; fiery accusations and counter-accusations in Parliament and Press were exchanged; often, real duals in the right oligarchic fashion took place between two distinguished barristers to maintain their honour; a bout of fisticuffs between a Minister and a Deputy in the Chamber was noticed, leading eventually to the downfall of the Cabinet. It is, therefore, interesting to examine the antecedents of this public scandal which has had such far-reaching repercussions in financial and political circles.

Stavisky is a notorious Russian swindler who has been a familiar figure in the French Police circles ever since the war as having been connected with many questionable banking operations. Although it was in 1926 that he first got into trouble over the issue of a cheque without provision, he had before that year been twice convicted as a common swindler and escaped a third conviction only due to the hospitality of a fond mistress. But it took two years for the prosecution to prepare the evidence for the changes made in 1926 and even after that, by clever process of squaring up the guardians of justice in each successive stage of the hearing, Stavisky had managed to avoid an open trial and has been carrying on unhampered fresh plans of swindling.

Already in 1928 he was discovered and stopped in an attempt to carry out in Orleans what he later on carried out in Bayonne—obtain money by selling or discounting bonds to be issued by the Credit Municipal or city pawning institution against the security of objects of much less value than that represented in pawn. The Credit Municipal of Bayonne like all others in France is a public institution in so far as its directors were nominated by the Prefect. Its accounts are also subject to control by the central authorities in Paris. Stavisky, who had secured the good will of the authorities of the Bayonne Credit Municipal, persuaded them to issue bonds to a total of several hundred million francs backed by articles of negligible value. Under the recommendation of the French Ministry of Labour, which also Stavisky had cleverly managed to obtain, he had been placing a good portion of these securities with many insurance companies including certain branches of the State Insurance Organisation. The fraud was brought to light during the attempt to discount some of these bonds in the open market. With the discovery of this attempt at large-scale fraud, the confidence of the people in all banking institutions was badly shaken. There was a regular run on the banks and the frenzy of the people for punishing the wrong-doers reached such a pitch that they would not be satisfied with anything less than an enquiry by the Ministry. Many arrests including the Mayor of Bayonne were made.

It appears strange that an instance of a large-scale fraud of this kind should have resulted in the downfall of a ministry. For one thing, that Stavisky should have been left free by the judiciary to indulge his genius for swindling with the passive and active support of the authorities points to the gross corruption in officialdom. Coupled with this is the absolute inefficiency of the administrative machinery which needs a thorough overhauling and a wholesale replacement of the officials who work it.

Is it, then, this incident alone that is responsible for the overthrow of the Cabinet? There must be something more seriously wrong with the French State if the Ministry were to quit office on an issue on which it had twice obtained a majority only a week before. The real cause lies deeper still and this must be sought in the exasperation which the misconduct of its affairs these past years has been accumulating in the public mind. This upheaval represents an "interpretation of Democratic government of which, by long experience, the entire country is weary and ashamed." Ever since M. Poincaire was removed from the helm of the State, the nation has been following a policy of drift. Faced with a formidable budget problem and a fast developing economic crisis, the Radical Ministry backed by the Socialist party in the Chamber could not solve the task while government succeeded government without great change in *personnel* or in policy. There was less of attempt at radical solutions of pressing problems and more of concentration on the party puzzle which was taking precedence of national needs. In these conditions, nothing was easier for the Opposition than to rouse public indignation to overthrow the Ministry; and an excellent opportunity was afforded in the Stavisky affair. The Radical Party became responsible for everything that happened no less before than after it came to power. The Chautemps Ministry came to bear the brunt of the responsibility for the outworn permanent machinery of administration, as also the inefficiency and dishonesty that were attached to it. The demand is thus for a reform of the constitution, a reform of the spirit of the legislature and executive branches of the government.

Political leaders including the two former Premiers M. Herriot and M. Tardieu were summoned by the President and requested to form a government but after reviewing the situation they preferred to remain in the background. Ex-President M. Donmague who was also approached refused on account of his advancing age. No one was forthcoming to undertake the task but there has been enough of vigorous propaganda for a national government, which should be above all party feuds. An Independent Left Deputy is reported to have said that a government cannot properly function with a Parliamentary majority alone and that it must have the confidence of the nation. And for this, a formula should be found which would allow of a government on a broad basis. A resolution issued by the Left Republican Party states that the Party "noting the bankruptcy of Party Government, and being profoundly disturbed by the financial crisis and the dangers of the international situation, resolves to defend the Republic against bribery and corruption, while determined to prevent the exploitation of scandal against the regime, and will give its support to a new Government on condition that by its composition and programme it is above parties."

After many polite refusals with thanks by older veterans, M. Deladier, who was Prime Minister from January 31 to October 24 last year, has come forward to form the Ministry. He is supposed to be a man of unimpeachable integrity and one best fitted to handle the situation at the present juncture. He had set out to form a small young and non-party ministry but found himself fettered by party intrigues and jealousies and the result is that his government consists of fifty per cent. Radicals and many taken from

Air Mail Week.

the old Ministry. At its first meeting, the Cabinet determined to throw full light on the Stavisky scandal and it is expected that its policy will be announced shortly ,regarding financial situation and fiscal reform.

Scrutinising the new constitution, one result is striking and that is its coalition character. While extending a little further to the Right, it still remains the same Left Centre Coalition. It is still the same old Cabinet with many of its old members under new "labels", leaving out only those who were most intimately connected with the scandal. As a "Ministry of all the Probities", with a fair mixture of varied talents, this Ministry is, ofcourse, a splendid success. But from the point of view of carrying on the administration, it is the ability of the Ministry to take decisive steps of action, with confidence to bear the full responsibilities thereof, and to lay down broad lines of policy, that count more than the honesty of character or the piety of wishes.

Viewed from this angle, the personalities of the Present Cabinet cannot be considered to be sufficiently strong and pushful to take definite lines of action. Fortunately, the task lying before it should not prove too big. For achieving the immediate purpose of allaying the spread of scandals, the Ministry is best constituted and it can be expected that there would be calm in the financial circles. The run on the savings banks as a result of rumours has not assumed such serious proportions and the reports say that it has already subsided. The franc is also firm in the foreign exchange market and the activities of the Washington Government though causing alarms have not become so prominent as to engage the entire attention.

The main task before the Government is the passing of the budget for 1934. Even here, owing to the measures of financial reforms passed by the Chautemps Ministry, the problem is not so complex as it might appear to be. Moreover, M. Pietri, who is the Member in charge of Finance and Budget Portfolios, is an acknowledged expert in Public Finance and combines with his reputation for undoubted integrity sound experience as a permanent official in the Finance Department. Politically he is in the Right Wing of the Government and his Budget should, in the ordinary course of things, command the confidence of the house.

GERMANY

TRANSFER TALKS AND THE GERMAN POLISH PACT

The German debt discussions are still in progress; the conference which began its session on January 25th, has not yet terminated; and reports as to the discussions are very vague and meagre. Much has to be gauged from the scanty details available from the movements of individual delegates. The discussions at present are more in the nature of private talks under the lead of the Foreign Office and the Ministry of Economics with the British and American delegates and the subject of the talks is supposed to be to find a solution in the commercial direction. Both the American and the British delegates are working in close co-operation. The British delegates hope to effect a settlement, although it is reported that *Dr. Schacht rejected the British* suggestion to replace scrips by blocked marks. Many new suggestions are also put forward by both the sides, and are actively discussed. Among them is a proposal to permit Britain and America to purchase certain amounts of blocked marks to pay for normal imports into Germany though it is too early to say what the definite results of the negotiations will be. It is understood that the discussions are proceeding on hopeful lines.

A *communique* issued on January 29 at the end of the preliminary conversations between Dr. Schacht and Germany's foreign creditors states that increasing mutual understanding was being evinced when attempts were made to evolve a process which would eliminate the uneasiness periodically caused to trade by repeated discussions of the transfer problem. Judging from such optimism, it must be said that the creditors have really achieved a satisfactory formula. It is true that the pecuniary gains which will result to the bondholders for the agreement reached at the discussions is of no great consequence, a few hundred thousand pounds which the increased percentage on interest coupons will yield, is not a great sum either for the debtors or for the creditors. It is the mutual understanding between the different parties that is valuable. Germany now concedes that it is not for one party to a debt contract to dictate to the other, the interpretation which she chooses to attach to it. And she now agrees that it is not within the province of an honest borrower to discrimiate among the holders of its obligations. This is a great advance on the attitude adopted by Dr. Schacht in December last.

Far more hopeful and more eventful for international political relations is the new German-Polish non-Aggression Pact which was signed on January 26. This has evinced warm expression of mutual esteem and congratulations in both the countries where the significance of the new Pact is being actively discussed. The Pact is being enthusiastically welcomed by the German press, which pays a glowing tribute to Herr Hitler as the initiator of the priceless service to the cause of Peace, under the heading "A New Situation in Europe". A searching analysis of the significance of the agreement is published in the official Polish organ *Grageta Polska* which describes the Pact as the most important and probably the last move in the direction of consolidating peace in the German Polish frontier. Considered from all points the Poet is of international importance and if it turns out in practice to be what it seems, it will be an achievement of the Nazi regime. We must give dictatorship its due that it has accomplished in a very short space of time a potential appeasement which would scarcely have been made under any of the democratic governments which Germany has known.

STATISTICAL INFORMATION

RAILWAY EARNINGS

The total approximate gross earnings of all State-owned Railways for the week ending 27th January, 1934 (43rd week), amount to Rs. 183 lakhs, Rs. 15 lakhs more than the figures for the last week and Rs. 9 lakhs more than the figures for the corresponding week of the previous year and Rs. 3 lakhs more than the corresponding week of 1931-32.

The total approximate gross earnings from 1st April, 1933, to 27th January, 1934, amount to Rs. 69,24 crores or Rs. 149 more than the figures for the corresponding period of the previous year and Rs. 34 lakhs less than the corresponding period of 1931-32.

The following are the up to date approximate gross earnings of the State-owned Railways from 1st April, 1933, as compared with the actuals of the corresponding period of last year.

Railways	Up to 27-1-33 (in lakhs) Rs.	Up to 27-1-34 (in lakhs) Rs.

TRADE OF KARACHI.

The statistics of the foreign trade of the port of Karachi for January, 1934, issued by the Collector of Customs, show that the total value of imports (merchandise) amounted to Rs. 1.02 crores, a decrease of Rs. 30 lakhs and that of exports to Rs. 1.52 crores, an increase of Rs. 18 lakhs as compared with the figures for January, 1933. The progressive totals for the ten months ending January, 1934, show a decrease of Rs. 3.31 crores or 24 per cent. under imports, but an increase of Rs. 86 lakhs or 10 per cent. under exports.

Comparative figures of the principal imports and exports for January, 1933, and 1934, are given below:—

Imports

In January, 1934.

	Quantity. Tons.	Value. Rs.
Cotton manufactures ...	...	17,30,183
Oils	...	5,68,565
Sugar	9,070	8,65,276
Cotton, twist and yarn ...	...	4,369
Metals and ores	...	10,33,214
Machinery and mill work ...	...	7,23,396
Liquors	...	3,70,758
Vehicles	...	4,90,081
Woollen goods	...	1,27,127

Increase or decrease as compared with January, 1933.

	Quantity. Tons.	Value. Rs.
Cotton manufactures ...	...	–24,04,611
Oils	...	–12,06,813
Sugar	–2,548	–2,95,047
Cotton, twist and yarn ...	...	–6,962
Metals and ores	...	+3,74,418
Machinery and mill work ...	...	+1,91,496
Liquors	...	+40,915
Vehicles	...	+12,994
Woollen goods	...	+11,328

The decrease under cotton manufactures occurred in receipts of all the three main sub-divisions of piecegoods, viz., grey, white and coloured. Imports of grey goods amounted to 1½ million yards valued at Rs. 2 lakhs as against 2½ million yards valued at Rs. 4 lakhs, while those of white and coloured goods totalled 4½ million yards valued at Rs. 8 lakhs and 2¾ million yards valued at Rs. 6 lakhs as against nearly 15 million yards valued at Rs. 24 lakhs and 6 million yards valued at Rs. 12 lakhs, respectively, in January, 1933. The total imports of cotton piecegoods during the ten months ending January, 1934, amounted to 123¾ million yards valued at Rs. 2.06 crores showing a decrease of 50 per cent. in quantity and 53 per cent. in value as compared with the corresponding period last year. The share of the United Kingdom in the total imports of cotton piecegoods during the ten months ending January, 1934, was 91¾ million yards valued at Rs. 1.61 crores, a decrease of 51 per cent. in quantity and 51 per cent. in value, while that of Japan was 31½ million yards valued at Rs. 43 lakhs, a decrease of 44 per cent. in quantity and 51 per cent. in value as compared with imports in the corresponding period of 1932-33. The decrease under sugar was shared both by Java and beet sugar. The total quantity of sugar imported during the ten months of the current official year was 58,688 tons as against 83,129 tons in the corresponding period last year. The decrease in imports of oils was most noticeable in receipts of kerosene oil from Russia and fuel oils from Persia, Roumania and British Borneo. Imports of metals increased mainly as the result of larger arrivals of steel bars and iron or steel hoops and strips from Belgium. The increase in imports of machinery was most noticeable in receipts of sugar machinery from the United Kingdom and electrical machinery from the United Kingdom and Sweden.

Exports

In Januarq, 1934.

	Quantity. Tons.	Value. Rs.
Cotton, raw	24,641	1,12,29,184
Wool, raw (Indian and Foreign)	2,208	15,66,730
Skins, raw	466	4,14,158
Hides, raw	270	1,46,735
Rapeseed	3,049	3,19,685
Wheat	83	7,582
Wheat flour	497	47,794
Barley	11	662

Increase or decrease as compared with January, 1933.

	Quantity. Tons.	Value. Rs.
Cotton, raw	+4,314	+8,33,907
Wool, raw (Indian and Foreign)	+1,134	+8,13,214
Skins, raw	+188	+1,58,479
Hides, raw	+159	+72,236
Rapeseed	+1,067	+36,161
Wheat	+37	+3,053
Wheat flour	–134	–25,488
Barley	–17	–1,333

The increase under cotton occurred mainly in shipments to the United Kingdom, Italy and China. Japan took 5,218 tons valued at Rs. 26 lakhs as against 9,562 tons valued at Rs. 50 lakhs in January, 1933. Shipments to Germany and Belgium also showed a decrease. The total quantity of Indian cotton exported during the ten months ending January, 1934, was 121,357 tons (679,600 bales) as against 88,213 tons (493,990 bales) in the corresponding period last year. The improvement in exports of raw wool was noticeable in shipments to the United Kingdom. Exports of raw skins increased as the result of larger purchases of goat skins by the United States of America.

Extracts from Directors' Report :

Report for the half-year ended 31st December, 1933, shows a nett profit of Rs. 92,721-7 after providing for Interests, Debenture Interests and Managing Director's Commission and also setting apart Rs. 17,314-5-3 for depreciation on Machineries, Buildings and other items of Capital Expenditure.

The debit balance of Rs. 4,681-12-1, as per last account, being adjusted against the said profit of Rs. 92,721-7, there remains a balance of Rs. 88,039-10-11 at the credit of Profit and Loss Account which, we recommend, should be dealt with as follows:—To General Reserve Rs. 25,000, to Reserve for Income-tax Rs. 24,000, to payment of a dividend free of Income-tax on Ordinary shares at the rate of 12 per cent. per annum (Rs. 6 per share) Rs. 24,000, total Rs. 73,000, leaving a balance of Rs. 15,039-10-11 to be carried forward.

During the half-year under report our mill has been fairly extended and nearly 30 per cent. more looms have been added to the existing plant with necessary preparatory machinery.

The prospects as outlined by us in the last report are realised fully up to the expectations. We are very hopeful of presenting you a brighter balance-sheet for the next half-year.—Dayaram Poddar, Brabhu Dayal Himatsingka, Baldeo Das Sarawgi, Madan Lal Saraf, Directors.

HUKUMCHAND ELECTRIC STEEL CO., LD.

Extracts from Directors' Report :

Report for the Year ended 31st December, 1933.

Revenue Account shows, after providing for all expenses including Interest, a Gross Profit of Rs. 1,70,080-14-3, Profit and Loss Account opened with a debit balance of Rs. 1,04,407-3-10, leaving a balance of Rs. 65,673-10-5, from which the following have been charged—Depreciation Rs. 45,000, Managing Agents' Commission Rs. 16,868, Leasehold rights Rs. 1,400, equalling Rs. 63,268, leaving a credit balance of Rs. 2,405-10-5 to be carried forward to the next account.

There has been a marked improvement in the position of the Company as compared with the previous year.

Actual orders booked during the year under review were highly satisfactory.

Deliveries amounted to 35,397 cwts. against 15,398 cwts. in 1932.

The increased output has resulted in a considerable reduction in overhead charges and this, combined with improved methods and rigid economy, has brought about a considerable reduction in works costs. The Company is now in a position to meet the keenest competition from all parts of the world.

The prospects for the current year are good and it is anticipated that the turnover will be not less than that of 1933.

Sir Sarupchand Hukumchand, Kt., and Babu Pannalal Bhatter, being away from Calcutta, have not signed the Report.—F. G. Williams, J. S. Ker, Kanailal Jatia, Sheokissen Bhatter, Directors. Sir Sarupchand Hukumchand & Co., Managing Agents.

THE EMPIRE JUTE COMPANY, LTD.

Extracts from Directors' Report :—

Report for the half-year ended 31st December, 1933, shows a profit on Revenue Account of Rs. 1,36,868-3-5, which sum has been transferred to the credit of Profit and Loss Account.

Profit and Loss Account—including the balance brought forward from last half-year and after making sundry adjustments and providing for Debentures Interest, commissions and taxation, shows a credit balance of Rs. 1,10,694-15-3 which sum, the Directors recommend, should be dealt with as follows:—

Pay the dividend due on the Rs. 10,00,000 7% Cumulative Preference Shares at 31st December, 1933, free of Income Tax ...	55,000	0	0
Pay a dividend on the Rs. 6,00,000 ordinary Shares at the rate of 12½% per annum or as. 10 per share for the half pear ...	37,500	0	0
Carry forward	84,194	15	0
Total Rs. ...	1,10,694	15	3

Jute stocks are shown at or under cost. Stocks of Gunnies, none of which are unsold, have been calculated at contract sale price.

Buildings, Power Plant and Machinery have been kept in through repair and the Mill continues in a high state of efficiency.

In accordance with the Agreement to which all Members of the Indian Jute Mills Association were signatories, work throughout the period under review has been on the basis of 40 hours per week with 15% of the total looms silent, H. H. Burn, J. S. Ker—Directors, Mcleod & Co., Managing Agents.

WORLD OF INDIAN FINANCE

Calcutta, February 23.

While it may be said that there has been a slight relief in the congestion in the money market here, Bombay reports a considerable pressure for credits. In Clive Street, bankers have not found it so difficult to secure accommodation as and when they needed; but to say this should not be interpreted as meaning that credits were plentiful. Money was in demand while supplies were not on as restricted a scale as they used to be. Rates between 1½ to 2½ per cent. were paid. Tightness was, as in previous weeks, confined to exchange banks. The money rates in Hornby Road ranged between 3½ per cent. and 4 per cent. towards the close. Friday's rate in Clive Street was 2½ per cent., with lenders over. The special stringency in the Western Capital must be attributed, in part, to the gold settlement and, in part, to the increasing interest evinced in government securities. 3½ per cent. Rupee Paper, which was quoted at Rs. 84-12 last week-end, is now in good demand round about Rs. 86-7. Other securities have registered advance in prices though not to the same extent as 3½ per cent. Paper. The outstanding feature of the market at the close was the quoting of 3½ per cent. 1947-50 at Rs. 96-1, which is one anna above the issue price. For the first time after the slump of last Spring, this issue has touched the level at which it was placed on the market. 4 per cent. 1960-70 has shot up to Rs. 100-8. There is manifest a tendency to transfer from 4 per cent. 1960-70 to 3½ per cent. 1947-50. During the past three weeks, 3½ per cent. Rupee Paper and 4 per cent. 1960-70 loan have recorded an appreciable rise; but 3½ per cent. 1947-50 was fluctuating within a range of a few annas round about Rs. 95-10. Now that 4 per cent. 1960-70 has gone to a premium, holders of this scrip are inclined to take the view that it would be safer to take profit and to reinvest the proceeds in 3½ per cent. 1947-50 loan which has so far remained unresponsive to the booming conditions.

At one stage, a general impression prevailed that, if there was to be a New Loan issue in India, it might be in terms of 4 per cent. 1960-70 at par. It was this impression which was responsible for the 1960-70 loan advancing somewhat sharply in price. As there is nothing further to "go for" in the case of this loan, it is, perhaps, safe to say that the upward movement in this scrip may now receive a check. Nothing is more natural, in the circumstances, than for investors to focus their attention on a scrip like 3½ per cent. 1947-50 which had remained hitherto neglected. And it is not unlikely that a new impression may grow up in the market that the Rupee Loan of 1934 may well be in terms of 3½ per cent. 1947-50 at an issue price of Rs. 97 or Rs. 98. There is another reason why activity in the coming weeks is more likely to centre round this scrip than on any other of the earlier favourites. 3½ per cent. Rupee Paper, at its present price of Rs. 86½, is about two points lower than 3½ per cent. sterling paper. The Government would not be very keen on this disparity against the rupee scrip yielding place to a disparity against the sterling scrip. While the financial authorities would certainly be interested in a healthier tone and livelier activity in the gilt-edge market, they would prefer this improvement to proceed in a way that would, while maintaining gilt-edge securities at a healthy level, not push up 3½ per cent. Rupee Paper to a higher price than that of the corresponding sterling stock. Prudence would, therefore, demand that a halt be cried to the upward trend in 3½ per cent. Paper. We have examined the reasons which counsel a more restrained rise both in 4 per cent. 1960-70 and 3½ per cent. Rupee Paper. To the extent that activity in these two scrips would be marked by extreme caution, 3½ per cent. 1947-50 has more advantageous possibilities and would, therefore, come to engage the affection and activities of market operators.

---

(1) There have also been rumours of an early announcement of a long-dated conversion loan. (2) Further, the market was expecting currency expansion by transfer of surplus sterling assets to the London branch of the Paper Currency Reserve. (3) There are still no signs whatever of a trade revival. Chances of remunerative investment are, therefore, still as unfavourable as hitherto. (4) The market also expects that with the weekly offer of Treasury Bills remaining unchanged at Rs. 1½ crores on the tender days and with about Rs. 6½ crores of Treasury Bill Maturities between now and the end of the month, there should be good demand for gilt-edge securities

which should push prices up. (5) Yet another factor is the comparative shrinkage in the receipts of gold from upcountry centres and a consequent reduction in the demand for money on that account. (6) The market is anticipating the budget announcement regarding the prospects of loans for the new financial year; and the present rise in the price of rupee securities should be taken as having discounted the budget announcement. (7) As has been shown in an editorial on the Railway Budget, Sir Joseph Bhore's reference to lower interest charges in the coming year is calculated to strengthen the hope that the borrowing rate of the Government of India in the coming months must be lower than was the case in the last Loan. (8) With London showing consistent steadiness in India sterling securities, and with the talk of further fall in interest charges at home (attention must be drawn here to Professor J. M. Keynes' reference at the meeting of the National Mutual Assurance Society reported in this morning's papers), the market in India is well set for a further rise in giltedge. While these factors indicate a brighter outlook, the question must be posed again whether the stage has not arrived when operators should follow the further rise in prices with caution, so that the disastrous experience of the debacle of last Spring may not be repeated.

The tightness in money was reflected in the weekly offer at the last Treasury Bills auction. The total tendered was only Rs. 1,83 lakhs, which is about half of the previous week's. Intermediate sales do not make a poor showing if regard be had to the Maturities during the week. But as the maturities in this and the next week are substantial, it should be considered unsatisfactory if the intermediate sales announced in the next week's *communiqué* are only on the same scale as in the last. The latest return of the Imperial Bank shows that the ways and means advances outstanding on February 16, were Rs. 8 crores. With a comparatively quieter tone in the exchange market which is largely due to the gold position, it is unlikely that the Government could have purchased any appreciable amount of intermediate sterling during the week. Therefore, the next statement of the Bank's affairs would probably show a dimunition in the figure of ways and means outstanding. But if intermediate Treasury Bills are not on a very large scale, the ways and means advances should again swell up in the next week, especially in view of the usual month-early outgoings.

A strong plea was urged in last week's *Indian Finance* for expansion of currency against sterling securities. While our views in this regard remain unchanged, we should, however, point out that in view of the shrunken gold shipments and in view of the quieter tone in the exchange market, the Government are unlikely to act on our suggestion in the conditions prevalent in the current week. To them, exchange is the paramount consideration. All else is subordinated thereto.

In the course of the presidential address delivered at the 8th Annual General Meeting of the Indian Chamber of Commerce, Mr. A. L. Ojha made a comprehensive review of the trade and monetary position, both at home and abroad. He comes to the pleasant —perhaps, too pleasant to be true—conclusion that on balance, 1933 left us in the throes of a depression but the corner towards prosperity has been turned and the outlook for 1934 is brighter. If this figure of speech is to be used—and it is in constant use in this connection—the utmost we would like to say is that though we have not turned the corner, we appear to have caught a glimpse of the turn of the corner. Mr. Ojha made out an interesting point about the international economic developments emphasising the greater vogue of national self-sufficiency. And his whole speech is calculated to indicate the steps which India should take to attain such self-sufficiency. Mr. Ojha's is a notable address, marked by a broad outlook, careful thinking and proneness towards hopefulness.

"Exchange has gone to H-1"—said a banker in describing the developments in the exchange market which are somewhat difficult to understand. There has been a quieter tone and a drop in the rate. This phase in exchange is largely psychological. There are very few bills appearing and gold shipments are also on the small side. The rupee-rate has been too near the top for all these weeks; and as there was not sufficient business to keep the rate at the top, the market had to get away from a level so high. Money also was not in such keen demand and this was another weakening factor of exchange. When one particular bank came out to-day as seller of T. T. at 1s. 6 1/32d., others followed. If the international developments are of a character to take up the price of gold again in London, it may well be that gold shipments from India will swell and push up exchange.

The closing rates are: 1s. 6 1/32d., February-March T. T.; 1s. 6d., April-May T. T.; and 1s. 5 31/32d., Monsoon months T. T.

Bills may be quoted: 1s. 6 5/32d., for two mails; 1s. 6 1/8d., March-April; and 1s. 6 3/32d., May onwards.

Money has been none too plentiful; the quotable rate towards the close was 2½ per cent. In the earlier days, the rate was 2 per cent. Firms' money for call, three days' and seven days' notice was quoted ¾ per cent. One month and two month deposits were quoted 1¼ per cent. and three month deposits 1½ per cent.

FINANCE ABROAD

	Sterling dollar rate	Sterling franc rate	London price of gold
February 15 ...	5.04 15/16	77.28	137s. 5d.
" 16 ...	5.08 5/8	77.08	136s. 4d.
" 17 ...	5.09 1/2	78.03	135s. 10d.
" 19 ...	5.13 9/16	78.84	134s. 9d.
" 20 ...	5.06 1/4	77.43	135s. 9d.
" 21 ...	5.07 1/2	77.59	136s. 5d.
" 22 ...	5.08 3/4	77.78	136s. 1d.

Once again, sterling has shown signs of firmness both against the dollar and against the franc. On February 19th, the sterling-dollar rate was quoted 5.13 9/16 against 5.04 15/16 on February 15th. And the sterling-franc rate showed during these days a similar rise from 77.28 to 78.84. There has, subsequently, been a fall to 5.07½ and 77.59 in the sterling-dollar and the sterling-franc rates respectively. The London price of gold has followed the movements of the two exchanges. From the high level of 137s. 5d. it went down to as low as 134s. 9d. and has since, with the weakening of sterling, recovered to 136s. 5d.

It will be seen from the table that the London price of gold has moved more in agreement with the fluctuations in the sterling-franc rate than with those of the sterling-dollar rate. The gold movements to New York from London have continued during the week. It it learned that on February 14th gold valued at £7 million was placed on board the White Star liner *Majestic* bound for New York from Southampton. And it is also reported that the *Majestic* would ship a further £2 million worth of gold at Cherbourg. According to *Reuters* there has been an influx of 325 million dollars of gold from abroad in New York within the week ending February 21, and that a total of 8 million dollars of gold is due to arrive at the end of this week and several more millions worth in small shipments. The Netherlands Bank alone has lost £1,600,000 worth in the past week making £8.8 million for the last three weeks.

From all this it will be seen that New York continues to attract gold. It might be thought that, in as much as America is providing more lucrative markets for the world's gold stocks, the London price of gold should show a greater degree of accord with the sterling-dollar than the sterling-franc rate. But it should be remembered that the reports of gold shipments to New York obscure in great measure the relative importance of gold movements between London and Paris and gold movements between London and New York. Our *Overseas* columns this week convey a gentle hint about the limitation which freight space imposes on the shipments of gold to America. But it is certain from all reports that more difficulties of a practical and a theoretical kind are being felt by the exporters of gold to America than are indicated in our Overseas columns.

Apart from these, there is, in the first place, the delay occasioned by the Bank of France in meeting the demand for gold. It is really too much to expect the Bank to be in any undue haste to reduce its gold stocks or to work overtime in meeting the application for gold. It was pointed out only last week that practical obstacles have been created by means of apparently harmless and legitimate changes in the administrative routine. Nevertheless, it has been possible to put through large deals in gold between the London and Paris markets. The practical difficulties referred to are firstly, the inadequate facilities for financing the export of gold. Those who have the money are not prepared either to ship gold or finance the shipping of gold and those who are prepared to ship gold or finance the shipments have not the wherewithal to do it. It is also learned that the exchange markets are putting in a spoke or two in the wheel. In spite of the fact that the avowed policy of the French authorities is to maintain the stability of the franc against odds and the American policy is to depreciate the dollar, forward francs are reported to have been unsaleable and forward dollars altogether scarce. This is a clear indication that the market's outlook of the future of the dollar and franc is markedly in opposition to the declared policies of the Governments of the two countries. It may be said that, whatever the intentions of the American Government, the distinct possibility, that the repatriation of American capital has barely begun and that the future might witness a heady inflow of capital back to America, shows that the dollar is in for a period of unexpected and unwelcome strengthening. Likewise, in their efforts to maintain the stability of the franc the French Government might be confronted with insuperable obstacles.

Whatever that might be, for the present the outflow of gold to America has been restricted by the practical difficulties experienced in the exchange market. With such practical difficulties and with the comparatively better facilities for shipping gold from Paris to London than from London to New York, the London price of gold in London would adjust itself more to the sterling-franc rate than to the sterling-dollar rate. For any undue rise in the London premium on the sterling-franc rate would stimulate an inflow of gold from Paris which will correct the abnormality. In fact, such corrections have happened during recent weeks; and so long as the Bank does not impose any fresh restrictions on the outflow of gold, the tendency must continue.

It is necessary in this connection to note one circumstance in which the London price of gold might secure comparative freedom both from the dollar and from the franc rates. If the American authorities should prove successful in their efforts to depress the dollar and dissuade the flight from the franc caused by fear of abandonment of gold standard, the resultant appreciation of sterling in terms of these two currencies might mean a fall in the London price of gold.

How far the American authorities would succeed in both these objectives is, however, a different matter. They have the will; will they be allowed to have the way?

A Washington message dated February 17, says that Mr. Scrugham introduced in the House of Representatives a Bill requiring the Treasury to purchase at least 25,000,000 ounces of silver each month for six months and 10,000,000 thereafter until 1,000,000,000 ounces were purchased or a 16 to 1 ratio was reached.

The monthly purchases would be reduced to 4,000,000 ounces if the commodity price level exceeded that of January 1, 1926. Silver certificates would be issued against the silver purchased redeemable in silver bullion in the value of the gold equivalent at the time of redemption and any certificate redeemed to be replaced by added purchases.

The silver group in the House decided to create a "Committee of one hundred" headed by Mr. Fiesinger and circulated a resolution pledging Mr. Fiesinger's support to the Bill and requiring the Treasury to purchase 50,000,000 ounces monthly, provided such purchases did not exceed 1,000,000,000 ounces. Silver would be purchased at the market price with certificates redeemable in gold.

A Prague message dated February 15 is to the effect that Government Bill has been introduced in Parliament reducing the gold content of the Czech crown from 44.58 to 37.15 milligrams, and reducing the bank note gold cover from 30 per cent to 25 per cent.

NATIONAL INSURANCE CO., LD.
Head Office : National Insurance Building,
7, COUNCIL HOUSE STREET, CALCUTTA.

1933 Result:

New business Completed exceeds **Rs. 1,67,00,000.**
The Company with a steady progress all round.
All forms of life assurance policies issued at low safe rates of premium.

Specialities :

Female Lives. Joint Lives. Permanent Protection Policies, Triple Benefit Policies. Marriage and Future Provision Policies.

For Agencies please apply to—

COMMUNIQUES AND RETURNS

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months' Treasury Bills were opened on Tuesday, February 20. The total amount offered was Rs. 1,83,75,000. Tenders at Rs. 99-8-6 and above were accepted in full and those at Rs. 99-8-3 were allotted approximately 78 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Re. 1-14-5 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Tuesday, February 27. Successful tenderers should make payment on Friday, March 2. Other conditions are as usual.

Three months' intermediates will be sold from February 21 to 26 at Rs. 99-9 per cent subject to the conditions previously announced.

Three months' intermediates sold from February 14 to 19 amounted to Rs. 93,75,000.

STERLING TENDERS

The Controller of the Currency notifies that on Wednesday, February 21, tenders to the amount of £51,850,000 at 1s. 6 1/16d. were recived and allotted approximately 2 per cent.

On Wednesday, February 28, £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE

The balance of the Gold Standard Reserve on the 31st January, 1934, amounted to £40,000,000 and was held in the following form:—

	£
Cash at short notice at the Bank of England	3,497
British Treasury Bills	19,866,568

MARKET REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, February 22.

A good deal of activity prevailed in the Stock Exchange during the week under review and a very large business was put through. Government Securities exhibited considerable firmness while Jute Mills' Shares have practically monopolised the attention of the market.

Cottons were somewhat better while the undertone in Coal remained fully steady.

Among Miscellaneous Industrials quiet support was in evidence for selected stocks in Engineering and Sugar groups. Teas were quiet but steady.

Government Securities.

Giltedge section opened quiet on Monday, but on account of 'short' covering prices improved later to some extent—on Tuesday evening when it became known that the yield on Treasury Bills had advanced to Re. 1-15-3, a quieter tone had obtained in Government Paper. On Thursday the market again improved and 3½% Government Paper advanced to Rs. 85-14 at the time of writing on strong buying from Bombay—other long-dated Loans were also in good demand. 4% Loan (1960-70) were marked up to Rs. 100-2 and 3½% Loan (1947-50) to Rs. 95-14 5% Loan (1945-55) also advanced to Rs. 114-8.

Medium-dated Loans, however, remained practically unchanged.

Fixed Interest bearing Securities.

The Bank rate remained at 3½ per cent. Buyers predominated in Jute Mills Preference Shares and as a result rates hardened and a fair business was put through.

Among other Preference Shares, there are buyers of Burraker Coal and Equitable Coal at advancing rates but no business was reported.

Bengal Telephone (Pref.) were marked at Rs. 14, B. I. Corporation (Pref.) advanced to Rs. 120 on good enquiry Burn & Co. (6% Pref.) were dealt in at Rs. 100 and 7% issue at Rs. 115, Indian Standard Wagon (Pref.) improved to Rs. 113 and Kumardhubi Engineering (Pref.) to Rs. 48-8, Tata Iron & Steel (2nd Pref.) were quoted at Rs. 118.

A fairly large business was put through in Debentures. A fair business was reported in long-dated Calcutta Port Trust Debentures at firm rates, while a few deals were recorded in 4% Calcutta Municipal issues at last levels.

Among Jute Mills issues 7% (1922-52) Nuddea Jute changed hands at Rs. 110-8 while among Industrials 7% Elgin Mills changed hands at Rs. 109, 6½% Great Eastern Hotels at Rs. 112 and 5½ Dalhousie Property at Rs. 96.

Other Industrial Stocks

Very little business was reported in Bank shares during the period under review. Central Bank remained unchanged round about Rs. 24 but towards the close following support from Bombay Imperial Bank's shares have hardened to Rs. 1,236-8 for the fully paid up issues and to Rs. 310 for the Contributories.

Among Light Railways, the enquiry for 3½% Government guaranteed issues was again in evidence but only a limited business was put through. Hardwar-Dehra were marked at Rs. 110, Howrah-Amta at Rs. 88 and Shahdra-Delhi-Saharanpur at Rs. 119. Buktiarpur Bihar and Howrah-Sheakhala were, however, on offer.

Cottons.

Rather more interest was shown in Cotton Mills shares and prices generally were somewhat higher. Bengal Nagpur (Ordy.) were marked at Rs. 18-8, Dunbar (Ordy.) advanced to Rs. 116 and Kesoram (Ordy.) were dealt in at Rs. 3-10. Elgin Mills changed hands at Rs. 70 and New Victoria (Ordy.) at Rs. 1-5.

Coals.

Although there was no important development and the Railway Budget contained no proposal for giving relief to the Coal industry, Coal shares again came into prominence presumably in view of the satisfactory reports that have been recently published, in spite of trade depression and possibly in anticipation of some favourable news in connection with the tenders for Railway Coal.

Amalgamated were better at Rs. 14-12, Burrakur (Ordy.) kept very steady at Rs. 14-8, Equitable (Ordy.) at Rs. 21-8, Raneegunge remained fairly steady round Rs. 44, Sendra improved to Rs. 10-8 on a good enquiry and Standard were firm at Rs. 30.

Among smaller shares a good investment demand was noticeable for Aldih up to Rs. 3-4, Bhalgora were marked at Rs. 3-4 on dividend rumours, South Karanpore were again better at Rs. 5-2 and Talcher at Rs. 1-12.

Latest reports from the Coalfields indicate that the improved demand has been maintained for all grades of coal.

Jutes.

In sympathy with firm Hessians and Raw Jute, Jute Mills shares ruled very firm and a very large and comprehensive business was put through at all round advancing rates.

Owing to more enquiry from consumig centres 9 Porters Hessians were moved up to Rs. 10-10 at one time during the week and due to continued small arrivals and firm upcountry reports Jute advanced to Rs. 33-6. Howrah and Kamarhattys—the two market barometers sharply advanced to Rs. 57 and Rs. 573 ex dividend respectively.

As the session progressed the prices of both Hessians and Jute sagged considerably. 9 Porters Hessians at the time of writing are quoted no better than Rs. 10-6 and 'Raw Jute' are marked at Rs. 32-4. But in spite of the quieter tone in the commodity markets there was practically no change in share values. Howrahs are now slightly below the best at Rs. 56-8 and Kamarhattys at Rs. 568.

This optimistic tone is accounted for by the fact that the technical position of the industry has improved a good deal owing to continued rise in the prices of the manufactured goods and a comparatively quieter tone in raw material. Mills, it is reported, have made large forward sales at remunerative rates and thereby this manufacturing profit has increased and the prospect for dividends is brighter than for sometime past.

Although there were more selling orders for higher-priced stocks from upcountry they were readily absorbed and rates in many instances advanced 25 to 30 points. Anglo-India were marked up to Rs. 390, Bally to Rs. 190, Barnagore to Rs. 170, Fort Williams to Rs. 290, Fort Gloster to Rs. 565, Kinnison to Rs. 696, Lawrence to Rs. 500 and Naihati to Rs. 420.

Reactions may likely come from time to time but the prospect of this section is assured for sometime to come if nothing untoward happens in the meanwhile, as still higher prices are expected in near future. Investors are, therefore, reminded not to be nervous at any fall, but are advised to pick up better scrip at every reaction.

Electricals.

There was no particular development in this section. Trading was on a restricted scale but rates continued steady. Bareilly Electrics were dealt in at Rs. 11-12, Bengal Telephone (Ordy.) at Rs. 14-8, Patna Electrics at Rs. 13-8, Rawalpindi at Rs. 18-4 and Upper Ganges Valley at Rs. 9-2.

Engineering.

Engineering concerns shares have displayed a further hardening tendency. Arthur Butler were taken off the market up to Rs. 6-10, Burn & Co. (Ordy.) advanced to Rs. 200 with buyers over. Indian Galvanizing were better at Rs. 8-14 and Indian Standard Wagon (Ordy.) at Rs. 50-8. Both Bengal Iron and Indian Iron & Steel were marked at Rs. 3-12 and Rs. 5-2 respectively. Kumardhubi Engineering (Ordy.) and Marshalls remained steady at last levels.

Sugars.

A definite improvement was recorded in the prices of Sugar Mills' shares during the week following the issue of a Circular by Messrs. Begg Sutherland & Co., Ld. shewing that damages done to the Sugar Mills under their Managing Agency by the earthquake were comparatively less than what was at one time presumed. Cawnpore (Ordy.) were marked up to Rs. 32-6 on the publication of a satisfactory report for the year just closed. Carew & Co., however, remained practically unchanged. Prices of Champaran, Ryan and Samastipore have hardened on the issue of the Managing Agents' Circular. New Savan kept steady at Rs. 13-4 and Rohtas at Rs. 10.

Miscellaneous.

There was no important development in this section save and except some enquiry for steamer Transit Group. Port Shipping advanced to Rs. 14 cum dividend, from a quotation of Rs. 12-12 Calcutta Landing & Shipping were marked at Rs. 8-10, and Indian General Navigation (Ordy.) at Rs. 83, Midnapore Zemindary (Ordy.) were a firm feature at Rs. 62, and at the present price, it appears a very attractive investment in view of the improvement in commodity prices. Burma Corporation advanced to Rs. 9-10 and Bengal Aerating Gas to Rs. 64 Calcutta Tramways (Ordy.) kept steady at Rs. 16-4 while Indian wood products gave way to Rs. 27-12.

Teas.

Dull conditions prevailed in this section, although the undertone kept very steady. It appears now that the activity, in this section, will not return until the reports for the period ended 31st December, 1933 are available. In the meanwhile, it is presumed that Tea shares will undergo not a very great change as the holders generally, are not inclined to part with their holdings at any sacrifice.

MADRAS STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Madras, February 22.

The securities market was very firm during the period under review. 3½ per cent. Paper touched Rs. 86 and 4 per cent. 1960-70 Rs. 100-5 with speculative buying Though, at the close, the market reacted and closed a few annas lower, 3½ per cent. 1947-50 was in good request with a considerable business done at Rs. 95-13. Amongst other short and medium dated loans, 4½ per cent. 1934 was taken up at Rs. 100-14, 5 per cent. 1939-44 at Rs. 107, 5 per cent. 1940-43 at Rs. 107-4 and 5½ per cent. 1938-40 Bonds at Rs. 107-11. A considerable budlee was done in 4 per cent. 1960-70 which was sold being replaced by 4 per cent. 1953-63 Mysore State Loan. Other Mysore State loans noted business at quoted levels while Cochin Loan hardened to Rs. 104.

There was no business in municipal or port trust debentures, though there was some business in joint stock company debentures. United Nilgiri 7 per cent. 1943 was taken up at par while Vellores was wanted at 2 per cent. premium. In the preference share market, Deccans were taken up at Rs. 116, Vasanta Mills at Rs. 105 and Cambodia Mills at Rs. 114.

Electrics and Telephones were firm. Madras Telephones were done at Rs. 16½, whilst Vellores improved further to Rs. 11-4 with buyers over. There was a good enquiry for Rangoon Trams with no sellers.

Bank shares were firm. Imperial Bank fully paids noted several deals between Rs. 1,235 and Rs. 1,240. Central Banks were wanted at Rs. 24-4 and Mysores at Rs. 213 ex dividend. State-Aided Banks continued unchanged at Rs. 15.

Textile shares were strong with the exception of Kaleeeswarars and Cambodia. Buckinghams were taken up at Rs. 181, Bangalores at Rs. 85 buyers over, whilst sellers in Kaleeswarars pressed the market down to Rs. 265. Cambodias were done at Rs. 9-4.

Cement and sugar shares were firm. A large business passed in Indian Cements and Shahabad Cements at Rs. 305 and Rs. 295, whilst amongst cash shares, United Cements improved to Rs. 66. Deccan Sugars jumped to 272 for the Big and Rs. 65-8 for the Small shares at which rates business transpired. Amongst Calcutta shares New Savans were offered at Rs. 13.

The rubber share market was steady with Cochin Malabars done at Re. 1-8 and Kaluturas at Rs. 15.

Teas continued to improve. Peermades were taken up at Rs. 28½ and Periakaramalais at Rs. 43 while United Nilgiris touched par. Amongst small priced shares, Nilgiri Neergundis were a feature at Re. 1.

In the Miscellaneous section, Burma Corporations were popular with business done at Rs. 9-3 and subsequently at Rs. 9-12. United Breweries, after being done at Rs. 93, were in request at a shade over.

The markets closed with a firm undertone.

BOMBAY STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Bombay, Feby. 23.

Securities

The giltedge market developed a very firm tone during the week. 3½ per cent. Government Loan went up by about one rupee, and from the close of Rs. 84/14, it fluctuated within narrow limits on Friday and Saturday touching the lowest at Rs. 84-13. On Monday, however, a prominent "bull" purchased a fair amount; and on Tuesday, brisk and heavy buying followed on anticipation of an immediate expansion of currency and various reports about fresh borrowing in the next financial year. The highest rates touched was Rs. 85-15-8 closing at Rs. 85-13-6.

All cash issues ruled strong.

Shares

Mill shares, on the whole, ruled dull, while industrials were steady. Tata Steel and many cement scrips were in great demand. Bombay Burmas, old, were in the limelight putting up a nice spurt today. On Wednesday, Bombay Telephones jumped up on reports of better dividend. Oriental Life Insurance continued its upward march. The price movements of important scrips are given below:

	Closing price on 15-2-34	Highest	Lowest	Closing price on 22-2-34

JUTE AND JUTE GOODS

JUTE

Calcutta, Feb. 22.

Steady conditions have prevailed in the jute market during the current week. The highest and lowest quotations for May Futures were Rs. 33-2 and Rs. 31-12 per bale respectively. The "long" sales during the previous week were well-absorbed by trade. The offerings at the decline both in futures as well as spot goods were poor. At the same time there was heavy short bear position. The moment coincided with the small boom in Wall Street and the success of Bankhead Bill for control of cotton production, in U.S.A. was considered an accomplished fact. This led the bears to cover hastily and the market rose sharply between Friday and Saturday. The goods market was also very firm, business being done at advancing rates both in hessians as well as heavy goods. Consequently, May futures touched Rs. 33-4. Business in February Firsts was done up to Rs. 30 and local mills paid Rs. 4-6 to Rs. 4-12 for supervised Indian Jat XLR and LR respectively.

On Tuesday and Wednesday, the conditions were, however, easier, due partly to profit-taking and partly to the absence of trade support at the rise. The Hessian market also had a reactionary trend and heavy goods were stationary after the rise. This naturally brought the prices down and Rs. 32 was once again touched on Wednesday. Fresh buying was keenly felt at the decline and by the close of the day values again rose to Rs. 32-12.

Business was done at Rs. 29-10 for March and there were sellers of Indian Jat LR and XLR at Rs. 4-14 and Rs. 4-6 respectively.

The undertone of the market is fully steady but the trade is unwilling to pay higher prices than those now ruling. There is little support after the rise and higher values are, therefore, not maintained.

London, Feb., 22.

London raw jute market was fully steady in sympathy with the Calcutta market. The highest and lowest quotations for Feb.-March Firsts were £17-0 and £16-15-0 respectively. The volume of business done was comparatively small, interest by spinners being shown only at declines.

JUTE MANUFACTURES

Calcutta, Feb. 22.

Very steady conditions have prevailed in the jute goods market during the week under review. The highest and lowest quotations for nine porter hessians were Rs. 10-8 and Rs. 10-2 as against Rs. 10-1 and Rs. 9-13 respectively during the previous week.

The improved condition of the New York Stock Exchange, the rise in raw cotton and the bright prospects before the Bankhead Bill were responsible for the buoyant outlook of the market. The heavy goods market, which was just looking up towards the close of the previous week, showed further strength. Large-scale business was done in this section at advancing prices. Mills sold freely for all positions and the sales were well-absorbed partly by far-Eastern shippers and partly by the bazar. Business in March B. Twills was done up to Rs. 25-4 and in Liverpools at Rs. 28-4. There is a slight reaction after the rise but fresh enquiries are likely to raise values further.

New York, Feb. 22.

The hessians market has been ruling steady and the volume of business has been fairly large at advancing rates. Towards the close the tendency of the market was, however, easy. The highest and lowest quotations for 8 oz. and 10 oz. hessians were 5.35, 6.80, and 5.25 and 6.60 cents respectively.

COTTON AND COTTON GOODS

COTTON

(By Wire)

(From our correspondent)

Bombay, Feb. 23.

The uncertainty over the Bankhead Bill in America has somewhat enervated bulls though trade demand continues very good.

New York May, from the last close of 12.24, closed yesterday at 12.17 after fluctuating between 12.44 and 12.09.

Liverpool May, from its previous close of 6.35, closed yesterday at 6.29, touching the highst at 6.39 and the lowest at 6.13 respectively.

Local Broach April-May, from its previous close of Rs. 208/4, stands at about the same level, after fluctuating between Rs. 221/12 and Rs. 205/12.

The immediate trend is uncertain.

Calcutta, Feb. 22.

After the sharp rise that was the feature of the previous week's cotton market, a reaction had set in and the lowest price of the week for Broach April-May was Rs. 205, a level touched during the previous week. The closing was, however, steady at Rs. 208. The market has been showing considerable resistance at declines. Further reaction may not be unlikely, but expert opinion has been in favour of purchases at declines.

New York July is maintained near 12.30 and Liverpool January at 6.27.

Egyptian Sakellarides are also steady at 8.80.

The prospects of the Bankhead Bill are better but the same appears to have been discounted by the market at the moment. The feature of the improvement in commodity markets during the recent rise has been that the progress has been slow but steady. There is a long liquidation at every rise; consequently the top-heavy market is never prolonged to threaten an unexpected crash. Liquidations are well-absorbed at declines. This gives further impetus to the buyers and bulls are always ready to come in the market at declines. Their purchases at such moments do not disappoint them, as the resistance at the decline immediately forces the market up, thus lending strength and confidence to holders. This is a healthy feature of the market and may ultimately lead to higher commodity values.

PIECEGOODS

Calcutta, Feb. 22.

The piecegoods market during the period under review has ruled steady. The enquiries have been more numerous, but the resultant business on the whole is not so large. Stocks in the local market, especially for Lancashire goods, are diminishing. There has been restricted business, due to the wide disparity between the prices offered by the dealers at this end and those demanded by the makers.

Piecegoods imports into Calcutta:

Although the total number of packages of piecegoods and yarns imported into Calcutta from outside ports during January have expanded by 5,274 packages, as compared with the returns made in the previous month, they nevertheless fall short of the corresponding period last year by 7,440 packages. The relative figures are:—

Dec., 1933.	Jan., 1934.	Jan., 1933.
7,320 pkgs.	12,603 pkgs.	20,043 pkgs.

It will be seen from the following comparative figures, showing the respective importations from Japan and Great Britain during the past three months, that both countries have recovered lost ground in January, though the totals are below those for January, 1933:—

	From Great Britain	From Japan
November ...	4,737	3,306
December ...	3,888	2,863
January ...	5,932	5,185
January, 1933 ...	6,340	11,687

GOLD

(By Wire)

(From Our Correspondent)

Bombay, Feb. 23.

Gold rates had two phases during the period. For the first three days, they declined and then revived. London gold price, from its last close of 6/17/5, declined to 6/14/9 but was fixed yesterday at 6/16/5. Franc rate improved from 77.28 to 78.84 and reduced to 77.59. At yesterday's close the sterling-dollar rate similarly improved from 5.05¼ to 5.13½, closing at 5.07⅞.

The local rate declined from 33/15 to 33/5/9 and was again quoted at 33/11/3 last evening.

Calcutta, Feb. 22.

There has not been much change in the gold market during the current week. London gold has remained in the vicinity of Sh. 137, with minor day-to-day changes. The local market has, for the same reason, remained at about Rs. 33-15-0 per tola. Exports of gold from India show diminution and the total export of gold since England went off gold standard amounts to nearly Rs. 170 crores.

London New York cross rate has hovered roundabout 5.06 and London-Paris about 77.5. Sovereigns have ruled at Rs. 21-2. Stocks in Bombay have come down to about 3 lakhs tolas. Distress gold is flowing into the local market, arrivals from Assam being fairly large.

London Air Mail Week:

On January 31st, the gold reserve against notes in the Bank of England amounted to £190,817,659, as compared with £190,817,659, on the previous Wednesday. An event of importance in the week was that President Roosevelt announced on January 31st, that he had signed a proclamation fixing the gold dollar at 59.06 per cent. of its former weight. Thus the new weight of the dollar is 15.5/21 grains, .900 fine. He also announced that the U. S. Government would now buy gold at $35 per fine ounce less the usual mint charges. The regulations for the purchase of gold provide for the acquisition of gold imported after January 30, 1934, and domestic gold, but make an exception with regard to gold which has been hoarded contrary to acts requiring its surrender.

As per expectation this development caused great activity in the gold market. As to the sale of gold the U. S. Treasury announced on February 1, that until further notice gold would be sold for export to foreign Central Banks whenever the dollar exchange with the gold standard currencies reaches the gold export point. The sales would be at $35 per fine ounce plus ¼ per cent. *handling charges.*

In view of uncertainties at first existing as to the extent to which the new regulations would be effective, the official price of gold on February 1, was based on the French franc, being fixed at 135s. 6d., a quotation which included a premium of 1s. 3½d. On the following day, however, the quotation of 139s. 6d. was based more on the dollar than on the franc, whilst on other days the price was governed by supply and demand independently of the exchanges. A new high record for the sterling price of gold has been established *viz.* 140s., the quotation of February 5.

In the open market, the amount of gold dealt in during the week has been extremely large, purchases being mainly for New York. Shipments arranged for this quarter, not only from London but also from the Continent, are of very considerable importance.

The following were the United Kingdom imports and exports of gold registered from midday on the 29th ultimo to midday on the 5th instant:—

SILVER

Calcutta, February 22.

Due to speculative buying in London both by China and India, there was a rise to 20½d. The continued rumours of a reduction in imports duty in India have made the bears cover and prices, therefore, rose to Rs. 61/8 during the middle of the week. Bulls, however, sold freely at the rise both in London and Indian markets, with the result that there was a sharp decline of Re. 1/- towards the close.

Stocks continue to remain more or less unchanged, amounting to 9,000 bars in Bombay and 2,000 bars in Calcutta. The offtake is poor. The trend of the market pending the Budget is very uncertain.

London Air Mail Week :

The feature of the week was the sharp rise in quotations which occurred on the 3rd instant, when 19 15/16d. was fixed for both cash and two months' deliveries, representing an advance of 11/16d. as compared with the price of the previous day. The rise was mainly owing to the absence of selling, so that the market more rapidly responded to buying orders from China. Operations on the whole were moderate on account of the Continent and the Indian Bazaars.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 29th ultimo to mid-day on the 5th instant :—

Imports

TEA

Sale No. 34 was held on February 20, when 3,700 packages of tea with export rights, 5,600 packages of tea for internal consumption and 3,500 packages of dust were sold at annas 0-10-9, 0-5-11 and 0-8-2 per lb. respectively. The offerings now are poor. Demand, however, was quite strong and the offerings comprised of closing invoices.

As for internal consumption, although a much smaller quantity was offered, there was little competition and there was a general fall in prices which ranged from 1 to 1½ annas per lb. Dusts, however, met with a good enquiry but prices declined in sympathy with the leaf market. The market, on the whole, was irregular.

The estimated outturn in Northern India for 1933 season totalled 319 million lbs. as against 369 million lbs. during the previous season.

The following are the full particulars of Sale No. 34 :—

Teas with Export Rights

London:

Average Prices:

The following are the average prices of tea in the London market during the week:—

	Last week	This week
Indian Tea (Northern) ...	14.73d.	14.74d.
Indian Tea (Southern) ...	14.66d.	14.73d.
Ceylon Tea	15.64d.	15.81d.
Java Tea	12.40d.	12.88d.
Sumatra Tea	11.91d.	12.38d.

For Sale Next Week:

Indian 51,700 packages, of which 51,000 are on Garden Account; Ceylon 19,000 packages of which all are on Garden Account.

Java Tea:

At the London auctions on February 15, 6,400 packages of Java and other teas (including Sumatra) were submitted for sale.

There was a good competition. Exportable sorts were *in most request. Tippy teas met with better request.*

The following were the lowest prices fetched during the day's auction:—

	Last auction	To-days auction
Common Pekoe	12¼d.	12d.
Common Broken Pekoe ...	10¾d.	11¾d.
Common Orange Pekoe ...	10½d.	12¾d.
Common B. O. Pekoe ...	11¼d.	12d.
Common B. P. Souchong ...	11½d.	11¾d.

The following are the value prices:—

	Last auction	To-days auction
Clean Common Pekoe ...	12½d.	12¾d.
Clean C. B. Pekoe ...	11⅝d.	11⅞d.
Clean C. O. Pekoe ...	12¾d.	12⅞d.
Clean C. B. O. Pekoe ...	11⅞d.	12⅜d.
Clean C. B. P. Souchong	12d.	12½d.

Indian Tea:

At the London auctions on February 19, 25,700 packages of Indian tea were submitted for sale.

There was an active demand at firm rates. Inferior grades were rather higher.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 13¼d., to-day's auction 13½d. lb.; Common Broken Pekoe last auction 13½d., to-day's auction 13¾d. lb.; Common Orange Pekoe last auction 13¼d., to-day's auction 13½d. lb.; Common Broken Orange Pekoe last auction 13¾d., to-day's auction 13¾d. lb.; Common Broken Pekoe Souchong last auction 13¾d., to-day's auction 14¾d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 13⅝d., to-day's auction 13¾d. lb.; Clean Common Broken Pekoe last auction 13⅞d., to-day's auction 14d. lb.; Clean Common Orange Pekoe last auction 13⅞d., to-day's auction 14⅛d. lb.; Clean Common Broken Orange Pekoe last auction 14d., to-day's auction 14⅛d. lb.; Clean Common Broken Pekoe Souchong last auction 13¾d., to-day's auction 14d. lb.

SUGAR

Calcutta, February 22.

The market during the period under review has ruled steady without any change in prices. The stocks are poor but the enquiry is also poor. Stocks of Java quality are small but the demand is well met by the Indian Sugar.

WHEAT

Calcutta, February 22.

During the current week, the market has ruled quiet but steady without any material change in quotations. The highest and lowest quotations for May Beta were Rs. 3-2 and Rs. 3-1 per md. During the recent rise, there has been heavy selling by "long" holders. The position of the ready is, however, fully steady, the demand from millers continuing unchanged. The prospects of the new crop are fairly good, the harvesting being satisfactory. In spite of good prospects of new crop, there is little room for wheat prices to decline.

Quotations:—

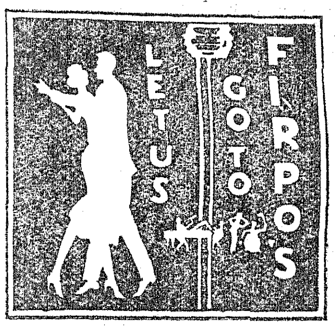
Editorial Comments



INDIVIDUAL LIFE & SOCIAL ORGANISATION.

That political crises and the chaos of political thought are due pre-eminently to the haziness of social purpose and the inability of the electorate to make up its mind over rival ideals was the purport of the two articles which appeared in the issues of February 10 and February 17. An examination of social purposes, as they have emerged to-day, and the alternative means open to society to achieve them may well be expected to provide a clue to many a pressing problem of the times. To adopt the historical approach here as in other matters, we have seen that in every period in which the prevalent political theory seemed adequate to its contemporaries, the social purposes of the time commanded sufficient general acceptance not only to be embodied in the theory, but also to inspire the actual policies of, the State. For instance, to the Greeks, the individual excellence of every citizen, who was capable of realising it, seemed an ideal of sufficient clarity and practicability to inspire a theory of State and a working policy of government. To those who came under Roman rule, the peace which it afforded seemed more than a compensation for the privation which it undoubtedly entailed. The Holy Roman Empire combined the aspiration, born out of a fading memory, to a universal State, with the desire for a unified Christendom and thus satisfied the inmost longings of the peoples of Europe in the Middle Ages. The emergence of the Nationalist State flattered the vanity of the average citizen, who felt that at one stroke he had abolished the domination of the foreign overlord and the privilege of king and nobles. Parliamentary Democracy might, perhaps, be viewed as the most solemn and the most successful make-believe, the leaders believing that they were carrying out the wishes of the people, and the people believing that they were directing governmental policy as they liked.

* * *

That the people in each country felt as one sovereign whole, utilising the resources of organised society for the common good is no small achievement for any age. That the actualities did not coincide with these beliefs is of far less moment. For, when in this discussion we speak of social needs, we necessarily mean the subjective wants of men in society and not their objective needs. A social organisation is influenced by, and works for, the felt needs of society, in so far as those, who feel such needs, are in a position to influence and shape social ideas and policies. The element of power to translate the desire of groups of men into the policies of social organisations, and particularly, the paramount social organisation, the State, is always there; and its importance can never be underrated. And it is of the essence of progress that the number of persons, who are able to give shape to their desires and, in accordance with them, to modify social policy, should be continually on the increase, and with a pronounced acceleration in the rate of increase. Necessarily, in the earlier stages of history, too many of the members of society resigned themselves to their lot or to the lead of powerful or energetic men. With the growth of democratic forms of government, this habit of resignation is progressively weakened. For, the vote is the most powerful solvent of popular fatalism. And democracy brings the conflict of group interests to a head. Nevertheless, it is idle to deny, at any time, the relation between the felt needs of the masses as a whole and forms of government and political theories. For, the masses could not, in the nature of things, have felt the need for anything which was not within the range of the immediately practicable; and once they are conscious of a need, a determined people cannot easily be overawed by governments whose fighting strength was so largely a matter of numbers.

* * *

It may be taken, therefore, that the divergence between social needs and social policy was less in the barbarous and undemocratic past than even in the civilised and self-governing present. Whence comes, then, this new incapacity of society to co-ordinate its desires and give them the definiteness of shape necessary for their being embodied in a practical policy? We have, of course, to make a large allowance for the increased complexities of modern life. More is asked of the State to-day than at any earlier period of history. The idea of a State, which is more than a government, represented by the police force within and the army at the frontier, and pledged to no more than protection of life and property, belongs to the dead past. The vote has necessarily involved for modern governments a number of obligations unknown to their predecessors. But for a herd instinct which brings men together in large distinguishable parties, democracy might well have meant as many different demands as there are heads in the sovereign demos. It is said that, in France, a deputy is expected to do minor jobs at Paris for his prominent constituents in the Provinces. The heady growth in the positive functions of the State is, doubtless, a barier to the simplification of social policies.

* * *

Nevertheless, it stands to reason that, during the earlier periods of history, the State had, broadly speaking, satisfied the aspirations of the people, a condition, which is sadly lacking to-day, whether it be that the people are unable to give shape to their needs or that extraneous controls are preventing their effective formulation. It also stands to reason that, throughout the earlier periods, the average citizen had judged the character and performance of the State from the standpoint of whether it helped or hindered the even tenor of his personal life. The same criterion applied to-day would show up the State as sadly deficient in the requisite qualities of a social organisation. If we attempt to probe into the normal mental attitude of the average citizen towards the State, we might be landed on the larger question of the basis of political obligation. But it is obvious that no State can survive a rude shock to the average man's conceptions of a decent living. Equally obvious is the fact that to the average man, his economic life is far the greater part of life as it comes into his consciousness. Though the State in earlier times never consciously set about providing for the citizen the best possible conditions of economic life, it is still true that in the past, there was far less of economic insecurity than what falls to the lot of the industrial or the agricultural worker to-day; and every time the conditions of living were seriously affected, the classes affected rose in revolt and, generally speaking, succeeded in effecting the adjustments that were necessary to remove the more serious hardships. The modern State prides itself on having opened a richer life to its citizens; but the possibilities of a richer life are naturally found to be the more irritating, as even the old security of economic sustenance has been increasingly undermined during a *regime* of individualistic industrialism.

It is one of the trite commonplaces of political science that society has achieved the profound change from status to contract. No one will deny that the average man cannot be expected to regard the right to contract out of one's livelihood in the same light in which Sir Henry Maine saw in it the essence and epitome of human progress. If the typical industrial worker were asked to choose between his present precarious existence as a free agent and being born into a feudal society with a pre-determined bundle of rights and duties, there is no knowing that he may not choose the latter.

* * *

It is sad to think that, just when it seems possible to bring a full and complete life within reach of one and all, the most elementary condition of life, namely, economic security, has eluded human society. For, politically, freedom was never more of a purely negative conception than in modern times. We have exaggerated the restraints which "status" imposed on men in the past and have made of the negative freedom which was won by the successive revolutions of history an end by itself. Though "status", doubtless, stunted the development of the citizen on more than one side, it did not involve hardships in daily life, which are at all comparable to the insufferable hardships of unemployment. And, for the latter, the right to contract as a free agent is but a poor compensation.

All the earlier theories of State and social organisations were based on the assumption of some scheme of life for the citizen. There can be no doubt that this is most true of Greek polity. Feudal society was an economic, even more than a political, organisation, every man being connected with land in some way or other and no one being allowed to hang lose on the fringes of economic society. The combination of Christendom and Empire served to satisfy the spiritual longings of the masses. Thus, while the Greek polis and the Holy Roman Empire were, at every stage, quite sure of the political and economic status of each individual, the modern State can hardly pretend to have given thought to the problems of the individual as an individual and as the supporter of his dependents. It is no answer to this question to say that the individual is free to exert his best both in the political and in the economic spheres. While the responsibility for the realisation of possibilities can justly, and must always, rest with the individual, it should be possible for the political theorist or the practical statesman to say that in his scheme of social organisation, the individual of average ability will not meet with insuperable obstacles in realising such and such ends. If a question like what we are now considering were posed to the practical statesman or the political theorist, we would very probably be met with dissertations on political individualism and *laissez-faire* economics. And none but the most complacently comfortable would accept these as an answer to our problem.

* * *

We may thus say that the problem of modern society is to outline a definite scheme of life for the average man and organise society in such a way that the social organisation will help its realisation with its certainties and not hinder with its uncertainties. We have need to rescue the notion of individual freedom from its cramping negativity; for, not only has it been sterile of positive good, but it has, during the last one century, bred evils before which society is now nearly powerless. Political and economic machinery have alike come to a standstill. The exaggeration of the value of negative freedom has provoked similar exaggerations in other view-points. The clash of opinions is accentuated. Disinterested thought is buried under an avalanche of interested "isms"; and men of goodwill despair of finding a common ground of action.

AS THE BANKERS SEE IT

Bankers in England, more especially the Chairmen of the "Big Five," have got into the habit, in their annual orations, of surveying the economic and financial position not only of their own country but of the world at large. To some extent this is prompted perhaps by the pardonable desire on their part to remain on the right side of the shareholders whom they address annually once. A shareholder, who attends these periodical meetings in these strenuous days, carries away with him the impression that the bank was up against stupendous difficulties and was saved, by the sagacity and foresight of the capable chairman, from a worse fate than the balance sheet revealed. But these speeches have another and a greater utility. They serve to illume the different phases of public opinion and act as pointers to the Government in deciding their monetary and financial policy. Moreover, these pronouncements have come to be regarded by businessmen and economists all over the world as weighty and fruitful contributions to current economic thought. In the large mass of literature on economics that is being added to the world's store of knowledge, the addresses of Mr. McKenna and others in a like position are assured of an abiding place and compelling value.

* * *

If these speeches revealed a unanimity of outlook they would, indeed, be of undoubted authority. But it is too much to expect that independent surveys of an economic situation as complex and chaotic as the present should not be widely divergent.

The only measure of agreement the eminent bankers have achieved is in their optimism—cautious but unmistakeable about England's internal trade conditions. But one can notice degrees even of this optimism in their speeches. Mr. McKenna feels grateful to the Ottawa Agreement for the trade improvements while Mr. Paton attributes it to the "natural resilience of economic systems rather than to any action on the part of Government."

* * *

As bankers they all had to admit that the easy money conditions were very helpful. But while Mr. McKenna openly championed a policy of inflation for the restoration of trade, Mr. Goodenough was equally emphatic in his denunciation of "managed" currency. While again Mr. Goodenough reiterates his confidence in a free international market for the exchange of goods, Mr. McKenna and Mr. Beckett both agree that specific trade treaties are as far as Great Britain can afford to go under the present circumstances. "Some day the hard lessons of experience," says Mr. Beckett, "will compel the governments of the world to recognise that the fortunes of countries are inter-dependent. But the time is not yet." Mr. Pease voices a warning against State interference in industry and both Mr. Beckett and Mr. Campbell exhort the Government to take up vigorous housing schemes as stimulants to trade.

In their reference to Mr. Roosevelt and his experiment, only Mr. McKenna and Mr. Beckett could afford to be generous. Nor are their methods the same. Mr. Goodenough has criticised Mr. Roosevelt's monetary policy more or less elaborately while Mr. Pease has condensed his views into a few delightfully inoffensive but suggestive paragraphs and leaves the reader to draw his own conclusions. Mr. Campbell, speaking later than the others, points to the disinclination of the dollar to adjust itself to the new parities as a proof of the unsoundness of Mr. Roosevelt's policy.

* * *

It will be no easy task for the Chancellor of the Exchequer to evolve, out of this mass of economic and financial sagacity, a fiscal policy that will be both acceptable to the varied sections of the country and contributive to the public weal. Criticism is useful when it is constructive and is followed by improvement. Let us hope that the pronouncements of these eminent bankers, apart from helping Mr. Roosevelt to see himself as others see him, will lead to a better co-ordination of the national interests and, through this, to a more pronounced and more stabilised world prosperity.

PROVINCIAL PRODIGALS

The provincial budgets so far announced show that the constituents of the coming Federation are still far from having solved the financial problems resulting from the trade depression. Madras and Bombay are, so far, the only provinces which have been able to show a small surplus for the current year and to ensure a fair balance between revenue and expenditure in the coming year. All the others, Bengal, Bihar and Orissa, and Burma have each shown a deficit which bears a disquietingly high proportion to the total revenue. In Bihar and Orissa, the position is further complicated, and the outlook more blackened, by the fact that the revenue estimates were made before the disastrous earthquake of January 15 last; and there can be no doubt that, economically and financially, the earthquake has left the province in a state of utter paralysis that must continue for nearly a decade. The problems of Burma concern us less, inasmuch as there is little or no chance of that province being incorporated in the coming Federation. Bengal is well in a position to become a byeword for impecuniosity; and her only hope rests on a readjustment of the allocation of the revenues between the provinces and the central government, to which the Hon. Mr. Woodhead has now added the wish that the central government and the other provinces should agree to give a kind of retrospective effect to the new financial settlement.

* * *

The sources, from which Bengal expects a replenishment of her resources, are none too fertile, judging from the financial statements of the Provincial governments. And the question, therefore, arises whether the financial repercussions of the present depression on the position of the provinces would not complicate, to an almost insoluble degree, the problem of our future federal finance. A careful scrutiny of the speeches of all the Finance Members shows clearly that apart from such charges of extravagance in details as we might make against each provincial government, the provincial budget in India as such affords very little scope for readjustments of revenue and expenditure when they become necessary as a result of a crisis like the present. Though the methods by which the central budget recovered from the shocking deficits of two years ago are open to criticism on various grounds, it is still noteworthy that it has been possible for the Finance Member of the Government of India to ensure a rough balance in the central budget and that the provincial governments have, as a rule, singularly failed in this task.

* * *

The reasons for this disparity are not far to seek. In the first place, the magnitude of the central budget affords greater scope for economies and the heads of revenue which are assigned to the central government also possess a greater degree of elasticity than those which have been left for the provincial governments to tap. Nevertheless, the achievement of Madras in this matter exposes other provincial governments to the charge that they have not shown themselves as keen in avoiding huge deficits as the Southern Presidency has done. It will be recommended that Madras was the first province to take timely measures to effect substantial retrenchment; and though it might be open for other governments to say that Madras enjoys distinct advantages over them in some respects, it cannot be denied that, if in provinces like Bengal and Bombay, the retrenchment in ordinary administrative expenditure had been effected earlier, the financial mechanism would have been more within control than it is now. It is up to the central

PUBLICATIONS OF THE LEAGUE OF NATIONS

Just out WORLD ECONOMIC SURVEY, 1932-33

348 pages ... ... Price: bound in cloth Rs. 5 8 0

The Survey for 1932-33 begins with a description of the revival of economic activity in the autumn of 1932 after the Lausanne Conference and covers the period up till the close of the first session of the Monetary and Economic Conference at London twelve months later. The story is thus brought up to the end of July 1933.

As in the previous Survey adequate use is made of statistical information regarding prices, production, international trade, public finance, wages, employment, profits, etc. collected from all over the world by the Economic Intelligence Service of the League of Nations. Despite the wealth of material thus made available, the Survey, like its predecessor, is a clear and connected story of recent developments valuable to the specialist for its scope and accuracy, and equally to the layman because of its clarity.

The American banking crisis, the movement towards reduction of hours, the situation regarding international indebtedness, the magnitude of agricultural stocks compared with current production, the decline in international trade, the recent rise in prices and recovery of production, are among the subjects of topical interest surveyed in this volume.

WORLD PRODUCTION AND PRICES, 1925-32

155 pages ... ... Price: Rs. 2 12 0

This volume contains an analysis of the changes in the world output and stocks of raw materials and foodstuffs, in the world's industrial activity and, finally, of price movements and relationships. It includes the index number of world production of raw materials and foodstuffs calculated by the Economic Intelligence Service of the League and international index of industrial production, together with abundant statistical material, *e.g.*, national industrial production indices for some 20 countries, data comparing production of investment and consumers goods, and indices of activity of some 15 important groups of industry in a large number of countries.

The chapter on prices contains an analysis of the movement of wholesale prices in various groups of countries; comparisons are made between the evolution of gold and sterling prices, raw materials and finished products, international and domestic goods, investment and consumption goods, etc.

The chapters on production cover the years 1925-1932, and, where possible, the first quarter of 1933. The discussion of price movements has, where figures were available, been brought up to May, 1933.

Complete catalogue sent free on application.

government now to ensure that the provincial governments leave no stone unturned to balance the budgets or at least to reduce the deficits that they are now incurring. Otherwise in the financial adjustments that will have to be made before the inauguration of the Federation, the Government would be faced with well nigh insoluble problems. A foretaste of such problems has already been afforded by Mr. Woodhead's suggestion that, in the settlement to come, Bengal should be granted retrospective credit for all excess of expenditure over revenue during the years of the depression.

PROVINCIAL BUDGETS

Of the three Presidencies, Bengal has the distinction of presenting a grossly unbalanced budget. Not only has it been impossible to balance revenue and expenditure; but, year after year, it has been found that the budget estimates of revenue had ben too optimistic while, on the expenditure side, at least law and order had accounted for a progressive and, to some extent, unforeseen rise. If one is to use the word "stabilise" in connection with the Bengal budget, one has only to say that it has been very nearly stabilised on the basis of an annual deficit of Rs. 2 crores. In refreshing contrast to the relation between budget estimates and revised estimates, the actuals for 1932-33 show an allround improvement on the revised estimates for the year. The actual receipts of Rs. 10,26,49,000 were in excess of anticipation by Rs. 2,39,000, a decrease of Rs. 4,70,000 under receipts on revenue account being more than offset by an increase of Rs. 7,09,000 in the receipts on capital account. On the expenditure side the total actual expenditure of Rs. 11,12,70,000 on revenue and capital account was less by Rs. 16,96,000 than the revised estimate of Rs. 11,29,66,000. The net result was that, after providing for a closing balance of Rs. 12,93,000 for the Famine Relief Fund, the deficit on the year stood at Rs. 99,47,000, an improvement of Rs. 18,87,000 over the figure anticipated in the revised estimates.

* * *

But the old story is repeated when we come to compare the revised estimates for the current year with the budget estimates of this time last year. In the revised estimates, the receipts on revenue account are placed at Rs. 8,96.56 lakhs, which is Rs. 14.97 lakhs less than the budget estimates, and which, on the authority of the Finance Member, is a new low level, being Rs. 90 lakhs below even that of the year 1922-23. On capital account, a fall of Rs. 13.36 lakhs is anticipated and taking both revenue and capital receipts together, the revised estimates provide for a total revenue, exclusive of the advance to cover the deficit, of Rs. 9,51,71,000, a figure which is lower by Rs. 28,63,000 than that anticipated when the budget was framed. This fall in revenue has, however, been more than offset by a reduction in expenditure; it is now anticipated that the total expenditure on revenue and capital account will be Rs. 57,71,000 less than the budget figure. The net result as regards the present year is that the Finance Member expects to close with a deficit of Rs. 1,80,17,000, instead of Rs. 2,09,66,000 as originally estimated.

* * *

In making the estimates for 1934-35, the Finance Member is less pronouncedly optimistic than on previous occasions.

After allowing for an improvement of Rs. 8½ lakhs under Excise and Rs. 6 lakhs under Stamps, the total receipts on revenue account in the coming year have been placed at Rs. 9,07,47,000 as against the revised estimate of Rs. 8,96,56,000 for the present year, an increase of approximately Rs. 11 lakhs.

Exclusive of the advance to be taken to cover the anticipated deficit, the estimate of the total receipts on revenue and capital accounts stands at Rs. 9,64,05,000.

As regards expenditure, the estimates provide for an expenditure on revenue account of Rs. 11,29,17,000.

An increase of expenditure of Rs. 34½ lakhs spread over a number of budget heads hardly calls for comment. Those who value, above all, the financial soundness of the provincial government will only fasten on the fact that the budget estimates for 1934-35 disclose a deficit on revenue account of approximately Rs. 2¼ crores against revenue receipts of just over Rs. 9 crores; in other words, the anticipated deficit amounts to about 25 per cent. of the present income.

* * *

It might be conceded, in fairness to the Government of Bengal, that, though in the past their record of financial administration was not unexceptionable, a position has now been reached when reorganisation of the finances could be taken on hand only with the assurance of more expanded revenues such as a reconsideration of the financial settlement could afford to this province. But many may feel that the justice of demanding that the past deficits should be made good is by no means as obvious as that of the claim to a more favourable settlement in the future.

* * *

Turning to Bombay, the most conspicuous feature of the financial statement is the brevity of the Finance Member's speech. Sir Ghulam Hussain has been content with a mere reference to the difficulties of the past and the achievement that the Government are now able to claim for themselves. It is, indeed, very gratifying that the promise, which the Finance Member made this time last year, namely, that the budgeted deficit of Rs. 28 lakhs could be made good before the time comes for the presentation of the revised estimates, has been made good. It should be remembered that a surplus of Rs. 4 lakhs has been estimated for the current year, after providing for debt repayment of Rs. 12 lakhs, which did not figure at all in the original budget estimates. The expenditure for 1934-35 is placed at Rs. 14,92 lakhs. Both Bombay and Bengal are at one in that they have arrived at a position in which there is little scope for financial policy as such and one has only to see whether the balance is on the right side or the wrong.

* * *

By reason of its marked difference from Bombay and Bengal in the respects mentioned above, the Madras Budget calls for a more detailed consideration than is possible in our omnibus review of provincial budgets. For, Madras is now in the position in which it might reasonably consider the wisdom of risking a deficit for a year or two with a view to strengthen the economic position of the ryot, a step which is somewhat analogus to the suggestion which Mr. Keynes made some time ago to the Chancellor of the Exchequer and the British Government. Into this question, we cannot afford to go at present. Suffice it here that the deficit years for Madras were very much less than in other provinces or in the Central Government and that all the three sets of figures usually presented in a budget show a balance on the right side. The position is best understood from the following table :—

		Accounts 1932-33	Revised Estimates 1933 34	Budget Estimates 1934-35
		(In lakhs of Rs)		
Revenue	...	1,685.89	1,628.27	1,643.63
Expenditure	...	1,608.68	1,627.66	1,639.17
Surplus	...	77.21	.61	4.46

We hope to do justice to the larger financial problems of the Southern Presidency such as land revenue remission, capital schemes and Part II Expenditure, in our next issue.

The other two provincial budgets, which remain to be reviewed this week, are those of Bihar and Orissa, and Burma. The estimates presented by the Hon. Babu Nirsu Narayan Sinha in the Bihar Legislative Council have little or no practical value as a forecast of the financial conditions of Bihar and Orissa during the coming year, or even, for the matter of that, the current year, of which there are only six weeks to run out. The earthquake of January 15, has wrought such havoc on all kinds of property within the province that no reasonable estimate of its revenue-yielding capacity can be made at present. And the Finance Member has frankly admitted that the estimates were made before the earthquake and that, as there was no time to make the requisite changes, even if they could possibly be gauged, the original estimates were being presented intact to the Council. It might, therefore, be said that the financial statement of the Government of Bihar and Orissa is altogether divorced from reality.

* * *

Nevertheless, the statement of the Hon. Mr. Sinha is valuable as showing that Bihar and Orissa is no inconspicuous exception to the general tendency of provincial governments in India to carry on under a grossly unbalanced financial position. If the year 1934-35 should show, even in the pre-earthquake estimates, a deficit of Rs. 5 lakhs, it may easily be imagined what is in store for this hapless province. The revised revenue for the current year is to be at Rs. 5,01 lakhs or Rs. 8 lakhs less than the budget estimates made last February. And it compares with Rs. 5,04 lakhs, the revised, and Rs. 5,06 lakhs, the actual, for last year. As for the current year, the revenue is estimated at Rs. 5,22 lakhs and expenditure charged to revenue Rs. 5,37 lakhs. These figures include amounts which arise from mere changes in accounting procedure; and the Finance Member has helped the public to understand the true position by pointing out that, shorn of these unrealities, the revenue of 1934-35 must be put at Rs. 5,05½ lakhs and expenditure at Rs. 530 lakhs. The net result of 1934-35, as it was forecast when the estimates were made, would be a reduction in the closing balance by Rs. 23 lakhs. At present the revenue balances of the Government which stood at Rs. 1,01 lakhs on April 1, 1930, has been more than wiped out. It may easily be guessed that, in a situation like this, the Finance Member is driven to deplore the highly inelastic character of the revenues assigned to him—a tale that is becoming increasingly familiar in Indian finance. While the public will not grudge Hon. Mr. Sinha the sympathy that is his due in a predicament like this, it would also be highly disturbed by certain policies to which Mr. Sinha has unfortunately shown definite leanings. It would appear that the Finance Member bases his hopes of expansion in revenue on the possibility of increase in the excise duties, especially those from opium and other articles injurious to public health and morals. Considering that any increase, that is possible in these items in such depressed conditions as now obtain in Bihar and Orissa, would be but a drop in the ocean, it would be well if the Hon. Mr. Sinha has spared the public the shock which his efforts to increase the consumption of opium undoubtedly have administered.

* * * *

Burma comes as a good second to Bengal in the magnitude of its annual deficits. The revised estimates for 1933-34 disclose a deficit of Rs. 1,18 lakhs which would be met by borrowing from the provincial loan fund of the Government of India. Revenue for the current year was originally estimated at Rs. 9,80.03 lakhs and the disbursements at Rs. 9,73.26 lakhs. It was believed, when the estimates were made in February last, that produce prices would rise. But as is well-known, the year has seen further drops in commodity prices; and what is more, rice which is the staple product of Burma has singularly failed to partake in such improvement in the commodity markets as has occurred during what has now come to be called the revival. Likewise, it is urged that estimates of expenditure were framed on the basis that the 10 per cent. cut in salaries would be continued through the current financial year also and that the decision to reduce the cut to 5 per cent. involved the Government of Burma in an expenditure, for which they were originally not prepared. The result of these disturbances is that the receipts are now estimated at Rs. 8,64.90 lakhs and disbursements at Rs. 9,82.73 lakhs, leaving a deficit of Rs. 1,17.83 lakhs. As for the year 1934-35, the receipts, including the opening balance of Rs. 80,000, are put at Rs. 8,52.22 lakhs and expenditure at Rs. 9,37.70 lakhs, with a resultant deficit of Rs. 85.78 lakhs. The Government apparently are not

yet clear how this deficit is going to be met; but it is tacitly assumed that a loan from the provincial loan fund of Rs. 85½ lakhs would ultimately be secured from the Government of India. It is well that in a position like this the Government have not budgetted for any increase in revenue as such, their optimism being confined to the expectation of quicker realisations of land revenue than in the past.

RAILWAY BUDGET

In presenting the Railway Budget for 1934-35, Sir Joseph Bhore in the Lower House and Sir Guthrie Russell in the Upper House could not hide their two-fold satisfaction that, in the first place, their task was much less gloomy than in the past year and that, in the second place, the prophesy they made a year ago appears to be substantially justified. The very first paragraph in the speech of the Railway Member gives expression to this gratification. While presenting the 1933-34 budget which was the first railway budget of Sir Joseph, he ventured to suggest that, though the encircling economic gloom showed no tangible sign of lightening, indications were not wanting that the Indian railways had plumbed the depths of the depression which had overtaken them in common with the rest of the world. The opinion thus expressed was guarded enough. Even so, a good few critics were of the view that the slightly more hopeful outlook of the Railway Member was unwarranted by anything more substantial than a facile optimism. Sir Joseph is, therefore, happy that his critics have been proved wrong and he himself proved a correct prophet. It is with pardonable pride that he advances the following claim :

> "Though our estimates of receipts for the year may not eventually be reached, it is a matter for some gratification to find that our anticipations of improvement have been substantially justified and that our earnings up to date show a material advance over those for the corresponding period of the previous year".

Feeling bucked up by the results during the ten months of this financial year, he not only makes a better showing with the revised estimates for 1933-34 but he plans his estimates for 1934-35 on a basis of subdued optimism. Without casting any doubts on the wisdom of budgetting for increased earnings in the next year, we should say that the developments within the past three years have been of so tantalising a character that optimism however guarded has, in not a few occasions, been falsified. When we say this, we do not at all mean to suggest that the Railway Member was not justified in planning the estimates as he did. For our part, we shall not blame him if the events of the next year should prove as awry and unfavourable as those of 1932-33, resulting in Sir Joseph Bhore having to appear before the House with a sadder tale than on the present occasion. The makers of budgets are in a peculiarly unhappy and difficult position in the current financial situation. And when we are suggesting the possibility of estimates now made being falsified by unexpected developments, we are only drawing pointed attention to the difficulty experienced by framers of budgets in this regard.

* * * *

Sir Guthrie Russell, while fully alive to the strain and stress imposed on the railways by these difficult times, is at pains to show that amongst the railway concerns of the world, the Indian Railways are in an exceptionally strong position. He would like to be in the happy position of being the Managing Director of the "Indian Railway Companies Limited" rather than the Chief Commissioner of the Railway Board. If he were a Managing Director of this description and if his Company had only ordinary shares but no debentures or preference shares, he claims, on the basis of the anticipations in respect of next year's earnings, that he would be in a position to pay a dividend of about 3½ per cent. on the shares of the Company which he controls. And as the borrowing rate of the Government of India is now, judged by the present level of gilt-edge prices, in the neighbourhood of 3.8 per cent. to 3.9 per cent., Sir Guthrie expects that the ordinary shares of a first class public utility concern giving an yield of 3½ per cent. should be standing "at par, if not at a premium." This is the picture of the Indian Railways which he draws. We may now look at the other picture which he gives us of the railways in other parts of the world :

> "The gross receipts of the four amalgamated British Railways in 1932 amounted to £165 millions, or £15 millions (8%) less than in 1931 and £42½ millions (21%) less than in 1929. The Canadian Pacific Railways in 1932 earned $122 which was $18 millions (13%) less than in the previous year and $86 millions (40%) less than in 1929. The Canadian National Railways earned $161 millions in 1932, or $39 millions (19%) less than in 1931 and $107 millions (40%) less than in 1929. The receipts for the principal Railways in the United States of America were $3,160 millions in 1932. This was 25% less than in 1931 and 50% less than in 1929. For the German State Railways in 1932 the expenses exceeded their earnings, and their earnings fell off 24% as compared with the year 1931 and 36% as compared with the year 1930".

Not only is the position of the Railways from the point of view of capitalisation and dividend returns satisfactory, but those in charge of the working of the railways are giving a good account of themselves and have proved themselves highly mindful of their great responsibility—this is another statement of Sir Guthrie, which he seeks to prove by comparing the

BUDGET BALANCED–BUT HOW ?

IMPREGNABLE STRENGTH OF WAYS AND MEANS

GOOD AUGURY FOR GILTEDGE

In reviewing the proposals of Sir George Schuster for his last Budget, we should, at the outset, congratulate him on the lucidity and clarity of presentation and on the care and adroitness with which he has elaborated his chief points. His speech, covering fifty pages of printed matter, is so fluent in diction, so naive and simple in elucidation, and so gripping in interest that, at the end of reading it, one wishes he had elaborated, with his characteristic directness and fullness, the many other points to which he could make but passing reference. We frankly confess that not only is Sir George lucid but his arguments are in the highest persuasive vein.

The first impression produced by his speech is that whatever Sir George has done, he has done right. If he raids on the Sinking Fund, he has established an answerable case for the raid. If the surpluses are arrived at only by a makeshift, the makeshift is most apt for the occasion. If he has had to devise additional taxes, he has planned them in a scientific way and with a thorough appreciation not only of present conditions but of future needs. If he wishes to reduce the floating debt, he makes us agree that this is part of a sound and scientific financial policy. On the other hand, if he wishes to enlarge the floating debt, he appears equally convincing that the very structure of the Indian money market requires a larger volume of Treasury Bills for its smooth and efficient functioning. Othello won Desdemona by his brave and direct narration of the troubles he had passed through and of the experiences he had encountered. Sir George will likewise win many Desdemonas amongst his hearers by the tale he unfolds of the monsters he had to encounter in the way and of the simple and manly heroism which he has displayed.

We may have had abler Finance Members but we have never had one who treated us to such masterly performances in the speaking line, as Sir George Schuster has done. In paying this tribute, we do not intend to imply that this is all the compliment he deserves. The Budget, on cold analysis, reveals a good few points on which we cannot see eye to eye with Sir George ; at the same time, we should emphasise that there are a good many other points in which we are in entire agreement with him. All circumstances taken into consideration, Sir George is certainly entitled to the gratitude of this country for the way in which he has put in his best in his task. He has taken himself and his task most seriously. He never spared himself or his lieutenants or staff. He has been a demon for work. He has always realised that a Finance Member in modern conditions has to be more than a framer of budget. From the beginning of his career, he has shown that whatever contributes to the betterment of national economy must engage the thought and attention of the custodian of finances. He has underlined and emphasised the conceptions handed to him in this regard by his illustrious predecessor, Sir Basil Blackett.

We may now proceed to a detailed discussion of the actuals for 1932-33, revised estimates for 1933-34, and the budget estimates for 1934-35. The final accounts for the last year show, after providing Rs. 6.84 crores for reduction of debt, a surplus of Rs. 1.55 crores. 1932-33 was covered by the Emergency Budget which was announced in September 1931 ; and the latter provided for a two-year period as a single unit, the years in question being 1931-32 and 1932-33. It is, therefore, necessary to study the actuals for 1932-33 in conjunction with the actuals for 1931-32 and in relation to the forecasts in the emergency plan of 1931. The final accounts for 1931-32 showed a deficit of Rs. 4.86 crores without providing for any contribution towards reduction or avoidance of debt ; the corresponding figure in the actuals of 1932-33 is Rs. 8.39 crores. Sir George, therefore, claims that "the net result is that, over the two years combined, we not only paid our way so far as budgetary income and expenditure is concerned, but in addition provided a sum of Rs. 3.53 crores for reduction of debt".

What were the forecasts made by the Finance Member in September, 1931 ? He then anticipated, after allowing for the normal provision for reduction of debt, a deficit of Rs. 10.17 crores for 1931-32 to be followed by a surplus of Rs. 5.23 crores for 1932-33 ; the net amount available for the reduction of debt in the two years, after allowing for the deficiency on the combined results, was estimated to be Rs. 9.11 crores. It will thus be seen that compared to the anticipations in the emergency plan, the actuals for the two years covered in that plan show a worsening of Rs. 5½ crores. In his speech last year, Sir George anticipated that the net amount available for the reduction of debt on the basis of the revised figures for 1932-33 would be Rs. 4.15 crores. As against the original anticipation of Rs. 9.11 crores as the sum available for the reduction of debt, and as against the revised figure of Rs. 4.15 crores, the actuals yielded only Rs. 3.53 crores for this purpose. This does not seem to us to be an achievement which could evoke any great enthusiasm.

The results of those two years, which were marked by loudly advertised schemes of economy and retrenchment, and blatanty-enforced taxes on an onerous scale, have evidently compelled the Finance Member to come to the conclusion that these heroic measures were not producing the intended effects and that discretion would suggest the more prosaic course of reducing the annual contribution from revenue towards the reduction or avoidance of debt. The convention evolved in 1924 is scrapped ; and Sir George suggests a new formula that a lump provision of Rs. 3 crores should be made annually for the reduction of debt..

The Finance Member is at great pains to show that it is neither reasonable nor even advantageous to make an attempt to raise tax revenue sufficiently to meet the original provision. He gives an elaborate review of the position as regards the public debt, credit and currency reserves and his object is to underline his conclusion that the financial position of the Government has been so strengthened that it is not necessary to strain the tax revenue in order to meet the provision for the reduction or avoidance of debt at the full level fixed by the convention of 1924. Having decided on this change, Sir George has no difficulty in stating the next stage in this facile process ; and the next stage is that the change should have retrospective effect, that is, it will also be applicable to 1933-34.

In spite of the elaborate pleading and despite the rosy picture of Government finances which Sir George has painted and with a good part of which we are also in agreement, we cannot but think that this summary alteration of the 1924 convention is nothing more and nothing less than a "raid on the sinking fund." The claim that canons of puritanic finance are being observed in so far as the budget is to be balanced is hardly consistent with the assertion that a well-conceived plan of sinking fund arrangement can be lightly tampered with. We should not, however, be understood as saying that Sir Basil Blackett's plan should not be revised at any time in the future. All that we imply is that the balancing of the budget which Sir George has achieved is something different from the spirit of a balanced budget.

However, we are not greatly concerned, much less perturbed, by this raid on the sinking fund. The way in which the sums available in the Debt Redemption Fund were being utilised by the Finance Department was so futile, so unscientific and so unprofitable that there was every case for freeing the budget from this heavy burden until and unless arrangements in this behalf were linked with the credit policy and credit operations of the Government on an intelligent and fruitful basis. Sir George has, again and again, spoken vehemently against the use of the Debt Redemption Fund for open-market purchases of securities with a view to lend support to the market on those occasions when prices tend to sag unduly. Holding a view of this kind, the large-sized contribution which was made annually from current revenue was put to no effective use. The plea that we have been urging is that while Sir George used this provision for the avoidance of debt, it should be utilised for the reduction of debt. As there was this fundamental difference and as we are convinced that, in the hands of Sir George, the Debt Redemption Fund was as good as useless, we, for our part, do not regret the reduction of the annual contribution to Rs. 3 crores.

Now, taking note of this changed procedure, that is, after providing Rs. 3 crores for debt reduction, the revised estimates for 1933-34 show a surplus of Rs. 1.29 crores. The Finance Member proposes to set aside this sum as a special fund to cover relief measures in respect of earthquake damage.

We may now turn to the budget estimates of 1934-35. Basing his assumptions on the net figures of revenue and expenditure, Sir George expects that the budgetry position would be Rs. 2.80 crores worse than that revealed in the revised estimate of 1933-34. It has already been pointed out that the revised figures for the current year are expected to show a surplus of Rs. 1.29 crores. Sir George has had, therefore, to find means of improving the position to the extent of Rs. 1.53 crores if he was to provide an even balance for 1934-35. At this stage, we must refer to the new taxation proposals.

(1) Sir George proposes an excise duty of Rs. 1/5/- per cwt. on factory-produce sugar in India. This is expected to yield Rs. 1.47 crores, of which Rs. 7 lakhs is to be placed at the disposal of the sugar-producing provinces for assisting the organisation and operation of co-operative societies among the cane-growers so as to help them in securing fair prices, or for other purposes directed to the same end.

(2) There is to be a slight increase in the duty on raw tobacco and a reduction in the duty on cigarettes. The Finance Member calculates that the combined effect of these two alterations would be to increase by about Rs. 30 lakhs the very reduced revenue which must otherwise be anticipated.

(3) Import duty on silver is to be reduced from 7½ as. per ounce to 5 as. per ounce. This is to result in an increase of Rs. 5 lakhs in the estimates.

(4) The export duty on hides, which now stands at 5 per cent., is to be abolished, while the export duty on skins will continue. The loss of revenue on this account would be Rs. 5 lakhs.

(5) The postage on post-cards is to continue at the present level of nine pies. The initial weight of inland letters is to be reduced to ½ tola and the charge is to be Rs. -/1/-. For heavier letters, the charges will continue to be 1¼ as. for letters not exceeding 2½ tolas, with additional 1¼ as. for successive weights of 2½ tolas or fractions. As regards ordinary telegrams, it is proposed to impose a minimum charge for a telegram of 8 words, for nine annas while that for an express telegram of the same length will be Rs. 1-2. For additional words, the present charges will be applicable. The re-organisation of the rates will mean a loss of Rs. 27.34 lakhs which is to be made up by a raid on the Depreciation Fund of this department. These proposals, namely, Sugar Excise net revenue Rs. 1,40 lakhs, Tobacco duties Rs. 30 lakhs, Silver Rs. 4 lakhs, less the loss of Rs. 5 lakhs on the abolition of the export duty on raw hides, should produce a net improvement in revenue of Rs. 1,69 crores, which will cover the deficiency of Rs. 1,53 crores and leave a small surplus of Rs. 16 lakhs.

This completes Sir George's plan so far as the Central Budget is concerned but he has put forward another important proposal which stands more or less on an independent footing.

The Government of India, concurring with the findings of the White paper, have decided to hand over half the export duty to the jute producing provinces. The resources for this purposes are to be obtained by the imposition of an excise duty of Rs. 2-4 per gross on matches. As for the export duty on jute, it is expected to be Rs. 1.90 crores next year. After allowing for a small sum of Rs. 1 lakh to cover cost of collection, the balance of Rs. 1,89 lakhs if divided in proportion to the average rate of production over the past five years would give about Rs. 1,67 lakhs to Bengal, about Rs. 12½ lakhs to Bihar and Orissa and about Rs. 9½ lakhs to Assam. As for the match excise, a great majority of the Indian States have signified their willingness to enter into an agreement under which every State in which matches are made, or in which they are in future to to be made, will levy a corresponding tax, paying the proceeds into a common pool along with the proceeds of the British Indian Tax; and the amounts of this pool will be devided on an estimated consumption basis between British India and all the States that have entered into this agreement. At the same time, some compensation had to be given to the Government of Burma who are now getting revenue from a consumption duty at the rate of twelve annas per gross on boxes of matches manufactured in or inported into Burma. This duty is to be repealed. The total proceeds of the excise duty for the whole of India are estimated at Rs. 3 crores. Out of this on the population basis about Rs. 70 lakhs will be distributable among the States, leaving Rs. 2,30 lakhs for British India. It will not, however, be possible to introduce the scheme so as to recover more than eleven months revenue during the first year, so that the net revenue for British India according to budget estimates for next year will be only about Rs. 2,10 lakhs. After deducting Rs. 18 lakhs for Burma, this leaves a balance of Rs. 1,92 lakhs which is only Rs. 3 lakhs more than 1,89 lakhs to be distributed on account of half the jute export duty. If this Rs. 3 lakhs is retained by the Central Government the surplus of Rs. 16 lakhs to which we have referred in an earlier passage will be increased to Rs. 19 lakhs. It may be added that the import duty on matches is to be increased correspondingly so as to maintain the existing measures of protection for the Indian industry.

In regard to the budget proposals for 1934-35, we believe that the process of Shrinkage in customs revenue has gone to such an extent and the estimates for the coming year are made on such a shrunken basis that this tax head is not likely to present any untoward development when the new Finance Member will have to tell his tale in the coming year. It also seems to us that the estimates under other tax heads have been made on a conservative basis; and we do not look forward to any worsening in the revised figures that will be announced next February. The budget estimates may, therefore, be said to be on an extremely reliable footing. If anything, there is every likelihood of the revised figures making a better showing than the budget figures. There would certainly be no unpleasant surprise in this regard.

We may now proceed to discuss the ways and means budget, a theme which enables us to offer the most gorgeous bouquets to Sir George Schuster. We must reserve, to a later issue, a detailed discussion of the ways and means position as revealed in the Finance Member's proposals. We would content ourselves with drawing attention to those features which are of immediate and paramount importance to the money market. Owing to the conversion operations of these two years, the borrowing programme of the Government has been vastly reduced in size and greatly simplified in responsibility. The floating and short-term debt position at the end of September 1931 showed a total debt of Rs. 336.55 crores maturing within five years. This will have been reduced to Rs. 165.96 crores by March 31, 1934. Of the latter sum of Rs. 165.96 crores, the Treasury Bills with the public and those with the currency reserve, which amount to Rs. 47.75 crores, raise no problem at all. The Rupee loans maturing in five years amount only to Rs. 79.21 crores; this means an annual average of Rs. 16 crores, which is quite a manageable sum for the capacity of the Indian capital market. Sterling loans in the five-year period amount to the equivalent of Rs. 39 crores. This also can cause no embarrassment whatsoever.

The result is that, for the coming year, an extraordinarily strong ways and means position will enable the Finance Member to dispense with borrowing altogether. The capital programme is on the low side. The Government have already dealt with all the loans, the maturing dates of which afforded them an opportunity of converting them. The only security that has to be dealt with in 1934-35 is 4½ per cent. 1934 bonds, of which only Rs. 13 crores has to be redeemed. In England there is nothing. The entire capital requirements as well as the entire requirements for the repayment of the 4½ per cent. bonds will be found from the receipts under Postal Cash Certificates and Savings Bank Deposits, and from the accruals in the Debt Redemption Fund, Depreciation, Reserve, Provident and other funds.

The outstanding feature of the ways and means budget is that there will be no New Loan either in India or in London, either for cash or conversion. Rarely has the ways and means budget from the point of view of the borrowing needs presented a position of such impregnable strength. Of course, if securities, as a result of this favourable position, showed a substantial rise, thereby enabling the Government to convert on a cheaper basis, the Government may tackle the 4 per cent. 1934-37 loan (Rs. 19.54 crores), 5 per cent. 1935 bonds (Rs. 11.43 crores) and 6½ per cent. 1935 bonds (Rs. 16 crores). Likewise, the sterling loans amounting to £29 millions and repayable at the Government's option in 1935 and 1936 may be suitably dealt with. All this is contingent upon the borrowing rate being well below 4 per cent.

During the year, the external reserves have been greatly fortified because of the large-scale remittances. This has meant a replacement of *ad hoc* securities in the Paper Currency Reserve and an increase in the borrowings from the public. If conditions in regard to remittances as well as in regard to the giltedge market are as favourable as the intrinsic strength of ways and means position would justify, further fortification of the external reserves is not unlikely. But the main point is that the ways and means budget for 1934-35 constitutes the most powerful bullish factor for the securities of the Government of India both in this country and in London.

operating ratio of Indian railways with those of some foreign railways.

* * *

Owing to an important change in the form of the estimates, a comparative study of the three years covered in a budget speech has been rendered somewhat difficult. A note-worthy change in form is in connection with the inclusion of the receipts and expenditure of lines belonging to private Companies or Indian States, but worked by the Indian State Railway systems for a percentage of the gross earnings. It was Sir Arthur Dickinson who recommended this change in procedure, which has been approved by the Standing Finance Committee for Railways. The practice hitherto followed and the objections thereto are thus explained by Sir Joseph :

> "The practice hitherto followed was to deduct both the receipts and expenditure of these lines from the total receipts and expenditure of the system by which they were administered. This procedure, as pointed out by Sir Arthur Dickinson, is fundamentally wrong in principle as the officials of a railway system are engaged in operating all the lines comprising that system, including these worked portions, and the statistics and accounts should properly be based on the total receipts and expenditure of the entire system."

Without taking note, for purposes of comparison, the effect of the new method, the position is that the actuals for 1932-33 show gross traffic receipts at Rs. 84.43 crores and total expenditure (including Depreciation) at Rs. 62.85 crores; the revised estimates for 1933-34 show total receipts at Rs. 86.50 crores and total expenditure at Rs. 63.04 crores; and the budget estimates for 1934-35 anticipate total receipts at Rs. 91¼ crores and total expenditure at Rs. 64½ crores. The nett traffic receipts, thus, show a progressive increase from Rs. 21½ crores in 1932-33, which was the lowest since the separation of Railway finance from general finance, to over Rs. 28 crores in 1934-35. After sundry adjustments, the nett revenue is as follows : Rs. 22.68 crores in 1932-33, Rs. 24.62 crores in 1933-34 and Rs. 26.75 crores in 1934-35. While there has been a satisfactory expansion in revenue, the next item of importance on the expenditure side, which is "interest charges," has been on a slightly lower grade, due to the reduction of the borrowing rate for the Government of India. Interest charges accounted for Rs. 32.91 crores in the actuals of 1932-33, while revised estmiates provide only for Rs. 32.40 crores for 1933-34 and the budget estimate for 1934-35 anticipated a further reduction to Rs. 32.05 crores. The deficit has, accordingly, come down by nearly Rs. 5 crores. Last year resulted in a realised deficit of Rs. 10.23 crores; the current year, it is anticipated, will bring down the deficit to Rs. 7.78 crores; and the figure for next year at Rs. 5.30 crores shows the more favourable prospects anticipated.

* * *

Up to 1929-30, the Railways were yielding a surplus. 1930-31 was the first deficit year in the post-Separation period. In the five years ending March 31, 1935, the total deficits are expected to aggregate to Rs. 37.70 crores. A deficit of this description should not be considered except in relation to two important facts, namely, (1) the Railways have been providing every year for a depreciation of between Rs. 13 to 13¾ crores towards the Depreciation Fund, during each of the deficit years; and (2) the accruals in the Depreciation Fund have considerably exceeded the withdrawals from that fund during these five years. The deficits have, therefore, been met by the Railways from out of their own resources. The position in this regard is thus elucidated in the following paragraph taken from the "Explanatory Memorandum" attached to the Railway Budget.

> "In addition, they have set apart from current revenues during all these years, including not only the first six fat years but also the next five lean years, an amount calculated to represent the depreciation on wasting assets during the year. The amount thus set apart has every year exceeded considerably the actual amount required to be withdrawn from the fund for that part of the cost of renewals and replacements carried out during the period which, under the rules of the fund, is debitable to it. The total appropriations to the depreciation reserve fund in the eleven years beginning with 1924-25 amount to Rs. 135 crores, whereas the sums withdrawn are expected to amount to Rs. 95 crores. It is this balance of Rs. 39 crores which has enabled railways to meet their deficits without outside borrowing."

The works programme for 1934-35 is on a somewhat more ambitious scale. The total outlay is expected to be Rs. 14 crores, of which Rs. 70 lakhs would be found by a further reduction in stores balances; Rs. 8.67 crores will be utilised from the Depreciation Fund, and the balance will represent the actual new capital required. The amount is quite within the ability of the Railways to provide for. There is the surplus of payments into the Depreciation Fund over the withdrawals. There is also the usual accumulation in the Provident and other funds of the Railways. It would, therefore, be unnecessary for the Railways to have recourse to the Central Government for the financing of their capital works. Sir Joseph Bhore has, thus, considerably lightened the task of Sir George Schuster as regards the ways and means problems which the latter would have to discuss when he discloses his budget proposals on February 27. It may now be assumed that owing to the self-sufficiency of the Railways in regard to the capital programme proposed for 1934-35, Sir George himself might have to provide only for the conversion of the maturing loans. He may not come to the market for any new money at all. This is certainly a bullish feature of great significance to the gilt-edge market. Sir Joseph, himself well aware of this circumstance, anticipates that the interest charges payable by him to the Central Government would be less in 1934-35 than they were in 1933-34, owing to the likelihood of a lower borrowing rate for the Government of India in the next financial year. The buoyant conditions that have prevailed in the gilt-edge market for the last two months are, from this point of view, fully justified. There has been, in the current week, a tremendous acceleration in the pace of rising gilt-edge values. If the Government do nothing to upset the gilt-edge market, there is no reason why Sir Joseph's hope of lower interest charges should not materialise in the coming fiscal year.

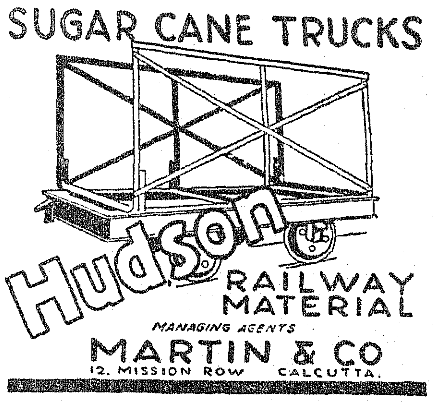
Clive Street Gossip



In a series of talks in this Section, I dealt with the case for and against the Managing Agency system; and the plea that was urged is for a more fruitful utilisation of the services of good Managing Agents and for the establishment of such a system as would bring all bad Managing Agents to a swift and sure end. Of the uses of the system, I had no doubt; and I have never hesitated or grudged to make a full acknowledgment of the great part which Managing Agents have played in the industrial growth of the country. I have not differed from the conclusion of the Industrial Commission that "the system is in many ways well-adapted to present conditions in India and has a far greater list of successes to its credit than can be shown by ordinary company management under individual managing directors." In fact, I referred to a case where the Managing Director could exercise powers as arbitrary and control as effective, and enjoy possession as undisturbed as would be the case if there had been a Managing Agent. At the same time, I was definitely of the view that, in the kind of conditions that have now come to exist, the abuses to which the Managing Agency system is inherently liable are apt to assert themselves and altogether overshadow such uses as there had been and there might continue to be. By all means, let us drink to the health, long life and prosperity of Managing Agents. But let us make sure that the Managing Agents, to whose longevity and well-being we drink the toast, can be only good and worthy people.

* * *

It is curious that this series in the Gossip Section appeared roundabout the time when the Tariff Board Members should have been considering and discussing the recommendations amongst themselves. It is even more curious that the views of the Board are in the nature of a *via-media*, the same as were mine. The Board recognised, as I have been saying over and over again, that the Managing Agent as such appears to find no place in the Indian Company Law. At the same time, they are struck by the fact that he fills a very large place in the industrial system of the country. In other words, the key position in Indian industry is held by an authority who derives no sanction from the existing law. In the absence of precise and specific obligations imposed by law on Managing Agents, the latter have come to occupy the enviable position of having no responsibility and enjoying all privileges. It is true that in the early days, voluntary restrictions and standards of conduct on the part of Managing Agents did duty for statutory control, but these restrictions and standards have, in many cases, yielded place to gross and unscrupulous conceptions of self-profit. It is also true that the closest sense of personal identity between a Managing Agent and his Company still actuates the best type of Agent; but this is also fast disappearing. Again, it is true that the Managing Agent in the discharge of his duties is supposed to be controlled and have his transactions scrutinised by Directors. But what is this control worth when the agreement between the Managing Agent and the Company entitles the former to hold office indefinitely for unduly long periods and when, therefore, the control by Directors is necessarily lacking the sanction of removal from office in cases of serious misbehaviour or incompetence?

* * *

Equally is it true that the Articles of Association confer, on the shareholders, the right of appointing directors. The Tariff Board examine this right in some detail and, without saying it in so many words, come to the conclusion that it is shadowy.

> "Allowing for the number of directors nominated by managing agents and of special and debenture directors and also for the fact that only a limited number of vacancies occur each year, the extent to which the shareholder can actually exercise this right is restricted, particularly in view of the short period generally allowed for nomination to vacancies in the directorate. We do not suggest that all directorships should be thrown open for election at the same time or that due provision should not be made for continuity of policy and management. Restriction in matters of this kind are even of greater importance in business than in public administration. What we do suggest is that the necessity for restrictions of this kind deprives the contention that the shareholder can exercise sufficient influence over the management through the directorate of a good deal of its force".

What is the remedy for this state of affairs in which the system has undoubtedly given rise to practices which deserve serious condemnation? While admitting that there are agents who, in spite of unparalleled difficulties and temptations, have maintained the highest standards of business rectitude and probity, the Tariff Board believe that it is to the extent that opportunities can be provided for the influence of the better class of managing agent to make itself felt throughout the industry that the situation can be most effectively remedied. In this regard the Bombay Millowners' Association owes it to itself and its members to do all that is possible for the creation

of a strong public opinion which would act as the most effective check on unhealthy practices. The Board also pay a tribute to the great service rendered by the Bombay Shareholders' Association. "We believe that the activities of the Association have been of considerable public advantage in as much as they have stimulated among investors a keen consciousness of their rights as against managing agents. Increased co-operation between managing agents and organised bodies representing the interests of shareholders will be a valuable means of checking abuses and of inspiring confidence among investors."

* * *

In this connection, it has to be considered whether the charges which have been levelled and, in many cases, proved against managing agents could be made unlikely in a set of new conditions created by the millowners organising voluntary action among themselves. It is true that, in the last resort, the most effective means of checking the abuses is the growth of a high standard of probity amongst the interests concerned. But is there any hope that the millowners will bestir themselves in this direction and take active steps for the creation of a healthy and strong public opinion? So far as one can see from developments that have hitherto taken place, the good managing agents have practically taken no steps to protect themselves and their system against the stigma and odium that have come to be associated therewith as a result of the vagaries and whimsicalities of incompetent and dishonourable managing agents. In other words, there is the utmost necessity for early and comprehensive legislative action. Such action is all the more necessary when it is remembered that the Indian Companies' Act is so obsolete and out of tune with actual conditions of industry, that there is, in the scores of clauses, no mention whatsoever of managing agents who, admittedly, occupy a position of power and patronage and privilege. "These circumstances clearly point to the necessity for bringing the system of managing agents under scrutiny with a view to such amendment of Company Law as may be required."

* * *

The Central Banking Enquiry Committee had also a great deal to say on the utility or otherwise of the managing agency system. The respective advantages, the admitted uses and proven abuses were all considered by the Banking Committee whose final conclusion in this matter was that "attempts should be made to make industrial enterprises in India less dependent on this system for future development." Mr. Manu Subedar, who had the unique distinction of having a minority report entirely on his own, gave expression to his views in terms characteristically vehement and pointed. He has no doubt that this system is old-fashioned and has out-lived its utility. The weaker and less desirable side could not be considered the rule but is, Mr. Subedar is firmly convinced, "inherent in the system." No one is in a position to know whether the Government, who, at the time of the creation of the Banking Committee, used to speak of it in flamboyant terms, are at all likely to take any action on a report drawn up by a Chairman in whom they have had abiding confidence at all times. One could, however, assume that, since the report has been in the hands of the Finance Member and his colleagues for over two years, they should be giving it at least some measure of attention and consideration. The Tariff Board suggest that as the Banking Committee report should be now engaging the consideration of the Government, it would be a convenient procedure "if the materials required for ascertaining what changes may be necessary in this regard in the law relating to company management are placed before the Government at the same time."

* * *

This is a matter on which no hasty conclusions can be arrived at. The sifting of a large mass of relevant materials will be necessary. There should also be a preliminary investigation of an elaborate character; and the Board suggest that a committee should be appointed "as early as possible" to enquire into the necessity for effecting such changes in the Company's Law as would result in a better control over managing agents. At the same time, a warning is uttered that a plea of the constitutional question monopolising all attention at the present moment should not be put forward as a pretext for procrastination. "It is important that the necessary preliminary investigation should be taken on hand as soon as possible." It is time the Government realise their responsibility and their obligation in this matter. If the capital market in India has continued shy and unresponsive to the floatations of industrial enterprises, the Government are as much to blame as the uneducated investors whose earlier experience has been none too encouraging. The following passage should be read and re-read by the Commerce Member as administering a reproach and impressing a lesson :

> "The State has an inherent duty in every country to safeguard the interests of investors and this duty is rendered more imperative wherever a policy of protection is in force. Unless reasonable steps are taken to ensure that the investor shares the benefits of protection, the progress of industries which is bound up with the confidence felt by the investor will be necessarily hampered. We, therefore, think that there should be no avoidable delay in instituting the enquiry we have proposed".

The Tariff Board have, in the course of one paragraph, used phrases like "as soon as possible", "as early as possible", and "no avoidable delay" in three separate sentences in order to impress on the Government the serious view that they take of the imperative and urgent need of Company reform. Will this wake up the Lotos-eaters?

IN THE

"ANANDA VIKATAN"

THE VERNACULAR WEEKLY WITH THE
LARGEST CIRCULATION IN INDIA

NETT CERTIFIED SALES EXCEED 47,500 COPIES PER WEEK

Mr. Advertiser :

These facts will interest you:

Every home in Southern India buys the *Ananda Vikatan* regularly.

47,500 copies and more of each issue are sold. (See Auditor's Certificate.)

It is the only Vernacular (Tamil) Journal which publishes Auditor's Sales Certificates.

The Circulation of the *Ananda Vikatan* is larger than the combined circulation of any five other vernacular Journals in South India.

Except the very poor and the illiterate, there is no class or Section of the public which is not reached by the *Ananda Vikatan*.

Every buyer of the *Ananda Vikatan* ***keeps*** his copy since otherwise he cannot participate in the Lucky Number Scheme under which substantial money prizes are offered to readers.

The advertisement charges in the *Ananda Vikatan* are cheaper per 1000 copies sold than those of any other reputable paper in India.

DO YOURSELF A GOOD TURN** by writing for **TERMS AND LITERATURE.

MAKE THIS MAP YOUR GUIDE TO BETTER BUSINESS

50,000 families buy the *Ananda Vikatan* every week.
250,000 people read it every week.
More than 300 Sole Agents and 2,000 Selling Centres.

IF ENGLAND WERE INDIA

By G. L. M.

[Papers reported recently that the Government of Great Britain have decided to advance £3,000,000 to the Cunard and the White Star Lines for the construction of a giant Cunard liner of 73,000 tonnage whose construction was stopped in December, 1931.

But if England were India, it is not difficult to imagine what turn the Parliamentary debate would take if a non-Government member moved a motion recommending such a grant. The following picture is the result of such speculation.]

In the House of Commons to-day, *Mr. Benjamin Jadhav (Liberal-Clyde)* moved a resolution recommending that the Government should grant a loan of £100,000, (one lakh sterling only) to assist the construction of a big steamer on the Clyde ship-yard, whose building could not be proceeded with owing to lack of funds and difficulty of insuring the vessel. The mover pointed out that when all other nations were subsidising their shipping not only for commercial reasons but as a matter of high policy, it was time that the Government of Great Britain stopped the step-motherly treatment of their own key industry and the Mother of Parliaments began to nurse her grown-up children so that the children of the soil might find avenues of employment. It was this lack of suitable employment which was driving their young men to creeds like Bolshevism, Fascism and Pelmanism and unless immediate action was taken, more and more young men would be driven to become vegetarians. (Opposition cheers).

The speaker quoted extensively from the majority report of the British Mercantile Marine Committee which had recommended the reservation not only of the coasting trade of Britain including Scotland and Wales, if not Ulster, but also the entire imperial coasting trade for British shipping. This report was published twenty years ago but what action had been taken on it? Was it thrown into the wastepaper basket as usual or was it merely decorating the archives of the Department concerned? What they wanted was not merely lip-sympathy but palm-movement for British combined with leg-action towards non-British interests. Government could find money for administering Newfoundland, for building new cruisers and battleships in pursuance of the programme of disarmament, for subsidising aviation to attain parity and even to pay Indians for their annual joy-rides on Conferences and Committees to this country but they could not find money for assisting a national industry like shipping which was literally "at sea" and whose sinking funds could not prevent its rapid sinking. He appealed to Sir Joseph Runciman whose sympathetic attitude was widely appreciated to accept the motion.

Mr. Austen Holmes Ghuznavi (Conservative-Newcastle) who had brought models of American and Japanese ships which he displayed on his bench emphatically opposed the resolution. He said that England's going off the gold standard had given her a distinct advantage over other countries on gold basis and the subsidies given by several other countries were merely to equalise the conditions with Britain. Japan, Norway, Sweden and Denmark were able to run their ships far more economically than England and it was no use bolstering up inefficiency by cheap sentiment of "national industry in danger." If to believe in the survival of the fittest and international division of labour was contrary to tenets of patriotism he was not a patriot. His love for consumers far exceeded Mr. Gandhi's professions of love for the untouchables. He desired to encourage consumption on the best terms even by stopping all industrial production in this country, if necessary. He wanted to know how many men from Newcastle were employed in this ship-yard and this Company and also how many Roman Catholics and non-Conformists.

Producing two lumps of coal from his two pockets, Mr. Austen Ghuznavi observed that not only was very obnoxious favouritism being exhibited in the purchase of coal for the British Navy as will be apparent from an inspection of the two samples he was showing them, but British steamers were obtaining their bunker requirements not from Newcastle-on-Tyne or Newcastle-under-Lyme as they ought to but from South Wales which was highly objectionable. It clearly showed that Newcastle was being exploited to benefit a small coterie in Clyde just as in cotton textile they were exploited by Lancashire and in steel by Sheffield.

Sir Cowasjee Clare-Lees (Liberal-Burnley-Lancashire) in giving his qualified and cautious support to the resolution strongly objected to the remarks of the last speaker. He said that had it not been for Lancashire, there would have been no colonial market for cotton piecegoods, no British shipping and probably no British Empire—now more appropriately called the Commonwealth of British Nations. He opined that the proposal to confine the imports of cotton and exports of cotton piecegoods only to British ships was impracticable; on the other hand, the scheme for purchasing only British-made piecegoods for uniforms of mercantile marine and naval and civil officers was worth exploring.

Mr. Bernays Das (Radical-Torquay) enquired whether the member for Burnley was himself not dressed in a Parisian suit.

The Speaker deplored personal references to dress, food, drink, etc. He also stated that when the question of protection to steel was to be considered, members should not bring corrugated sheets, joists, beams, bars and angles on the floor of the House. They could be displayed in the Library.

Continuing *Sir Cowasjee Clare-Lees* said that they had proved by their recent agreement with Bombay and their negotiations with Japan that they did not place patriotism above business interests in all cases as alleged by the Member from Newcastle. Their love for their motherland was not only circumscribed by their sense of law and order but by their clear recognition of the economic realities of the situation. After all, they could not revive British shipping overnight. The road to prosperity was a hard and strenuous one. It required inherited wealth, apart from ability.

Sir Joseph Runciman (President of the Board of Trade), while expressing Government's sympathy for the object underlying the policy indicated in the trend of the resolution, regretted his inability to accept the motion in the form put forward and was compelled to oppose it. He outlined what the Government had done to assist British shipping since the war and said that the question was receiving the very careful, not to say anxious, consideration of the Cabinet. They had already appointed three Committees on the various questions relating to this subject in consultation with the Chamber of Shipping and other interests affected. Their conclusions were now being studied by small Departmental Committees. He took this opportunity of paying a tribute to the care and ability with which these public men conducted their work as well as to the able staff of permanent officials who were privately investigating into these questions. (Loud cheers).

The subject involved several technical issues which need to be cleared up before the main question of policy could be aproached. For instance, it was the definite opinion of one of his predecessors that reservation of the coasting trade involved discrimination, recrimination, incrimination, expropriation, appropriation, confiscation and composition. On the other hand, its application to imperial trade would lead to retaliation with serious repercussions. The proposal to grant subsidies to tramps, had been disapproved by Liners and was financially impossible at present. The suggestion to levy differential dues on foreign subsidised shipping was a supplication whose implications and complications could hardly be realised and foreseen even by a clear-sighted and far-sighted Cabinet like the present one. The Government were giving mail subsidies on certain routes: was not that enough?

Some of the British shipping companies had entered into a pool with foreign companies in regard to the South-American route as well as speed agreements in the Atlantic and rate arrangements in the North Sea. Was not all this encouraging? Some wheat importers had decided to ship as far as possible by British ships. Questions like scrapping of old tonnage, laying-up of surplus tonnage and regulation of building programme, have been under consideration of the internatioanl organisations of shipping for the last few years. Were not these tendencies definitely hopeful? While assuring the industry that Government would continue to take a sympathetic interest in its well-being, provided the industry itself continued to exist, he could not hold out any hope of early financial or legislative assistance.

Mr. N. M. Lansbury (*Labour-Birmingham*) could not support a resolution of this nature although he was in agreement with its purpose, namely the development of a British mercantile marine. He asked in what sense could the Company concerned be described as a "national" company? Had the nation as represented by the Government any control over its activities, its profits, its scale of wages? Did the State have any Directors on its Board, did it contribute to the share capital or lay down maximum limits of rates of fares and freights? Why should the State subsidise one private company over which the tax-payer had no control and in whose affairs he had no voice? Did those who are assisted even guarantee to employ only British seamen? When it suited them, they forgot their patriotism and employed Chinese or even Indian lascars. The only way out was to nationalise their mercantile marine and the Government should own and manage it. Failing this, the consumers, the passengers and the tax-payers should not all be penalised to prop up an industry which had to face world-competition while hitherto it had certain initial advantages.

Mr. Amarnath Dodds (*National—Liverpool*) opposed the resolution. He said that there was no reason to favour Clyde when Liverpool, Hull, Cardiff and Belfast were all suffering equally. The Tyne was in a worse plight and its ship-yards lay idle for years but the Scotch who ruled England had always a stronger "pull" and so they won every time. He disagreed with the Member for Newcastle about the benefits derived from the abandonment of the gold standard. He quoted the opinion of the well-known scientist Sir Oliver Lodge that it was definitely disastrous for British industries and he had held that chemically there was no difference between gold and any other metal. Sir James Jeans, the famous astronomer, had declared that from the cosmic point of view, it was immaterial whether we starved after being on gold basis like civilised people or without it like the barbarian. He said Liverpool men were not adequately employed in Clyde and Lancashire and until Liverpool could produce beet-root sugar, he would oppose a bounty to sugar industry. He enquired whether the member for Clyde did not hold shares in the Company whose cause he was so disinterestedly advocating.

Mr. Neville Schuster (*Chancellor of Exchequer*) in winding up welcomed the debate which had proved interesting and assured the House that the suggestions varying from rationalisation to nationalisation would be carefully considered by the Cabinet. He said that the resolution involved a serious question of principle, namely, whether Government could assist one or two particular firms without being flooded with similar applications and proposals not only from other shipping companies but from private firms in other industrial spheres as well? If they granted this request, however urgent and necessary the conditions might be, it would constitute a precedent. And Government have to be very careful before they allowed any precedents to be formed. In fact, in nine cases out of ten, that was why they never took any action, lest by taking action they would allow that action to constitute a precedent. The art of governing consisted in knowing as many precedents as possible and in establishing as few precedents as absolutely essential. He denied that any mistake had been made in going off gold standard in 1931. Everything depended on the month in which one went off or on the gold standard. It would have been wrong to do so in June when the Labour Government wanted but indisputably right when the National Government did it in September. Look at America! She went off it last March and within a year she had to come back to it!

As regards shipping, let us never forget that shipping is a subsidiary industry and depends ultimately on the movement of passengers and goods including raw materials and bullion from India and civilians, experts and manufactured goods to colonies and dependencies. A ship can no more create cargo than can gold or silver be eaten. It is the international trade depression which is ultimately responsible for the present deplorable plight of British shipping and the surest way to cure the present trade slump was to revive trade. (Ministerial cheers). There was no other remedy. There were no short-cuts to balancing the budget except restoration of cuts in salaries. To secure this revival of world-trade, a world-outlook was necesary. It was, therefore, risky to dissipate the fund of international goodwill which was their precious possession at present by adopting remedies like subsidies or differential dues or discriminatory treamtent of non-British industries. We should depend upon the time-factor to work out its destined programme so as to evolve new solutions for the present difficulties which will cease to appear as such in historical retrospect. Let us work together and make of every impediment an inducement to renewed efforts and every obstacle an opportunity to concerted co-operation. (Loud cheers).

The resolution was put to vote and defeated by 375 votes to 28 votes.

OLYMPUS

(From Our Correspondent)

February 21.

Railway Budget Debate but poor copy: Separate Ministry for Transport?: Sir Joseph Bhore's tactics: Budget speculations as lively as ever: Taxpayer's impending Doom.

Yesterday's debate on the Railway Budget disclosed what appeared to be a conspiracy. To have a member for railways as distinct from that for Commerce! As usual each one is looking at the matter from his own angle.

* * *

Sir Henry Gidney thinks that when the portfolio is split up, an European will be appointed to be in charge of Railways and as such the Anglo-Indian subordinates may have a better chance than under an Indian Member.

* * *

Sir Joseph Bhore feels that the charge is too heavy for one member. In fact he has had, I gather, no time to prepare his budget speech and has been mostly content with the usual formal phraseology of the Secretariat.

* * *

The European group back the scheme because they want the rail-road question to be tackled by a Ministry for Transport which will protect the vested interests of the community.

* * *

The Indian parties like to have a Member for Communication because Indian commercial and political opinion has always said so.

* * *

The Secretary of State, I am told, wanted to have some such expression of opinion and a despatch will shortly be sent to him by the Government of India by Air Mail communicating the "country-wide" desire for a Department for Transport. Who knows, the despatch may have already been drafted in anticipation of the Assembly opinion so that it should now be a question of days before it can be officially forwarded to London.

* * *

The General Debate had very little thrill except when Sir Joseph Bhore quoted from a speech of Dr. Ziauddin Ahmed of last year and Sir Joseph's reply to it showing where the Depreciation Fund lay. Why put the same question to get the same answer, he asked? The House enjoyed the fun but there was no rejoinder.

* * *

If Sir Joseph Bhore's speeches are looked into and a census is taken of proposals which "will receive sympathetic consideration" and of matters which "will be looked into", it will be found that Sir Joseph has indulged in these too often. His answer may be that he has no time to run the Department as thoroughly as he would like but the fact that grievances are repeated year after year only shows that hardly any redress is forthcoming.

* * *

Sir George Schuster has an equally naive and effective device. He is in the habit of inviting members to meet him in his rooms when he would be only too glad to explain everything to the satisfaction of the curious-minded folk. One may wonder, however, if it is only curiosity which accounts for the non-official thirst for information and the doubtings about official allegations. In my young days, the Librarian in the college was rather worried over a Principal who used to query this item or that and otherwise pose numberless questions to be answered by the Librarian. "The Principal is of a questionable nature"—declared the custodian of books whose education remained singularly unaffected by his hourly contact with the store of knowledge. Our Assembly Members are, certainly, of a questioning nature. Some of their questions are, however, of a questionable nature.

* * *

The important questions which were raised by Mr. Ramaswamy Mudaliar were evaded in the Railway Member's answer. Why postpone a revision of the Depreciation Fund rules which apparently are on an unduly extravagant basis, till the new constitution? No good answer. Why select N.W.R., the most costly run railway in India, for experimenting with lower third class fares? Why not M.S.M.? The answer came "until we know the result of the experiment we cannot launch on another".

* * *

That the affairs of a gigantic concern as the railways should produce such a dull "copy" passes my comprehension. Imagination is lacking somewhere. "Why advertise donkeys of Delhi and asses of Simla in your Publicity Bureaus in London and New York?" Mr. Ramaswamy Mudaliar expressed his belief in tourist traffic which was keeping alive a whole Mediterranean coast in the South of Europe. But it must be done well.

* * *

But when I complain of the lack of imagination, it is mainly a journalistic grouse. The business of railways is being run on sound lines. Far better than in the days of Brobdingnagian capital programme. Now every item is properly scrutinised and nothing passes the Financial Commissioner unless the expenditure is justified. There is also lesser complaint regarding railway appointments being parcelled out for political and communal consideration.

* * *

The General Budget will be presented on February 27. Sir George Schuster is making a heroic effort to balance the budget. Retrenchment schemes have no more to yield. Extra taxation has to be imposed. How and where?

* * *

Once again the old struggles are revived. Should it be enhancement of salt tax? Should gold export be taxed or silver import be taxed less to yield more? Should tobacco be taxed? Should the sugar industry be burdened with an excise duty? Or with excise duty and corresponding increase in import duty?

* * * *

You don't need to be in anybody's confidence to speculate on all this. There is, as at present, no other field to look forward to for fresh revenues. Which one of these will Sir George select? Will he use all these weapons? Or only some of them?

* * * *

The Finance Member is determined *not* to juggle with figures. He must have a really balanced budget and if he becomes unpopular he is prepared to face it. He thinks he owes it to the country to put the finances in order; to ask for greater sacrifices to keep the Central Government's finances solvent.

* * * *

And the ever-troubling problem of the customs revenue is there. So many tariff changes are being introduced in quick succession that their results in terms of returns must largely be a gamble.

Really the central finances are not sound. And there is no way of making them sound *under the present regime* except by extra taxation! It has been the fashion to claim that India's finances are sounder than those of most countries. The budget is awry; but ways and means is, for a good time to come, on an unassailable basis.

"HILL-BIRD"

THE GATEWAY OF INDIA

(From Our Correspondent)

Bombay, February 21.

Bombay's woes are by now an epic, with episodes that are interesting in themselves and fit in admirably in the framework of the whole story. Ever since its commercial magnates secured the appointment of a Tariff Board to examine the conditions of its staple industry, it has had an unenviable share of the limelight in the stage of Indian economy. And the Board's disclosures about the advantages which other centres of the cotton industry enjoy over Bombay have been the starting point of more and more, till to-day we are confronted with the threat of the extinction of Bombay as a major port. For some time, it was known that the trade of Bombay was being deflected, in increasing measure, to the ports of Kathiawar. A phenomenon like this should normally have created much disquiet in the minds of the commercial community, the Government and the local bodies which depend on the flourishing sea-borne trade of the city for their revenues.

The import trade of Bombay was the first to suffer from the diversion of trade to the ports of the Indian States. Only a month ago, a prominent official of the Bombay Port Trust was impelled to clarify the position in respect of the differential advantages of Bombay and her rival ports in the matter of the import trade. And he endeavoured to make out that the interests of the Bombay Port had not been sufficiently safeguarded in the arrangements that had been arrived at between the Government of India and the Indian States concerned. Though such States are bound to levy the same rates of customs duties as are applicable in British Indian ports, it has been found that the ports of the States are in a position to offer importers substantial advantages by way of lower port dues. The official of the Bombay Port Trust referred to suggested, at the time, that the dues levied by the ports of the States did not fully cover the charges incurred by the ports in providing the requisite facilities and that, therefore, the inducement that the States offered to the import trade was in the nature of unfair competition with Bombay. Knowing as we do the uneconomic nature of port administration in British India, we might, without being unfair, well suggest that it is up to the authorities of the Bombay Port Trust to reduce their expenditure and pass on the savings to the mercantile community.

Nevertheless, the presence of an element of unfair competition in this may be granted. When the States found that thanks to the differences in the levies at the ports, the trade of Bombay was being deflected in increasing measure to their own ports, they had naturally every inducement to persist in the policy of levying uneconomic port dues. What they lose in this regard might well be made up by the increase in the volume of traffic and by the expansion of the trade in imported articles enjoyed by the States. It is an incontestable fact to-day that much of Bombay's natural hinterland is being served in the matter of imports by her rival ports on the Western Coast.

Owing to a lethargy, which would be inexplicable in any other country and which perhaps needs no explanation in this, no action was taken to ward off this incalculable danger to the prosperity of the Second City of the Empire. And it was not till the cotton trade was seriously affected that the Government chose to intervene in the matter. On February 14, a conference was held at the Bombay Secretariat under the presidency of His Excellency, the Governor. It was found that cotton, which was always being shipped through Bombay, is now finding its way through Kathiawar ports, to avoid the Town duty and the Port Trust charges. But the immediate attention of the public and all those concerned was drawn by the efforts made by the G.I.P. Railway to help the traders to unload their cotton at Mumbra, a station some 20 miles off Bombay, from where it is taken to the Thana Creek to be conveyed by country crafts and loaded in ships right in the stream off Bombay Harbour and finally shipped either to U. K. or Japan.

The reason for this diversion of cotton from Bombay is thus clear. The cotton merchants who are suffering from heavy charges of transport naturally seek to save about Rs. 3 per bale. They find that the F.O.B. cost of cotton *via* Bombay is 2 to 4 per cent. higher than *via* Bhavanagar or Mumbra. Further freight from Bhavanagar to Japan and U. K. is not available at present. The Town duty which is levied in transit *via* Bombay and which accounts for Re. 1 is, perhaps, the heaviest charge on the bill of cost of transport.

The history of the Town duty is interesting in this connection. It dates back to 1920, when a bill imposing this levy was passed in the local Legislative Council. The proceeds of this duty were shared by the Government and the Corporation in the proportion of 4 to 3. The Government utilised the proceeds for the building of quarters for industrial workers in the Worli Chawls. Though the building scheme was not completed, the levy lasted ; and it has remained to this day, when it can no longer be borne by the cotton trade. No serious complaint about it was made on the part of the cotton merchants, so long as trade was thriving. But the position is now radically different. The Tariff Board, in their report of 1926, also referred to this duty and recommended its reduction to at least eight annas. Though the Government did not show any unwillingness in this regard, the Corporation stood in the way of reduction.

The seriousness of the situation is realised by the magnitude of the loss that is entailed. The cotton trade is, by right, Bombay's own and its loss will mean, besides, loss of prestige and pride, loss of income to the numerous small traders and brokers attached to it. The futures market in cotton is important to growers as it anticipates demand and helps to regulate production. More than all, the loss of revenue to the Government and the Corporation at a time when they are hard put to it to balance their budgets, is big enough to cause serious embarrassment. To take the example of the Corporation only, its budget estimate for 1933-34 provided for a revenue of Rs. 12 lakhs from cotton duties ; and within six months it was realised that the estimates had gone wrong and the Municipal Commissioner had to revise the figure to Rs. 8¾ lakhs.

The situation, serious as it is, is one capable of becoming dangerous to Bombay and its interests. As yet only part of the cotton is diverted to Bhavanagar ; but if the matter is left untackled and substantial reductions are not made in the transport charges, it may mean the total loss of the cotton trade to Bombay. It is suggested that the Town duty should be abolished *in toto*. Though this will not help the financial situation of the Government and the Municipality, it will at least help to retain the trade for Bombay and all the importance that it confers on this city. Secondly, the Port Trust should make every endeavour to reduce its charges as far as possible. And lastly, it devolves upon the Railways—the G.I.P., B.B.C.I., and the C.I. Railways—not only to reduce freight charges but so to adjust the respective rates of each railway as to bring them on a uniform scale.

Thus the problem can be tackled only by the co-ordination and co-operation of the Government, the Railways and the Port Trust. The Conference that was held at the Secretariat, it is understood, was representative of all these interests ; but no decision has as yet been arrived at. It is also under-

stood that the question is deferred until His Excellency confers with the Viceroy at Delhi when a final decision will be made.

It is gratifying that the Government have taken the initiative in this matter; and considering the gravity of the situation, it is to be hoped they will lose no time in arriving at a decision. The first step in this direction, it is clear, will have to be the abolition of the Town duty. The hope that the Government will not hesitate to do so, is strengthened by the feeling that only recently they refused to sanction the proposal of a terminal tax on passengers arriving in the city by rail or by sea.. The proposed terminal tax is very much like the Town duty in its incidence, with the exception that while the former affects the free flow of passengers, the latter has its effect on goods. The Government of India's policy, it is believed, is not to favour any transit duties which impede the free flow of trade or traffic.

"WATCHMAN"

SOUTH INDIA

(From Our Correspondent)

Madras, Feb. 21.

The Government of Madras have taken the first step to combat the acute fall in the prices by providing in their 1934-35 Budget for the appointment of a Provincial Marketing Board, which would work for the improvement of the facilities for the marketing of agricultural products. This Board would be assisted by a Provincial marketing officer. The appointment of a special officer to collect the preliminary data for the Board to work upon is also contemplated. In fact, acting on the suggestion of the Director of Agriculture, the Government have already sanctioned the appointment of a special officer with the necessary establishment for a period of not more than three months from 1st March, 1934, to investigate the conditions of marketing rice, the qualities and the volume of production and to draw up a report. The Agent to the South Indian Railway has extended, until further notice, the concession of the rates of freight on rice exported to Colombo. This, the Government are optimistic enough to believe, would encourage export trade.

The Government have tentatively included in their items of business for the coming Council Session, the Co-operative Land Mortgage Banks Bill. The object of the measure is "to facilitate the working of the Co-operative Land Mortgage Banks in the Presidency, in order to provide for the grant of long-term loans to owners with a view to enable them to discharge their debts, to carry out agricultural improvements, to acquire land for the formation of economic holdings and other like purposes." A clause secures the Government guarantee of interest on debentures issued by the Board on strength of the mortgages. A Select Committee has already discussed the Bill and submitted its report.

The need for drastic reform is nowhere so vitally felt as in the case of the agriculturalists. This is not surprising as agriculture is the staple occupation of the people of India. The present economic depression, accentuated by the peculiar disabilities that obtain in the Madras Presidency, has hit them hard. In this land of essentially small holdings, the alarming fall of prices and the indifferent marketing facilities have aggravated the situation. Besides, Japan, always on the alert for new markets, has begun to import cheap rice. It may be that rice of a higher quality still possesses a market; but that in no way eases the situation. The labouring population in the urban areas can hardly be expected to go in for the costlier variety. The import duty on Japanese rice is little calculated to ease the position of the producers of lower grades of paddy. When it is fondly hoped that the concession on freight charges would encourage export trade, there is the imminent danger of the home market being captured by foreign producers, leaving India of all countries, dependent upon external sources for her foodstuffs.

Desperate situations call for desperate remedies. It is difficult to understand the half-hearted policy of the Government. They admit that it is a matter of the greatest importance to do away with rural indebtedness. They propose some active legislation; yet, at the same time, they press for the payment of the revenue, which they hold to be their right share, from land. True, they have made a small remission but that is after all a mere drop in the ocean. Man and nature, the latter by way of cyclones and floods, have combined to destroy the crops in the various centres. The cultivators, naturally, are unable to pay and, therefore, complain. The demand for a 25 per cent. remission is very just. It is the duty of a democratic and high principled Government to accede to this popular demand. Even this remission would not go far to alleviate agricultural distress. It looks as though the Government are treating the symptoms instead of tackling the root of the disease. A more fundamental change is necessary. The confusion that is now rampant with regard to the relation between the ryot and the Government, has to be removed as early as possible and better understanding arrived at. The Joint-Parliamentary Committee has expressed itself strongly on this point. They advise that "the process of revising the land revenue assessment ought to be brought under closer regulation by statute as soon as possible. . . . . . No branch of the administration is regulated with greater elaborateness or care but the people most affected have no voice in the shaping of the system and the rules are often obscure and imperfectly understood by those who apply them. The Committee are of opinion that the time has come to embody (in statute) the main principles by which land revenue is determined, the method of valuation, the time of assessment, the periods of revision, the graduation of enhancement and other chief processes, which touch the well-being of revenue payers."

GREAT BRITAIN

Mr. Colin Campbell's annual speech: Disarmament or Re-armament?: Cunard-White Star Merger: Tariff War with France? Anglo-Soviet Trade Treaty: Is Unemployment on the increase?

We owe a reference to the speech of Mr. Colin Campbell of the National Provincial Bank to complete the symposium of annual orations of Chairmen of the "Big Five."

Mr. Campbell pointed out the difficulties with which the bank had to contend during the year under review and which were, naturally enough, identical with those mentioned by other Chairmen. But he could nevertheless show an increase, even if very slight, in the profit figure—doubtless, a very gratifying fact under the circumstances.

His review of the international position is marked by the same doubts about, and distrust of, America's monetary policy as punctuated the speeches of the other bankers with the notable exception of Mr. McKenna. He points to the disparity between the exchange value of the dollar and its proclaimed value and doubts whether greater stability will follow as claimed by the supporters of Mr. Roosevelt's policy. But he adds in all fairness that revolutionary though Mr. Roosevelt's action has been, it must be admitted that the present period in America is sadly out of joint and calls for drastic measures.

Mr. Campbell refers to what has been put forward as one of the reasons of the present world distress, namely, over-production. A happy solution of the problem could be found, according to Mr. Campbell, when Eastern nations like China and Russia come out of a state of perpetual internecine strife and enter the world market as potential consumers of the world's goods.

He turns from the gloomy outlook of international trade to the happier state of affairs at home. He thoroughly endorses the monetary policy of Great Britain and justifies the creation of the Exchange Equalisation Fund for the purpose of keeping the pound steady. In this respect, it differs, in his opinion, from Mr. Roosevelt's fund which is to be used to depress the exchange value of the dollar. Most people give the dog a bad name before hammering it.

Mr. Campbell, like Mr. Beckett, approves a vigorous housing scheme as a stimulant to trade. He mentions, however, the objection that is often raised that schemes of expenditure on public works, paid for out of borrowed money, are "at the expense of heavier debt charges, governmental or local, in the future." Like Mr. Pease of Lloyds Bank, Mr. Campbell also is a champion of State non-interference in industry.

In short, the speech differs but slightly from those which preceded it and is marked by the cautious optimism that pervades all of them.

The Disarmament Debate:

An offspring of Geneva, disarmament discussions have earned the notoriety of being almost as effective as most of the deliberations of the parent institution. The Disarmament Debate in the House of Commons last week, following on the new British memorandum on armaments, goes to strengthen, rather than to remove, the doubts of sceptics who feared that Great Britain was toying with the question and that she did not sincerely propose to disarm. Sir John Simon's lawyerly analysis brings out the crux of the problem:

> "Approaching the whole thing in a spirit of realism, we reach the inevitable deductions from two propositions, neither of which can be effectively challenged. The first proposition is that Germany's claim to equality of rights in the matter of armaments cannot be resisted and ought not to be resisted. Secondly no practical solution can be found on the basis that all nations throughout the world immediately abandon all weapons denied to Germany by the Treaty of Versailles. The conclusion is that in a new convention you will have to face some re-armament by Germany."

The problem has now reached ugly proportions. The thirteen years of grace between the coming into force of the Treaty of Versailles in 1920 and the advent of Hitlerism in Germany in 1933 might well have been utilised in giving effect to a sincere, if slow, policy of disarmament. Other factors have since been introduced into the problem since and the atmosphere made more menacing by untoward international events. Under the circumstances Sir Herbert Samuel's hope that the mission of the Lord Privy Seal to the capitals of Europe would succeed in securing a measure of agreement, would seem too optimistic. In fact, in the course of the debate, Mr. Attlee gave voice to the apprehensions lurking perhaps in every British breast: Is this acquiescence in German parity of armaments at a high level going to lead to fresh competition in armaments, and if so to another war?

Indeed, it was in the nature of an inevitable irony that Mr. Clarry's re-armament motion was down for discussion the very next day. And in the re-armament debate, Mr. Churchill did his best to queer the pitch of those politicians who sincerely hope to bring the disarmament discussions to a successful issue. His first recommendation was to denounce the three-power London Naval Treaty of 1930 and thus start a naval race with the United States as a sovereign means of expediting the settlement of financial affairs with that country, and of lightening our hands for dealing with the menacing political and military situation in Europe. His second exhortation to the House was to launch out, full-steam ahead, on a programme of British re-armament and set public opinion at defiance in the knowledge "that they command overwhelming majorities in both Houses of the Legislature and that nothing will be denied to them that they ask."

If one were asked to diagnose the malady of the body politic in England and give it a name, one could not do better than whisper "Churchill!"

Cunard-White Star Merger:

In November last, the Chamber of Shipping sent an S.O.S. to the Government and demanded protection, in the nature of a subsidy, against unhealthy competition. Government have asked for certain statistics and the hope is prevalent that a subsidy will be announced in the next budget.

In the meantime, the Government have given ample proofs that they are by no means indifferent to the place of England's mercantile marine in the race for supremacy. The State aid for the merger company proposed to be formed out of the Cunard and White Star Companies is on such liberal terms as to cause a heart-burn amongst other industries which have also to face keen international competition.

The terms of the agreement, in brief, are as follows:

> A merger company is to be formed to which the goodwill and assets of the two companies are to be transferred and it is to this joint concern that the greater part of the Government's assistance will be extended. This assistance will take the form, not of a direct subsidy, but of an investment which may amount to as much as £9½ millions if two ships are built. Part of this investment will be in the form of advances that will carry a very low interest rate (½ per cent. below Bank rate) until 1940 and the Government's own borrowing rate thereafter, and part at 3 per cent. rising to 5 per cent. plus a participation in the profits of the merger which will be used to amortise the Government's advances.
>
> The loans will be covered by a first charge on the merger's joint assets, namely, the ship No. 534 (now

Air Mail Week

under contract for construction with John Brown & Co., Ld.) and another giant liner to be built if necessary. But the Government will have no seat on the board and no hand in the responsibility for management.

Such preferential treatment—and no one can deny the liberality of the terms—specially when it involves the expenditure of such a large sum, can only be justified on the ground that the Government are satisfied that the prospects of international travel cannot fail to make the No. 534 a sound commercial venture. And, in fact, there is no reason for questioning the excellence of the investment specially as it has the ostensible object of giving British Mercantile Marine a chance to keep its traditional leadership in the sea always supposing that there will be no untoward international complications to darken the prospects.

Added Duties on French Goods:

The hope that Mr. Runciman may not be compelled to act on the ten days' ultimatum sent to France to restore the full quotas for British goods was shattered by the announcement in the House of Commons imposing fresh *ad valorem* duties on French goods.

The announcement provides that as the quotas have not been fully restored, an order has now been made under Section 12 of the Import Duties Act imposing a duty of 20 per cent., *ad valorem,* over and above the existing customs duties upon certain classes of goods produced or manufactured in France with effect from February 13.

The list of goods includes wearing apparel, boots and shoes and silk goods and the only exception with regard to territory is the Saar Basin.

One cannot but be staggered at the alarming succession of reverses that have descended like a cloudburst on the erst-while peaceful France. First, the ill-fated ministry of M. Daladier trundled out of office by the Stavisky scandal and the rioting that followed. Then the serious economic depression engendered by the adverse balance of trade and the outflow of gold as a result of Mr. Roosevelt's monetary experiment. And now comes the tariff war with England which must gravely worsen the already gloomy outlook. Nor should we neglect the sombre, almost menacing, background of darkening international complications.

In the interest of both France and England and indeed of world-peace, one can only voice the hope that a way of settlement will be found and that the various tariff restrictions will be lifted. M. Doumergue and his newly-found cabinet will do well to consider whether France, in her present state, can hold out against the hostility, political or economic, of any, not to speak of all, of the Great Powers. The situation requires cool-headed and masterly handling. Let us hope that a country that has survived the worst revolutions in the past will eventually rise above the threatening chaos and once more beset on the path of prosperity and progress.

Anglo-Soviet Trade Treaty:

The long-delayed Anglo-Soviet trade treaty is at last in sight. The delay in coming to an agreement, specially noticeable after a similar treaty with France was signed, was causing anxiety and misunderstanding. What with seasonal war alarms in the Far East and the prospect, never far removed, of a shortage of food supply, the Soviet authorities are always thankful to have Russia's place in the economic and political world clearly defined in relation to other Powers. They were troubled, therefore, when Great Britain raised extraneous questions like the compensation in the Lena Gold-fields case before agreeing to sign the trade treaty. And the bogey of a deepening German militarism was always hovering in the background.

An agreement has at last been reached and will come up before Parliament within the next few days. In the meantime, negotiations are proceeding between the Soviet Government and the Lena Goldfields Co., which may result, it is conjectured, in the payment by the Soviet of £2,500,000 to the Company as compensation. The problem of Russian purchases of British herrings and of the food supplies for the British Embassy—the so-called Torgsin question—forms the subject matter of a separate gentlemen's agreement not embodied in the treaty.

On the important question of shipping, there has been, it is understood, a sort of compromise. Great Britain desired Russia to give a written undertaking that 50 per cent. of all goods forming the bulk of Anglo-Soviet trade should be carried in British bottoms. Russia was unwilling on the ground that prices might then be raised against her and an assurance regarding prices could not be given as British Shipping is not under a unified control and certain shippers objected on the ground that subsidised shippers held an advantage in the matter of rates. It is understood that Russia has now agreed to guarantee that 25 per cent. of the goods shall be carried in British ships without any price qualification and that she has further agreed to make up the figure to 50 per cent. provided reasonable prices are charged.

The terms of the trade agreement provide that the visible balance of trade in favour of Russia should be brought down from six to one, to 1½ to 1. This balance shall now be offset and brought to an approximate equilibrium by the invisible imports such as shipping. The balance has been achieved more by reduced British purchases, specially of Russian timber, than by larger Soviet purchases from the British steel, engineering, electrical and railway locomotive industries, as was hoped for.

Unemployment Increase:

The statistics of unemployment show a sharp increase in the unemployment figures for January, 1934. At January 22, the numbers on the register were 1,944,026 wholly unemployed, 355,240 temporarily stopped and 89,802 normally in casual employment making a total of 2,389,068. This was 164,989 more than the number on the register at December 18, 1933. At January 22, there were approximately 9,874,000 insured persons in employment. This was 134,000 less than December, 1933.

A considerable portion of the decline in employment is attributed to the seasonal falling-off in January which some industries always show, *e.g.*, tailoring, printing, book-binding, the hotel, boarding house, road transport, and the building industry. But even in cotton, woollen and worsted and hosiery industries and, to some extent, in steel melting and rolling, metal goods manufacture and the engineering industries, the unemployment figures show a slight increase.

One wonders: Is the brighter outlook for the future which bankers and businessmen have visualised, merely a mirage born of the desire to see the end of the desert of depression and is their optimism, cautious but unmistakable, after all premature and hardly borne out by facts?

UNITED STATES OF AMERICA

Rise in Dollar following Gold Reserve Act: A temporary phase: Gold Rush: Reduction in New York Bank Rate: Stock Market control: Wall Street undisturbed: perhaps an anticipation of delay: Roosevelt might expedite legislation.

Mr. Roosevelt continues to be in the limelight on the world's financial stage; and the expectant, and, one may add, the startled, gaze of all nations

Air Mail Week

is turned towards America. There is something inexorable in the grim resolve of the President to lift the United States out of the financial crisis which had overtaken her, all criticisms of his action notwithstanding and, almost, at all cost. There is also something of the jack-in-the-box about him in the way he has sprung almost breath-taking monetary policies and decisions in the last few months on a bewildered financial world.

The Gold Reserve Act of 1934 has been passed and a greatly attenuated dollar—59.06 cents.—has emerged. The gold stocks of the Federal Reserve Banks have passed into the Treasury and their revaluation has given to the Treasury a profit of $2,805,512,060, out of which the much-talked-of Exchange Fund is to be created.

The more pessimistic of Mr. Roosevelt's critics, shook their heads when the launching of the new monetary policy was followed by a distinct rise of the dollar against sterling. They even perhaps quoted Burns with some relish : "The schemes of men and mice gang oft astray" !

But changes in fiscal policy naturally take time to adjust themselves. To borrow Sir Josiah Stamp's simile, during a spell of cold it is possible to take the thermometer to a warm corner where it will show a distinct rise. That does not take away the cold spell. And the rise of the dollar in London does not necessarily prove that the object of Mr. Roosevelt's new policy will not be achieved. The inevitable delay in shipping gold to the United States at a speed and in quantities sufficient to counteract other factors like heavy European purchases on Wall Street, the rush to cover bear positions in American currency, the repatriation of American capital, is an element over which unfortunately the all-powerful President has no control. But signs are not lacking that already the dollar is on the downward grade and one can reasonably hope that the stabilisation of an attenuated dollar and a general rise in prices are rewards the bold policy of the President will eventually earn.

The Gold Rush

In the meantime the "gold rush" to America continues. The prow of every bullion-carrying ship is pointing towards New York harbour ; and the only check to the flow is the limited space in ships' holds. This last is a factor which is likely to prolong the gold rush unless other untoward international developments check the flow. For arbitrageurs are not willing to deal in sufficient quantities when shipping accommodation is at such a premium. And although the London gold price is slowly moving towards its new parity, it is still well below the export point, so that the movement may continue over a long period.

Washington is said to be concerned at the stampede and the reduction of the re-discount rate from 2 to 1½ per cent. is officially stated to be an effort towards making the American market less attractive to foreign capital. France also, as hinted in *Indian Finance* last week, is taking steps to stop the outflow of gold.

But the trend of the markets in both London and New York go to prove that Mr. Roosevelt's anticipations have been correct. Industrials have been fairly steady in London and definitely firm in Wall Street. Gold shares have moved up. A falling gold price and a rise in the shares form a phenomenon which have made even the sceptics wonder whether Mr. Roosevelt has pulled off the greatest monetary experiment of recent times. Whether developments in France in the next few weeks will disturb the smooth working of the experiment remains to be seen.

Government Control of Wall Street

Legislation of a drastic nature is afoot granting the Federal Trade Commission extensive, almost arbitrary, powers of control over stock exchanges. Senator Fletcher's bill before the Senate provides, among other things, that margin requirements should be fixed at a minimum of 60 per cent. of the value of securities traded, that "pools" should be prohibited altogether, that there should be further restrictons on lending of stock and thus on short selling and that the banks should be prohibited from accepting certain classes of security as collateral. The penalty for violation is fixed at a maximum imprisonment for 10 years and a fine which may amount to $25,000. Stock exchanges themselves are liable to fines aggregating $500,000.

Drake is said to have continued a game of bowls while the Spanish Armada hove into sight. Only the men on the spot know what game is in progress at Wall Street but the nonchalance of Wall Street firms in the face of the impending legislation is, nevertheless, spectacular and inexplicable. Perhaps, they have wrapped themselves with the serene complacency that Federal legislation is a slow-moving machine. Perhaps they imagine that the measures sponsored will not actually have a very violent effect on the markets. Or more probably still they are banking on the non-committal nature of the message of the President on the subject and are hoping that the bill would merely result in giving general regulative powers to the Federal Trade Commission.

But Wall Street should remember that legislation going through Congress with unwholesome rapidity is by no means an unfamiliar spectacle to-day; and with the authority he enjoys at present and with the support he is sure to command from the country at large for any legislation, however violent, directed against Wall Street, it should take Mr. Roosevelt a perilously short time to enact the bill into law. Whether the effect of such law will be drastic or revolutionary is open to argument. But it is bound to have some effect and to create not a little embarrassment. If it results only in making the market rigid and inelastic quite a lot of harm will have been done. While, therefore, one would welcome legislation for the restriction of unhealthy gambling on the exchanges, one still hopes that Mr. Roosevelt would not countenance any interference with the stock exchange of the destructive kind favoured by Mr.

ADVERTISEMENTS IN CARRIAGES

ON

The Madras Suburban Electric Trains.

A limited number of advertisements will be accepted for display on the panels inside the coaches at specially reduced rates shown below :—

11" × 11" ... Rs. 6 pe annum for each.

Air Mail Week

Peccora or Mr. Fletcher. But Mr. Roosevelt falls outside the pale of ordinary speculation.

Iron and Steel

Steel ingot production according to the *Iron Age* for the week commencing February 5, was at 38 per cent. of capacity as compared with 35 per cent. the previous week. The increased demand from the automobile and railroad industries has given the steel trade a buoyancy which it has not possessed since last summer.

The production of steel ingots during January, as reported by the American Iron and Steel Institute, was 1,977,000 tons as compared with 1,820,000 during December and 1,006,000 tons in January, 1933.

The production of pig-iron in the United States during January was 1,215,000 tons as compared with 1,177,000 during December and 569,000 tons in January, 1933. The number of active furnaces was 87 against 75 in December and 38 in January, 1933, the daily capacity of the furnaces being 39,000 tons against 38,000 in December and 19,000 in January, 1933.

The production of zinc in America during January, 1934 was 33,000 tons against 32,000 tons during December and 19,900 tons during January, 1933.

Company Earnings

In a comparative statement prepared by the National City Bank of New York, embodying nearly 350 industrial companies engaged in various lines of trade a marked improvement is apparent in earnings for 1933 over those for 1932.

The companies having an aggregate net worth of $6,534,000,000 show combined net profits, less deficits of nearly $163,000,000 in 1933 as compared with a deficit of $41,000,000 in 1932—a return of nearly 2.5 per cent. on the outlay. The proportion of individual companies working at a profit rose from 43 per cent. of the total in 1932 to 62 per cent. in 1933.

FRANCE

MORE CABINET CRISIS

The crisis in France has not yet ended and the country is not in sight of even the dawn of a settled government. While commenting on the formation of the new ministry last week, a certain amount of diffidence was expressed as to the success of the coalition from the point of view of carrying on the administration of the country. The peculiar system of the organisation of the party groups in the French Chamber and the inevitable tendency for the government to satisfy the whims and fancies of these groups to secure a majority for itself in the Legislature were also pointed out, as the chief defects in the political life of the country. The developments during the week only strengthen these fears and it looks as though the entire nation has become wearied of the working of democratic institutions. Placed as she is on the borders of two dictatorships, it is very difficult for France not to be influenced by the ideas and ideals of these autocrats, and it is not surprising, therefore, that there has been, of late, a growing tendency for the rise of a dictator in France. But the would-be dictator of France will not be of the type of Mussolini or Hitler as French sentiment is strongly biassed against either of them. Further, the idea of equality has so deeply been rooted in the minds of the nation that it is inconceivable that a privileged class should be allowed this unique power; individualism has also a strong hold on the nation, but considering the needs of the hour, it may be willing to sacrifice a part of its individualistic notions in favour of a stable government. Viewed from this angle, a dictatorship of the Jacobin type appears to find more favour with the nation.

In 1928 M. Poincaire was brought in to save the franc from falling; and, during his term of office, he enjoyed almost dictatorial powers. A strong hand is now also called for to steer the ship of state through troubled waters. The timings of major events in France have been very unfortunate; the Stavisky affair has exploded a very dangerous 'dynamite'; there has been a militant political right wing; a critical stage in the disarmament negotiations has been reached; President Roosevelt's currency experiments have already begun to tell their effects on the French gold reserves. It is interesting to analyse how the situation is being handled by the administrators.

The Daladier Ministry had to face many obstacles even from the beginning; it had to allay the public suspicion and distrust in the government; it had the different sections of opinion to conciliate; it had the quota negotiations to carry on. Already it had made an announcement that the Stavisky affair will be thoroughly investigated and the offenders strictly punished. The culpability of the officials in the scandal had been so widely rumoured that, when investigations proved the guilt, such officials had to be removed, if the public were to be pacified. Accordingly, the hands of justice fell on the Prefect of the Police. M. Chiappe was superceded as the chief of the Police and was offered the post of Resident General of Morocco by the Premier. He refused the offer and his dismissal was the result. In sympathy with the ex-Prefect and in protest of the Premier's action more ministers of the Cabinet resigned, among them being the Finance member. While losing the co-operation of the best available expert on financial affairs, whose services were specially required at the time of balancing the budget for the year which has become very important considering that the Sarraut Ministry had to resign office mainly on this issue, the ministry has not so far succeeded in restoring public calm. Riots in the streets still continue and the Place de la concorde has become the centre of disturbance. M. Daladier has, of course, secured two votes of confidence in the Chamber for his government and made some announcement of policies; but all these were done only in the midst of tumultuous scenes outside the Chamber, due to which the sessions also had to be suspended twice. Public indignation was still at its height and it obtained another victory when the ministry was again overthrown. M. Daladier could have taken a strong hand and quelled the disturbance; but he preferred to quit office.

NOTICE

Printing—Contract for

Tenders are invited for the contract for the supply of Books and Forms and execution of printing work etc., for three years commencing from the 1st April, 1934. For Schedule giving details, apply to the Superintendent of stores, S. I. Railway Co., Ltd., Negapatam, remitting Rs. 10/- per copy which is not refundable nor will the copy be sent by V. P. Post.

2. Tenders are due by the 12th March, 1934.

3. Specimen sheets of the standard Books and Forms may be inspected in the office of the District Traffic Superintendent, Madras.

4. In the case of Standard Books and Forms standardised on white printing paper alternative rates on badami paper should also be quoted in the column provided in the schedule.

Air Mail Week

After being in office for just a week, the Ministry resigned and in a statement explaining his action, M. Daladier says; "The Government is responsible for order, but it refuses to assure order with the aid of exceptional measures which might involve bloody suppression. The Government do not wish to employ soldiers against the demonstrators. I have, therefore, handed to the President the resignation of the Cabinet."

This tantamounts to an admission that the political authorities have not the country behind them. This again brings to the fore the fact that government cannot be carried on by a mere coalition of all parties. The present Chamber was elected in the beginning of 1932 with its normal span of four years, but within the brief period of a year and a half no less than three ministries have risen and fallen. After the fall of each ministry its successor endeavours to form a government with no better results. To be a successful Government, it must come from the Right bloc. It must be strong enough to appeal for a referendum, if necessary, and get the support of the popular vote. In that case a dissolution of the present Chamber may be essential. But the Right wing is not so confident of a success. In Paris, the chief centre of the rioters, the Right wing consists only of communists and the metropolis cannot be taken to represent the entire nation. Even M. Tardieu, who is the central figure in the Right organisation, cannot be confidently expected to stand a poll with success. The Socialists, on the other hand while not being strong in any way to stand an electoral fight, are having a clean record of the scandals; but their internal feuds and inconsistant dallyings with the ministries will prove to be an important factor in their disfavour. The Radico-Socialists, who are neither the one nor the other and who formed an alliance only for electioneering campaign, have had too large a part in the public scandal to secure the confidence of the populace.

In the midst of these uncertainties has happened the resignation of the ministry and the President is again out in the field with the invitation for the would-be Premier. The old veteran, M. Doumergue, who, on the former occasion, refused to accept the honour on the pretext of his advancing age, has now come forward to wield the reins of power. All the various political groups in the Chamber and the Senate except the Socialists voted in favour of a National Government which has now been formed by a small number of leading personalities under the ex-President Doumergue. The methods that the new Government will adopt in dealing with the situation are not yet known; but it is reported that the government may rule without a parliament. It is also stated that one of Doumergue's conditions before accepting the Premiership was the immediate dissolution of the Chamber of Deputies and the holding of new elections—but this may, in all probability, not be before six months.

There is a general confidence in all circles in France that M. Doumergue is essentially a man of the crisis and can be expected to reform the situation caused by a succession of weak governments. It is, of course, too premature to forecast the possibilities of the stability of the new Ministry. Will it bring to the fore that determination and dash that are the essential requirements at this stage? Does M. Doumergue possess the qualities of a miniature dictator peculiarly suited to France at this hour? Will he successfully solve the many problems that are now facing the nation? Time alone can tell and one has to await further developments.

The political tension has been causing some flutter of anxiety in the financial circles. The flow of the French gold to America had begun in the previous week, but it did not assume large proportions only due to the non-availability of fast moving vessels. During the early part of the week, the dollar-franc rate was never below 15.50 as against a theoretical gold export point of 15.07. The demand for francs for gold sales has also resulted in a weakening of the sterling-franc rate in Paris and the violent fluctuations in this rate have proved no less disconcerting to the market than the violent fluctuations to the dollar-sterling rate. Though faced with a sudden rush on its reserves, the Bank of France has not become nervous and the Daladier Ministry, just after its assumption of office, had reiterated its faith in the gold standard.

The movements of the exchanges continued to be in this uncertain state during the whole of this

NOW!

You Can Afford

THIS PORTABLE TYPEWRITER

A FULL-FLEDGED PORTABLE IN EVERYTHING BUT PRICE

The newest member of the Underwood Portable Family. A genuine writing machine at the lowest price ever listed for a complete typewriter! Features available only in portable typewriters costing much more! Air Mail Week

week. At one time the sterling-franc rate rose to 80.50 and the Paris-New York cross rate ruled steadily for an appreciable time at around 16.15. Later still there was something of a recovery but the sterling-franc rate closed no better than 79.75 against an indicated parity of 74.25 and at one time the discount on forward francs was as much as 1.75 for three months. The gold drain as a result of the statutory devaluation of the American currency is certainly assuming threatening proportions but if the heavy offerings of francs last only for a limited period, France is quite capable of withstanding it, in view of the large quantities of gold available in the reserves and the receipts from Holland and Switzerland. Her current balance of payments is, of course, unfavourable but it is small compared with her gold resources.

The point to be considered is whether the hectic sales of francs will be limited to a period. There has been a fair amount of miscellaneous selling and speculative selling too. These two factors cannot continue unabated in vigour for long. The two real tendencies that are more important are: (1) the export of capital by French nationals for their own sake; and (2) the export or withdrawal of funds for investment in the Wall Street boom. While it is not possible to say how much capital has already flown out, the present uncertain political conditions certainly point to a possibility of a substantial amount of capital seeking foreign avenues of investment. Less uncertain is the Wall street boom which still appears to be continuing. It can, therefore, be reasonably expected that the drain of the gold will continue for some time. Coupled with this, if the Stavisky affair reveals a more staggering number of questionable banking operations followed by more runs on banks with increased intensity and strain on the reserves, the flight from the franc is sure to be a concomitant.

In spite of fluctuations in the exchange market, the political crisis has not produced any real flight from the franc. .The French gold standard is safe against anything except bombardment from without. But the raising of the Bank rate from 2½ per cent. to 3 per cent. with effect from February 8, and following on the announcement of the Doumergue Ministry is likely to cause misgivings about the vulnerability of the French standard. While this is only the classic method of protecting the reserve of the central bank, the authorities do not expect the outflow of the metal to cease until the American requirements are satisfied and the dollar falls below the proper import gold point of 15.12 against the parity of 15.07.

GERMANY

STANDSTILL TALKS AGAIN

The Long and Medium-term creditors of Germany have already met in conference in Berlin towards the close of the last month and have, after a good deal of strenuous negotiations, come to an amicable understanding as regards the percentage of cash payment to be made by Germany in the discharge of her foreign debt obligations. Though the Conference is still in progress, conclusions have been reached on more important items of business. Now the turn has come for the short-term creditors. The existing agreement between the short-term foreign crditors and the German debtors is due to expire on the 28th of this month; and to discuss the possibilities of an extension of the agreement for a further period, the Standstill Conference opened in Berlin on the 5th inst. The countries concerned are Great Britain, United States of America, France, Holland, Switzerland, Italy, Belgium, Denmark and Sweden and, unlike in the case of the Long and Medium-term creditors conference, representatives from almost all the countries have arrived in Berlin.

Though full details of the proceedings of the Conference are not available, it is reported that the conference met in friendly atmosphere; and the differences between the two sides do not seem to be important. It is now also considered unlikely that the creditors will ask for a reduction of the credit lines as the German representatives will not probably

BANK OF BARODA,

BOMBAY TELEPHONE CO., LD.

NOTICE

NOTICE is hereby given that the Twelfth Ordinary General Meeting of the Bombay Telephone Company, Limited, will be held at the Registered Office of the Company, Telephone Buildings, Home Street, Fort, Bombay, on Friday the 23rd day of March, 1934 at 5 o'clock (S. T.) in the afternoon for the purpose of transacting the following business, namely:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended the 31st December, 1933.
2. To declare a dividend.
3. To elect Directors in the place of those retiring by rotation.
4. To appoint auditors for the ensuing year and fix their remuneration.
5. To transact any other ordinary business of the Company.

The Transfer Books and Register of Members of the Company will be closed from the 23rd March to the 29th March, 1934, both days inclusive.

Dated this 19th day of February, 1934.

By order of the Board of Directors,
R. H. PARKER,
Secretary.

The Directors' Report and the Audited Accounts will be posted to shareholders in the near future.

Air Mail Week

agree. On the other hand, if the Germans seek a further reduction of the interest payments, this will no doubt be rejected by the representatives of the creditors. Among other things, the Conference will endeavour to find out a compromise on the question of payments due from the Golddiskontbank before February next year. These amount to a total of over Rm. 200,000,000.

Latest reports till the time of writing also confirm that the negotiations are progressing smoothly. So far, it appears, that the discussions have been confined to the amendments of the existing agreements. The American representative is reported to have submitted a lengthy memorandum embodying their recommendations. But these are comparatively minor items considering the major successes that have been achieved. An agreement has been signed by the German and Swiss governments prolonging the Transfer Agreement between the two countries till June 30. Swiss creditors will be paid in full, in return for additional German exports to Switzerland. Another agreement with Holland similar to the one with Switzerland has also been announced about the same time.

Much of the importance of these debt discussions that are now going on in Berlin can be gauged from the actual amount of payments involved. The export and import of gold from and into Germany is a good pointer in this direction.

		1932	1933	1929-1933
Exports total	...	432.6	797.3	4,109.9
France	...	161.6	399.1	2,012.1
Holland	...	194.4	227.0	744.5
England	...	3.7	156.5	378.9
Switzerland	...	36.9	2.6	313.9
Imports total	...	300.8	357.9	1,957.0
Russia	...	194.2	168.2	609.9
France	...	1.0	114.7	230.9
Holland	...	81.4	50.5	137.0

The gold imports during the year 1933 increased as compared with 1932 by Rm. 57,100,000 to Rm. 357,900,000 whereas the gold exports jumped by Rm. 364 millions to 797.3 millions. There has thus been a gold export surplus of Rm. 439.4 millions in 1933 which shows an increase of over Rm. 300 millions over the figures for the previous year. Much of this export surplus has been sent to France. After deducting the gold that has been re-imported by Germany, about Rm. 1,750 millions in gold have been sent to France during the last five years.

POUND, FRANC AND DOLLAR

A SYMPOSIUM ON SLIMMING

By. G. D. H. COLE

Mr. Pound: Good morning, Mr. Dollar. I hope you are feeling well.

Mr. Dollar: Not too bad, Mr. Pound. The fact is I have been trying to get my weight down. The doctors have been giving me some pretty curious medicine. I am a lot lighter than I was, though not quite so light as I hope to be. My doctor says he may have to get my weight down to half what it used to be, before I shall be thoroughly cured. But it may not come to that. He may be satisfied as long as he can get at least 40 per cent. off.

Mr. Pound: Even that's a lot to lose, Mr. Dollar. I had a course of rather the same treatment two or three years ago myself. I was having very bad indigestion before that, until the doctors finally agreed to reduce my weight. But I've been a great deal better since, and I only wish they had done it sooner than they did. I used to be much too fat before 1931.

Mr. Dollar: The world used to be full of fat people; but now-a-days the doctors seem to agree there's nothing like being thin.

Fat or Muscle?

Mr. Pound: Not all of them, Mr. Dollar. That M. Franc, who lives next door to me, says he will not go in for this slimming treatment on any account. His doctor doesn't hold with it either.

Mr. Dollar: He does look fat, doesn't he? But there's no compulsion on him to get much thinner unless he wants to. I expect he eats too much.

Mr. Pound: In fact, I don't think he eats so much as you and I do. He says he isn't really fat at all, only burley and big-built, so that people mistake for fat what is in truth bone and muscle.

Mr. Dollar: Well, as long as he feels in good health, that's the main thing. No need to get in the doctor's hands unless you're ill.

M. Franc: Were you talking about me? I wish I did feel well. I do not feel well at all. But it is not this slimming that will make me well.

Mr. Pound: I tell you, it did a lot of good to me; and Mr. Dollar says it is doing him good, too. But perhaps you've got a different kind of constitution.

M. Franc: What is wrong with me, my friends, is that I am being ruined. It is the worry that is driving me out of my health. Ever since you two gentlemen took to slimming, and so many more like you, my little shop has been deserted. No one comes any longer to buy my goods; for are they not all starving themselves as these so absurd doctors command? But if I cannot sell, where shall I get the money to buy, and keep myself well-nourished as a gentlemen should be? I am driven to distraction, my friends. I have been compelled to command my good wife to order less of everything.

Mr. Dollar: I guess we've all had to do that in these days. But what about your next-door neighbour, Herr Mark? He is like you, and believes in keeping stout.

M. Franc: But no, I assure you. In his case it is all a pretence. He pads himself out to look as if he were fat and prosperous; but he is in truth a mere skeleton. He buys nothing. He does not even pay his debts, though I am assured he could afford to pay more than he pretends.

Mr. Pound: I agree with you there, M. Franc. Herr Mark ought to pay up—especially as I hear he is paying off what he owes Mynheer van Gulden.

Mr. Dollar: Stop a minute, you two. If you are talking about people who do not pay their debts, what about me? You both owe me a tidy packet of money, you'll admit.

The Good Old Days

M. Franc: That is quite another matter, Mr. Dollar. It is an old story. I would without doubt pay you if I could; but my wife—she will not permit. She tells me she cannot spare anything more from the housekeeping money.

Mr. Pound: As for me, Mr. Dollar, you'll agree I do try to keep on the right-side by paying you something, even if it isn't much. And I think that entitles me to a little consideration. If you go on slimming at this rate, I shall have to start slimming again, too, though I think I'm thin enough already. I'm like M. Franc. I can't afford to buy things to eat, unless other people come and buy things in my shop.

M. Franc: Ah, no, Mr. Pound. You are much too thin already. You must on no account let yourself get any thinner, or where shall I be?

Mr. Pound: Changing your doctor, I shouldn't wonder, M. Franc.

M. Franc: These doctors! Do you remember, my friends, how beautifully we used to manage when, though we had a doctor, we none of us ever consulted him, but all just ate what came to us, without giving the matter a thought?

Mr. Dollar: I reckon you were both younger then.

Mr. Pound: But you're the youngest of us all, Mr. Dollar.

Mr. Dollar: But just you think of the rate I've lived at—and mean to live at again, when I once get over this batch of trouble. No more doctors for me then.

M. Franc: It is not wise to go the pace. Myself, I believe in the prudent and quiet life.

Doctors and Quacks

Mr. Pound: Prudent, I agree. But I like a bit of a bust every now and then.

Mr. Dollar: Gee! So do I. It ain't natural, holding yourself in, and feeling an aching void just where you want a nice full sensation.

Mr. Pound: I wonder if we shouldn't all be better advised if we went back to the old doctor some day, instead of consulting these young fellows, who think they know so much. Your still have Doctor Or, don't you, M. Franc?

M. Franc: Dr. Etalon Or. yes. I recommend you strongly to return to him. I left him once, and went to the same quack who ruined Herr Mark's constitution. Never again!

Mr. Dollar: I don't agree with you. I've had plenty of Dr. Or, and I mean to have no more unless he changes his prescription. But there's something to be said for that young son-in-law of his, Dr. Stable Price.

Mr. Pound: If you ask me, that man's a crank. I rather think I shall do without a doctor at all, and wait to see how you two get on.

Mr. Dollar: I tell you, I'm feeling a lot better already. You'd much better call in one of my men.

Mr. Pound: You seem to have so many doctors.

M. Franc: You will all have to come back to Dr. Or, in the end.

Mr. Dollar: Maybe, when I'm feeling well again.

Mr. Pound: Just possibly, when he has forgotten some of his old ways. But never on the old terms.

STATISTICAL INFORMATION

THE INDIAN REVENUES.

The Indian Revenues for the ten months of April, 1933, to January, 1934, contrast thus with the corresponding period of two previous years (000's omitted):—

	1931-32 Rs.	1932-33 Rs.	1933-34 Rs.
Land Revenues ...	23,18,78	22,33,41	23,07,79
Salt " ...	5,99,78	8,83,40	6,91,74
Stamps " ...	9,38,20	9,86,37	9,69,73
Excise " ...	11,20,25	11,05,52	11,43,67
Customs Receipts ...	37,14,74	43,12,72	39,89,58
Income-taxes (including Supertaxes and Excess Profits Duty) ...	11,88,11	12,33,64	11,38,92
Forest Revenues ...	2,61,17	2,31,77	2,16,94
Opium	1,57,57	80,30	1,26,42

EARNINGS OF THE RAILWAYS

The total approximate gross earnings of all State-owned Railways for the week ending 3rd February, 1934 (44th week) ,amount to Rs. 187 lakhs, Rs. 4 lakhs MORE than the figures for the last week and Rs. 7 lakhs MORE than the figures for the corresponding week of the previous year and Rs. 8 lakhs MORE than the corresponding week of 1931-32.

The following are the up to date approximate gross earnings of the State-owned Railways from 1st April, 1933, as compared with the actuals of the corresponding period of last year:—

Railways.	Up to 3-2-33 (in lakhs) Rs.	Up to 3-2-34 (in lakhs). Rs.
A. B.	132	130
B. N.	573	619
B. B. & C. I.	839	865
Burma	268	282
E. B.	410	424
E. I.	1,434	1,445
G. I. P.	975	986
M. & S. M.	551	567
N. W.	1,154	1,173
S. I.	445	436
Tirhoot & Lucknow-Bareilly ...	147	152
Other Railways	27	32
Total ...	6,955	7,111

A comparison with the figures of the previous week for the principal State-owned Railways shows INCREASES in the approximate gross earnings of all Railways except the A. B., E. B. and G. I. P. A comparison with the figures of the corresponding week of 1933 shows INCREASES in the approximate gross earnings of all the principal State-owned Railways except the E. B., G. I. P., M. & S. M., S. I. and Tirhoot and Lucknow-Bareilly.

Comparisons of figures of wagon loadings on Class 1 Railways for the week ending 3rd February, 1934, and for the cumulative period from 1st April, 1933, to 3rd February, 1934, with the corresponding periods of the previous year are as follows:—

During the week ending 3rd February, 1934, there were loaded on the broad gauge 90,169 wagons, being 11,723 MORE than in the corresponding week of the previous year, or an increase of 14.9 per cent. On the metre gauge there were loaded 54,077 wagons, being 22 MORE than in the corresponding week of the previous year, or an increase of 0.04 per cent.

For the period from 1st April, 1933, to 3rd February, 1934, there were loaded on the broad gauge 3,252,788 wagons, being 220,461 MORE than in the corresponding period of the previous year, or an increase of 7.27 per cent., and on the metre gauge 2,060,056 wagons, being 178,157 MORE than in the corresponding period of the previous year, or an increase of 9.47 per cent.

BOMBAY WORKERS' COST OF LIVING

In January 1934 the working class cost of living index number for Bombay city, with July 1914 prices equal to 100, was 96, being two points lower than that for the preceding month. The index number for food articles fell by 2 points to 86.

During 1933, the average level of retail prices for all the commodities included in the working class cost of living index number compiled by the Labour Office was approximately 3 per cent. above the level of July 1914 as compared with 9 per cent. in 19322 and 49 per cent. in 1929, according to the annual review of the working class cost of living in Bombay City published in the current issue of the "Labour Gazette.

The annual index number for cereals declined by five points to 67. The annual index number for pulses declined by seven points to 95. The weighted index number for all food grains stood at 70 as against 75 in the previous year.

Under the "other food" group, all the articles except salt and beef which rose by 10 and 7 points respectively, recorded a fall. The annual average index number for other food articles declined by 11 points to 135. The index number for all food articles averaged 94, being 8 points lower than in the previous year.

The index number for the fuel and lighting group remained stationary at 136 throughout the year.

The annual index number for the clothing group stood at 113 in 1933 as against 119 in 1932.

In December 1933 the working class cost of living index number for Ahmedabad, with the average prices for the year ended July 1927 equal to 100, was 71, being two points lower than in the preceding month. The index number for food articles fell by two points to 61.

In December 1933 the working class cost of living index number for Sholapur with the average prices for the year ended January 1928 equal to 100, was 68, the same as in the preceding month. The index number for food articles remained stationary at 57.

In December 1933 the Bombay wholesale prices index number, with July 1914 prices equal to 100, was 95 as against 96 in the preceding month.

THE EAST INDIAN COAL CO., LTD.

Extract from Directors' report:

Report for the half-year ended 31st October 1933, shows a profit of £3,047-10s.-1d. after making allowance for Depreciation. The sum of £17,730-0s.-5d. brought forward is to be added to the above profit, and there is, therefore, an amount of £20,777-10s.-6d. for disposal.

The Directors recommend that this sum be dealt with as follows:—

	£	s.	d.
In payment of a dividend for the half year at the rate of 10 per cent per annum, less Income Tax	£ 6,000	0	0
Carry forward to next half-year ...	£14,777	10	6
	£20,777	10	6

The output during the six months to 31st October, 1933, was 177,564 tons which compares with 219,387 tons raised in the corresponding period in the previous year—a decrease of 41,823 tons.

Work at the Collieries is proceeding satisfactorily. Prices are still at an uneconomic level and market conditions have necessitated the voluntary restriction in raising being continued throughout the half-year.

Thomas H. C. Troubridge, P. W. Newson—Directors. A. P. Bray—Secretary. Jardine Skinner & Co.,—Managing Agents in Calcutta.

Comparative statement of the Balance sheets for the last three consecutive half-years.

THE UNITED FLOUR MILLS CO., LTD.

Extract from the Managing Agents report:

Report for the half-year ended 30th November, 1933, shows a loss on Revenue Account of Rs. 14,395-6-2 and after transferring Rs. 15,000 from 'Reserve Fund' there is a balance at credit of Profit and Loss Account of Rs. 465-9-1 which is recommended to be carried forward.

The Flour Milling Industry has experienced throughout the past year a hard struggle for existence.

The Government of India propose to renew the Wheat Import (Duty) Act for a further period of twelve months in the interest of National Policy, but it is difficult to recall legislation that has placed any industry under so heavy a handicap as the Wheat Import Duty imposes on the Milling Industry at the Ports.

Owing to the heavy increase in imports of Flour and Atta from Karachi into Calcutta, which shows no signs of abating—prospects for the ensuing half-year are uncertain.

Shaw Wallace & Co.,—Managing Agents. P. Crawford, R. A. Towler, N. N. Sircar—Directors.

This balance, the directors recommend, should be disposed of as follows:—

1. In Payment of a final dividend on the preference Shares of of 4 % making 8% for the year (free of Income-Tax)	Rs. 40,000 0 0
2. In payment of a final Dividend on the ordinary shares of Rs. 2 per share making Rs. 3 per share for the year (free of Income-Tax) ...	,. 3,00,000 0 0
Carry forward ...	,, 2,02,312 1 8

The improvement in world sugar prices which seemed likely to take place when the last report was issued has not materialised, so far as Eastern Markets are concerned. In spite of drastic curtailment of production on the part of Java, the enormous stock of unsold sugar in the Island, estimated at some 2¾ million tons, continues have a depressing influence on the Indian Market, which is also affected by the severe competition which is proceeding amongst domestic producers.

Record quantities of raw material were, however, treated last season at all the Company's units, and this has compensated for the fall in prices. Plentiful supplies of can are again in sight for the current season.

The Directors are pleased to report that the Company's properties fortunately escaped any serious damage from the recent earthquake. At the Marhowrah Factory some walls and roofs partly collapsed and operations had to be suspended for two weeks.

The Gauri Factory and the Cawnpore Refinery were not damaged and there was no stoppage of operations.

It will be observed that a larger amount has been carried forward on this occasion; the Directors consider this advisable under present circumstances.

T. Smith, J. M. Lownie, Ram Narain—Directors. Begg, Sutherland & Co., Ltd.—Managing Agents.

		Cash & Deposits ...	1,446
Total ...	5,45,186	Total ...	5,45,186

Extracts from Directors' Report:

The working of the half-year, shows a loss of Rs. 10,462-5-6. It has been decided to transfer to the credit of Profit and Loss Account the sum of Rs. 20,000 from Reserve Account and, after including this amount, the Profit and Loss Account shows a credit balance of Rs. 9,537-10-6, adding the amount brought forward from the last half-year Rs. 3,301-14-9, there is a total of Rs. 12,839-9-3, from this Depreciation has to be deducted Rs. 10,000, leaving a balance of Rs. 2,839-9-3, which is to be carried forward.

The Directors are unable to report any improvement in the demand for coal, so raisings have remained restricted. Stocks, however, have been reduced. Anderson, Wright & Co., Managing Agents.

Total	41,28,167	Total	41,28,167

Extracts from Directors' Report :

Report.—For the year ended 31st December, 1933.

Traffic.—The following table gives a comparison of traffic statistics for the past three years:—

	1931.	1932.	1933.*
Number of Passengers	13,08,684	13,80,827	14,51,519
Gross Earnings (in Rupees)	5,28,091	5,51,136	5,41,601
Merchandise (in Tons)	136,958	169,329	158,562
Gross Earnings (in Rupees)	2,96,414	3,93,872	3,90,911

*The figures for 1933 will require adjustment as the Audited Returns for November and December have not been received.

Coaching Traffic.—The number of passengers carried during the year under review shows an increase whilst the receipts therefrom have declined. This is due to the introduction of season tickets and a shuttle service between Ahmedabad and Nandol Dehgam as from 1st February, 1933, in addition to the existing concession of III Class week-end return tickets at 1½ fares, with a view to meeting road motor competition.

Goods Traffic.—The figures of this class of traffic show a decline which, however, is so slight as not to call for any special comment.

Road Rail Conference.—The Conference, mention regarding which was made in the Directors' Report last year, was held in Simla in April last for the purpose of considering the Report of the Committee appointed by the Government of India to go into the question of Rail and Road co-ordinaion in all parts of India. Mr. E. C. Reid, a Director of this Company, attended the Conference as the Representative of all the Branch Line and Light Railways in India. The Resolutions passed at the Conference are receiving the consideration of the Government of India.

From the Accounts it will be seen that the working of the line for the year shows a net profit of Rs. 2,01,603-10-1, to which must be added the sum of Rs. 48,633-2-9 brought forward from last year's Accounts, making Rs. 2,50,236-12-10 in all.

The Directors declared an ad-interim Dividend at the rate of 8 per cent. per annum, less Income-tax, which absorbed Rs. 1,00,000, leaving a balance of Rs. 1,50,236-12-10 available for disposal, which they propose to apply as follows:—Dividend for the second half-year ended 31st December, 1933, at the rate of 12 per cent. per annum (making 10 per cent. for the year) payable less Income-tax Rs. 1,50,000, balance to be carried forward Rs. 236-12-10, total Rs. 1,50,236-12-10.

It will be seen that an additional amount has been debited this year on account of Income-tax and Super-tax: This is due to the Directors considering it prudent to provide for Income-tax and Super-tax payable on the profits of the year under review.—F. F. Stileman, Sir Purshotamdas Thakurdas, Ambalal Sarabhai, E. C. Reid, Sir Kikabhai Premchand, Directors.

AMRITSAR-PATTI RAILWAY CO., LD.

Synopsis of Balance Sheet:

LIABILITIES.	£	ASSETS.	£
Capital	33,00,000	Block	32,04,944
Debentures	3,00,000	Preliminary Exps.	2,21,554
Reserve	40,000	General Charges,	
Other Debts	37,976	etc.	2,05,269
Profit & Loss	1,19,712	Outstandings	1,60,544
		Cash	4,837
Total	37,97,148	Total	37,97,148

Extracts from Directors' Report:

Report for the year ended 31st December, 1933.

Traffic.—The following table gives a comparison of the traffic figures for the past three years:—

	1931	1932	1933
Number of Passengers	13,99,000	13,59,232	14,35,604
Gross Earnings (in Rupees)	5,45,600	5,28,370	4,89,594
Merchandise (in Tons)	47,253	45,834	63,890
Gross Earnings (in Rupees)	82,822	83,604	1,10,206

*The figures for 1933 will require adjustment as the Audited figures for the last two months of the year have not yet been received.

During the year under review III Class fares between Amritsar-Bhagtanwala-Tarn-Taran Stations were further reduced in order to meet road motor competition. As will be seen from the coaching figures, this action has resulted in an improvement in the number of passengers carried but a corresponding decline in the earnings derived therefrom.

It will be noted as regards Goods Traffic that the figures of tonnage carried and the receipts therefrom both show a welcome increase.

The Road Rail Conference, mention regarding which was made in the Directors' Report last year, was held in Simla in April last for the purpose of considering the Report of the Committee appointed by the Government of India to go into the question of Rail and Road co-ordination in all parts of India. The Chairman of this Company attended the Conference as the Representative of all the Branch Line and Light Railways in India. The Resolutions passed at the Conference are receiving the consideration of the Government of India.

From the Accounts it will be seen that the working of the line for the year, after providing for Government's Share of Surplus Profits, shows a net profit of Rs. 1,82,582-12-5, to which must be added the sum of Rs. 27,338-14-7 brought forward from last year's Accounts, making Rs. 2,09,921-11 in all.

The Directors declared an ad-interim dividend at the rate of 5½ per cent. per annum, less Income-tax, which absorbed Rs. 90,750, leaving a balance of Rs. 1,19,171-11 available for disposal, which they propose to apply as follows:—Dividend for the half-year ended 31st December, 1933, at the rate of 7 per cent. per annum (making 6¼ per cent. for the year) payable less Income-tax Rs. 1,15,500, balance to be carried forward Rs. 3,671-11, total Rs. 1,19,171-11.

It will be seen that an additional amount has been debited this year on account of Income-tax and Super-tax. This is due to the Directors considering it prudent to set aside Rs. 20,000 being partial provision for the 1934-35 assessment.—E. C. Reid, Sir Purshotamdas Thakurdas, Ambalal Sarabhai, Sir Kikabhai Premchand, F. F. Stileman, Directors

COOLIEKOOSIE TEA CO., LD.

		Cash ...	2,828
Total ...	2,61,553	Total ...	2,61,553

Extracts from Directors' Report:

Report for the year ended 31st December, 1933.

Accounts.—It has been considered advisable to set out the financial position in a somewhat different manner than formerly in the Balance Sheet.

Hitherto depreciation has been deducted from the Block Assets but, in the Balance Sheet now submitted, such depreciation has instead been placed to credit of a Development Fund.

In the Balance Sheet at 31st December, 1932, the amount Rs. 37,299-9-11 appeared as Working Capital, but in the Balance Sheet now submitted same has been shown under Development Fund.

It will be seen from the Balance Sheet that the Share Capital and the Development Fund together amount to Rs. 2,23,558-3-6, and that the Block Assets amount to Rs. 2,43,926-10-10, so that a further sum of Rs. 20,368-7-4 requires to be added to the Development Fund. It is therefore recommended that Rs. 20,368-7-4 be added to the Development Fund out of season 1933 profits.

The results of working for season 1933 and the Directors' recommendations are as follows:—Profit as per Profit and Loss Account Rs. 24,272-8-10, to be added to Development Fund Rs. 20,368-7-4, leaving a balance to be carried forward to season 1934 to Rs. 3,904-1-6.

The results for season 1933 must be considered satisfactory, when it is remembered that a net loss of Rs. 19,875-15-4 was incurred in season 1931 and a net loss of Rs. 9,455-13-9 was incurred in season 1932.

Tea Crop.—The Company agreed to the Tea Crop Restriction Scheme for season 1933, and manufactured its full quota for export and for internal consumption in India.

A comparison of the Tea Crop and gross average Tea Sale Prices for the past 5 years is given hereunder:—

Season	Crop.	Sale Price As.	Sale Price P.
1929	2,826 maunds.	8	11
1930	2,430 „	8	4
1931	2,858 „	5	4
1932	2,536 „	4	8
1933	2,167 „	8	10

Buildings and Machinery.—No. expenditure on new buildings, nor on new machinery, was incurred during the year.

Area.—The total area remains the same as last reported, viz:—1,470 acres, of which 457 acres are under tea.

Estimates for Season 1934.—For the current year a restricted crop of 2,200 maunds has been provided for at a cost of Rs. 69,800.—N. E. Ward, D. Cumming J. C. D. Naismith, J. Elcock, Directors.

THE LLOYDS BANK, LD.

Report, The Directors present the Balance Sheet as at the 31st December lasi.

After payment of salaries, pensions, staff bonuses and allowances, other charges and expenses, and the annual contributions to the Provident and Insurance and Widows and Orphans Funds, and after charging Rebate and Income-tax, provision having been made for all Bad and Doubtful Debts and for Contingencies out of the profits of the year, the profit available for distribution is £1,438,822-4-5. To this has to be added £514,746-6-10 brought forward from the previous year, making a total of £1,953,568-11-3, out of which the following appropriations, amounting to £773,732-6-5, have been made:—Interim Dividend on the "A" Shares for the half-year ended 30th June last of 1s. 2 2/5d. per Share, being at the rate of 12 per cent. per annum, less Income-tax, paid 29th July, 1933, £646,783-0-5. Interim Dividend on the "B" Shares for the half-year ended 30th June last of 6d. per Share, being at the rate of 5 per cent. per annum, less Income-tax, paid 29th July, 1933, £26,949-6, transfer to Contingencies Account £100,000, total £773,732-6-5.

This leaves a balances of £1,179,836-4-10, which the Directors recommend be appropriated as follows:—Dividend on the "A" Shares for the half-year ended 31st December last of 1s. 2 2/5d. per Share, being at the rate of 12 per cent. per annum, less Income-tax, payable 3rd February, 1934, £646,783-0-5, Dividend on the "B" Shares for the half-year ended 31st December last of 6d. per Share, being at the rate of 5 per cent. per annum, less Income-tax, payable 3rd February, 1934, £26,949-6, to be carried forward to the Profit and Loss Account of the current year £506,103-18-5, total £1,953,568-11-3.—J. W. Beaumont Please, Chairman.

WORLD OF INDIAN FINANCE

Calcutta, March 2.

Credits, which have been in demand throughout the week, were in extremely sparse supply at the close, business being done up to 3½ per cent. in Calcutta and 4 per cent. in Bombay. The tightness of money is reflected in the applications received on the Treasury Bills tender day. The total amount offered was Rs. 1.73 crores, which is Rs. 10 lakhs less than last week and nearly Rs. 2 crores less than a fortnight ago. By the same token, the average discount rate of accepted tenders has gone up from Rs. 1-14-5 to Rs. 2-1-4. The tap-rate for intermediate Treasury Bills sold from February 21 to 26 was Rs. 99-9. The realisations from intermediates were only Rs. 9.75 lakhs. With the rise in the average rate of accepted tenders, the tap-rate has also been altered from Rs. 99-9 to Rs. 99-8. Despite the more favourable yield thus available, exchange banks are not likely to be interested firstly because monetary stringency has been a special feature of their position in recent weeks, and secondly because the forward T.T. rates are still too weak to allow remunerative utilisation of London funds in Rupee Treasury Bills. For the time being, it is the local resources that continue to be diverted to short-term Bills. On a close analysis of the balance-sheets of the various Indian banks issued in the last two months, and on a general appreciation of the extent of interest which the Imperial Bank should be taking in Treasury Bills, the opinion advanced in these columns is confirmed that the bulk of the investments in Treasuries is from Indian banks and investment institutions and that foreign money put out in Rupee Bills is negligible.

It may, therefore, be safely said that in the present conditions of trade and money in India, and in the process of gradual and increasing utilisation of Treasuries as an essential instrument of the money market, resources secured from purely domestic sources should easily be able to sustain a floating debt of Rs. 25 crores to Rs. 30 crores. So long as Treasury Bills outstandings are below a maximum of this kind, the Government should be able to secure their short-term requirements at a rate not very much higher than that which the British Treasury pays, from time to time, for its short accommodation. One can go further and say that if, due to any special causes, the total of the floating debt falls below Rs. 20 crores, the conditions thereby induced in the money market might be such as to enable the Indian Treasury to borrow at a rate only fractionally higher than that paid by the British Treasury. We are, therefore, in perfect agreement with Sir George Schuster when he said, in the course of his Budget statement, that a maximum of Rs. 30 crores is a reasonable amount which, so far from being embarrassing, "is rather a convenience both to us and the market—to us because we are able to borrow in this way at a very much cheaper rate than on funded loans, and to the market because they have now made Government's Treasury Bills a part of their financial machinery." It is also true that the market has come to rely upon this as a convenient method for the investment of short-term money and that a floating stock of about Rs. 30 crores is by no means excessive for its requirements at a time like this.

For a good few years after the inauguration of the Treasury Bills in the second half of the last decade, bankers did not take kindly to this activity of the Treasury. It was because, owing to the great stress and strain which was imposed by a high ratio, Treasury Bills had to be used not for the legitimate purpose of replenishment of the coffers of the Government but, oftentimes, for the control of the credit situation in such a manner as to prop up exchange artificially. The unpopularity of Treasuries was, in a sense, the unpopularity of the eighteenpence ratio. The embarrassments caused by Treasury Bills operations were, likewise, the embarrassments which were inseparably connected with the illfated ratio. Treasury Bills came into their own only when, with the abandonment of the gold standard by Great Britain in September, 1931, the rupee, too, was sundered from its gold moorings. A corresponding depreciation of the rupee in relation to sterling permitted the Government to reverse their earlier monetary policy of continuing and maintaining stringent rates, and, in fact, to launch on a programme of currency expansion. This process of expansion took the form of the short debt owing to the public being replaced, in part, by short-term debt owing to the currency. It was, therefore, possible to reduce the size of Treasury Bills outstandings with the public from a total in the neighbourhood of Rs. 83 crores to Rs. 30 crores or even lower. It was this reduction in the size of the floating debt to manageable proportion, that played an important part in the popularising of Treasury Bills with money market interests. When the Treasury was thus able to put itself in funds by reviving *ad hoc* securities as well as by borrowing government securities from the Imperial Bank and creating currency there against, it had reached a position of such strength that it could dictate the terms on which it was prepared to accept money from the market. The Government could say, curtly and definitely, that they could pay such and such a rate and would not be prepared to go over it on any account. Once a borrower is able to take a strong attitude of this kind towards the lender, the latter finds that the tables are neatly turned on him. This is exactly what happened. There was a sharp and steady lowering in the borrowing rate of short-term money. With supplies of Bills reduced, and with the owner of the Bills in a position to state the terms on which, and on which alone, he would be willing to accept money, the further history of Treasury Bills has been such as to make it a twice-blessed thing, instead of being the twice-cursed thing it was before.

To revert to the current week. The Treasury Bills position, taken in conjunction with the current week's money conditions, is something of a puzzle. In the last few days of February, the market should have received a very substantial sum from Treasury Bills Maturities. Up to February 26, no part of the money so released has found its way into intermediate Treasuries. Nor can the excessive funds be traced to the coffers of banks who have continued to experience marked pressure for credits.

The piquant question arises: What has happened to all this money? Could it have been released after the date covered in the last *communique* of Treasury Bills? No definite explanation for this phenomenon is possible till we know the details of applications for intermediates in the next week. Meantime, a hypothesis can be advanced somewhat as follows: Most of the funds set free from Treasury Bills Maturities towards the finish of February must have been on account of Indian banks or the Imperial Bank. This might have been released too late for re-investment in intermediates before February 26. It may well be that immediately as the banks in question were in receipt of funds from Maturities, they took up fresh Treasury Bills at the tap rate. If this conjecture is right, the next week's *communique* must make a better showing in regard to intermediates than the Rs. 9.25 lakhs disclosed in the current week. As the funds were received by non-exchange banks and reinvested by them, no part of this money has come to the money market proper. It may also be that some part of the funds secured by Indian banks and like institutions from Maturities has been invested in Government securities which have sprung into high favour and which have received a further fillip from the impregnable ways and means position revealed in the budget announced on February 27. The accuracy or otherwise of this hypothesis can only be tested when more definite information is forthcoming in the following week.

Meantime, the bullish view, which we took in regard to giltedge from the intrinsic position of ways and means position revealed in the budget, would appear to be shared by giltedge operators both in Bombay and in Calcutta. There has been a lively and active market, with prices firmer all round. 3½ percent Paper, which was quoted at Rs. 86-6 last week-end, rose to Rs. 87-3 to close at Rs. 87. 4 percent 1960-70 has been a favourite counter and in great request at Rs. 100-14. 3½ percent 1947-50 New Loan has moved further up to Rs. 96-6. Most of the other securities have appreciated by one anna or two annas. London advices have also been favourable. The market at that end has taken a bullish view of Government of India securities on the basis of the budgetary position. With sentiment definitely brighter in India, and with developments quite satisfactory in London, a cheerful outlook is promised for giltedge in the coming months.

Mr. J. M. Lownie, the retiring President of the Upper India Chamber of Commerce, delivered an address marked by a comprehensive treatment of all the important topics, and by an utter freedom from bias in outlook. Mr. Lownie is in the fortunate position of having been the President of a Chamber which has been able to take a poised view on all economic questions. For the blending of European and Indian interests in a healthy proportion and for the ventilation of a point of view which has been harmonious to both, the Upper India Chamber sets an impressive example. Mr. Lownie is succeeded by Mr. Gavin Jones whose views are equally wholesome and who has always shown that he arrives at his conclusions only after much thinking and careful consideration. His pamphlet on the economic issues of India, intended for private circulation, is notable and thought-provoking document. The Upper India Chamber has been uniformly fortunate in the occupants of its Presidential chair.

Mr. Adamjee Dawood, presiding at the annual meeting of the Muslim Chamber of Commerce, gave a terse and informative account of the various aspects of national economy as they were affected in the last year. The most gratifying feature of the speech is that it proved that, Muslim or Hindu, the businessman stands on a common platform, has to deal with common situations, and can join hands in a common demand. Read in conjunction with Mr. Lownie's

BANKS:

It is a mistake to think of a Bank as an institution which exists merely for the purpose of taking care of depositors' money and paying it out on their instructions. Whilst it is true that this is the primary business of a Bank, it forms only a part of the duties which Lloyds Bank is prepared to perform for its customers. It is not possible in a short space to enumerate the many facilities the Bank offers, but its Branch Managers are prepared to consider, or, if they are not themselves in a position to advise, to obtain expert opinion upon any question affecting their customers' finances, investments, income tax, Trusteeships, Executorships, etc.

The devaluation of the Czechoslovakian crown and the circumstance and manner in which it was effected afford after the lapse of a fortnight much food for thought and reflection. In the first place, it has come about at a time when the position of the gold standard in some of its strongest citadels is generally suspected to have become extremely vulnerable and precarious. But reserving this for a fuller discussion at a later stage, the point which strikes us as of supreme importance is that the Czechoslovakian Government have decided, with apparent suddenness, and without any initial beating of the bush or attendant fuss, to reduce the gold value of its currency by 1/6th. And though the passage of the legislation to this effect was preceded by a declaration of the Finance Minister, there has been no appreciable period of uncertainty. Nor was there from the standpoint of the objective position of the currency any reason to believe that it was being subjected to any unbearable strain. From this point of view, the Czechoslovakian devaluation was the most deliberate and the most cold-blooded. Even in the case of South Africa, which is itself a big producer of gold, the actual devaluation which came about at the end of 1932 was preceded by a marked drop in the South African pound, though it must be said it was engendered by the talk of devaluation. Nevertheless, it is untrue to suggest that the Czechoslovakian Government indulged in a capricious act; for though the devaluation might not have been necessitated by the difficulties of the exchange, the national economy clearly requires that some such step should be taken in the national interest. It is true that Czechoslovakia was never obliged to tighten the screw of exchange control, funds being always found for the necessary purposes of trade and finance. But Czechoslovakia has had an enormous shrinkage of her foreign trade which had dwindled to a third of what it was in 1929; and if difficulties of exchange did not present themselves, it was because that, owing to the even shrinkage of exports and imports, no formidable adverse balance ever threatened her. Czechoslovakia has for some time been engaged in schemes of internal economic reconstruction. But an industrial country like Czechoslovakia cannot hope to regain prosperity so long as her exports are seriously cut into by the competition of countries, which have either abandoned the gold standard or had resorted to devices which secure the advantages of devaluation. Czechoslovakia exports her manufactured articles in direct competition with those of Great Britain, the United States, Sweden and Austria all of which have depreciated their currencies and Germany has her blocked mark system. It is no wonder, therefore, that the Government decided to afford an impetus to the export trade by a devaluation of the currency, though the usual signs of the necessity therefor are in this case lacking.

The question arises whether by her recent action Czechoslovakia has started the infection for another epidemic of devaluation. There is, unquestionably, more than one country in Europe under the stress of an inconvenient exchange value for the national currency and anxious to secure relief through devaluation. The gold *bloc*, too, which showed such heroic determination to stand by the historic system of currency during the time of the World Economic Conference and have not perceptibly wavered in their determination in the face of the provocation from America have of late showed signs of weakening in their resolve. It would appear from the accounts of the Air Mail papers that among the gold standard countries more concern is felt about the effects of the Czechoslovakian devaluation on their own trade and industry than about its significance to their currency systems. It has been suggested that the appropriate answer to it would be to levy on imports from Czechoslovakia a duty equivalent to the devaluation and afford to exporters to Czechoslovakia a bounty according on the same standard. As for the gold standard, it is held on the Continent that the Czechoslovak decision is not likely to affect the attitude of France. On the other hand, some anxiety is felt about the prospects of the Swiss franc and the guilder which are considered to be more vulnerable than the French franc.

Examining it from the standpoint of international economy as a whole, there is little or no reason to feel nervous about the step taken by the Czechoslovakian Government. On the other hand, there is reason to feel gratified that something has been done to reduce the suspense engendered by the long-drawn tussle between the Anglo-Saxon policy and the policy of the gold *bloc*. If the Governments are to take adequate action in regard to the raising of prices and avoid a multiplication of excessive trade restrictions, devaluation of the currency is the only way out.

For various reasons, the question of the trend of interest rates in the future has again come to the fore. There is every reason to believe that the movement towards lower interest rates which started with England's abandonment of the gold standard and which gathered momentum during the period of the historic conversion of Britain's War Loan has a short time ago spent itself. At any rate, no one would be justified in determining his outlook on the future merely on the strength of the tendencies in the past. In other words, there is need to take stock of the position again and to get clear about the tendencies that are at present at work. It is hardly necessary to point out that the formation of sound ideas in this regard and their general acceptance all over the world are matters of the greatest moment to the future of international trade, finance and industry. It is a matter for gratification that, as pointed out in our money market review of last week, Mr. Keynes has given out his unequivocal opinion that interest rates must undergo further fall in the future :

> "Opportunities for safe investment abroad are greatly curtailed. Britain and the United States, if they are to return to the full employment of their resources, would save sums so vast that these cannot possibly be invested to yield anything approaching 3½ per cent. No one can foretell at what point the rate of interest would reach its equilibrium level until this is approached, but I consider it highly probable that the equilibrium rate is not above 2½ per cent. for long term giltedged investment and might be appreciably less."

In this connection, it is necessary to recall the one circumstance which is apparently against this prediction of Mr. Keynes, namely, the recent rise in the French bank rate. But this is so obviously with a view to protect the gold reserves of France that it has no importance in an examination of the future trend of interest rates. More pertinent is the successful conversion operation carried about by the Italian Government during Air Mail week. The amount involved is as much as thousand million pounds and the Italian Government have succeeded in converting the interest basis thereof from 5 to 3½ per cent. And it is reported that the amount of dissenters represents less than ¼ per cent of the total. Coming after the reduction of the French bank rate it may well be regarded as a convincing reassurance that the interest rates must come down in the future; and that would mean that one of the major factors of economic readjustment will continue to be in operation.

NATIONAL INSURANCE CO., LD.

Head Office : National Insurance Building,
7, COUNCIL HOUSE STREET, CALCUTTA.

1933 Result:

New business Completed exceeds **Rs. 1,67,00,000.**

The Company with a steady progress all round.

All forms of life assurance policies issued at low safe rates of premium.

COMMUNIQUES AND RETURNS

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months' Treasury Bills were opened on Tuesday, February 27. The total amount offered was Rs. 1,73,00,000. Tenders at Rs. 99-7-9 and above were accepted in full and those at Rs. 99-7-6 were allotted approximately 85 per cent. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Rs. 2-1-4 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Tuesday, March 6. Successful tenderers should make payment on Friday, March 9. Other conditions are as usual.

Three months' intermediates will be sold from February 28 to March 5 at Rs. 99-8-0 per cent. subject to the conditions previously announced.

Three months' intermediates sold from February 21 to 26 amounted to Rs. 9,25,000.

STERLING TENDERS

The Controller of the Currency notifies that on Wednesday, February 21, tenders to the amount of £51,850,000 at 1s. 6 1/16d. were recived and allotted approximately 2 per cent.

On Wednesday, February 28, £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE

The balance of the Gold Standard Reserve on the 31st January, 1934, amounted to £40,000,000 and was held in the following form:—

	£
Cash at short notice at the Bank of England	3,497
British Treasury Bills	19,866,568

25 YEARS TEST

REVEALS THE BEST

Service: For over 25 years "The Indian Mercantile" has served the Indian Public with complete satisfaction.

"Dependable" is no exaggerated description of this indigenous concern which has at the time Assets exceeding three times its paid-up capital and has paid, with rare exceptions, handsome Dividends since its inception.

Life policies issued by this Company are scientific, up-to-date and designed to meet individual requirements at competitive rates of premium.

Agency Terms are unique and treatment sympathetic.

THE INDIAN MERCANTILE INSURANCE CO., LTD.,

11, Bank Street, Fort, Bombay.

MARKET REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March,1.

Owing to Wednesday and Thursday being Stock Exchange holidays trading was confined to 3 working days only, and during which period Government Securities were exceedingly active. Jute Mills Shares kept fairly steady, Cottons remained unchanged, while Coals had a brighter appearance.

Among Miscellaneous Industrials, Electoral Group has made a better shewing while Sugars were definitely easier owing to imposition of excise duty. Engineering Section have maintained its improvements. Teas continued dull.

Government Securities.

An all round advance in quotations was registered in Government Securities during the period under review and a very large and comprehensive business was reported especially in longer-dated loans. 3½% Government Paper opened at Rs. 86-14 on Monday and advanced to Rs. 87 when on profit-taking the rate sharply receded to Rs. 86-3. From Tuesday a better tone again prevailed and on Friday the market was again definitely firmer, 3½% Government Paper recording Rs. 87-2.

Among Railways there are still buyers for shares carry-marked up to Rs. 100-8; 3½% New Loan (1947-50) at Rs. 96-5.

A fair enquiry was in evidence for the Medium-dated issues particularly 5% Loan 1939-44.

The Bank rate remained unchanged at 3½ per cent.

Fixed Interest bearing Securities.

Jute Mills Preference Shares were in fair demand at full rates while better class Industrial issues were also well-supported.

Nothing of any particular interest falls to be reported in Debentures.

Other Industrial Stocks

Imperial Bank's fully paid up issues were better at Rs. 1,250 and Contibutories at Rs. 308. No business was reported in any other Bank's shares.

Among Railways there are still buyers for share carrying 3½% Government guarantee, but only a limited business was put through.

Hoshiarpore-Doab were marked at Rs. 81 and Saren-Serajgunge at the same figure. Shardera (Delhi) Saharanpur were dealt in at Rs. 119.

Cottons.

Only a minimum of transactions were reported in Cotton shares at about unchanged rates. Kesoram (Ordy.) were quoted at Rs. 3-9.

Coals.

The better feeling which was in evidence in this section during recently has been maintained and quotations for some of the selected stocks have improved.

Amalgamated were quoted at Rs. 14-10. Bengal advanced to Rs. 245, Burrakur (Ordy.) kept steady at Rs. 14-10, Bokaro & Ramgur at Rs. 8-2, Equitable (Ordy.) at Rs. 21-12, Katras Jherriah at Rs. 31-8, New Beerbhoom (Ordy.) at Rs. 12-10 and Sendra at Rs. 10-8.

Latest report from the Coalfields indicate that there has been a fair demand for all grades of coal, but prices show no appreciable advance.

Jutes.

Jute Mills shares have suffered a slight relapse during the week under review and rates have experienced some set-back in sympathy with easier Commodity Markets. Howrahs opened at Rs. 56-8 on Monday, but receded to Rs. 55-12. On Tuesday, the rate again improved to Rs. 56-2. At the time of writing a better tone again set in sympathy with better commodity prices and Howrahs were marked at Rs. 56-10 and Kamarhattys at Rs. 565.

Rather less business was reported among the higher priced denominations. Gourepore were bright feature and were marked up to Rs. 409. Anglo-India, Bally, Barnagore, Champadany, Dalhousie, Kankinarrah, Megna, Naddea, Orient and Union were also good features. The market closed steady.

Electricals.

Electric Supply Companies shares kept fairly steady. Upper Ganges Electrics were in better demand at full rate. Bareilly and United Provinces were also in some request.

Engineering.

This Section kept steady and a fair business was reported. Burn & Co. (Ordy.) were dealt in at Rs. 208, Indian Galvanizing at Rs. 9-4, Indian Standard Wagon (Ordy.) at Rs. 50-8 and Saran Engineering at Rs. 7-4, Indian Iron & Steel were marked at Rs. 5-2.

Sugars.

Rather less business was reported in this section and rates on balance were in favour of buyers, Balarampore were quoted at Rs. 11, Cawnpore (Ordy.) were marked back to Rs. 30-12, Champaran to Rs. 18-8, New Savan to Rs. 12-12 and Samastipore to Rs. 8-12.

Miscellaneous.

Burma Corporation were marked up to Rs. 9-10 on London buying. British Ceylon (Ordy.) Corporation were quoted at Rs. 7-4.

Among shipping India General Navigation (Ordy.) were in good demand and were quoted at Rs. 84, Port Shipping continued to be enquired for but no business was reported up to the time of writing.

Teas.

Only a small business was reported in this section and there was no feature. Bishnauth were dealt in at Rs. 28, Wagahills at Rs. 17-4, Rutema at Rs. 9-4 and Tengpari at Rs. 17-8.

MADRAS STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Madras, March, 1.

The securities market ruled firm throughout the week. The Budget for 1934-35 was fairly favourably received by the local market. There was heavy profit taking in paper and 4 per cent. 1960-70 loan which after opening on the publication of the Budget at Rs. 86-12, touched Rs. 86-5 and Rs. 100-6 respectively. The close, however, was better at Rs. 86-11 and Rs. 100-10. A large amount of business also passed in 5 per cent. 1939-44 at Rs. 107, 5½ per cent. 1938-40 Rs. 107-13, 3½ per cent. 1947-50 at Rs. 96-2 and 4½ per cent. 1934 at Rs. 101-1. Among Mysore Loans 4 per cent 1953-63 continued a popular feature at Rs. 100-5 with buyers over at the close while others showed no change.

There was no marked change in Port Trust or Municipal Debentures in the absence of sellers whilst among joint stock company debentures, United Nilgiri 7 per cent. 1943 were taken up at par. The preference share market

was fairly active Cambodia mills 7 per cent. were taken up at Rs. 114, 6½ per cent. Vasanta Mills at Rs. 105, Premier Hosiery 7½ per cent. preference at par and Deccan sugar 7 per cent. at Rs. 116; Tata Iron and Steel (2nd pref.) were a dull market at Rs. 115. Bank shares were firm Imperial Banks on heavy buying improved from Rs. 1,240 to Rs. 1,262-8 while the Contributories were steady at Rs. 311-4; Indian Bank, big shares, improved further to Rs. 94 exdividend while Mysore Banks also put on three points at Rs. 216.

Among Electric shares, Madras Telephones were asked for up to Rs. 16-12 cum-dividend whilst Rangoon Telephones had several good buyers with none offering. Rangoon Electric Tramways were done at Rs. 23-12 while Vellores sharply improved to Rs. 11-12 at the close with buyers over.

Among Cotton mills Buckingham and Carnatic (ordy shares) were taken up at Rs. 183 cum-dividend whilst Coimbators were a steady feature ot Rs. 45, Cambodias were marked at Rs. 9-4 while Kaleeswarars were a weak feature dropping ten points to Rs. 260, sellers, and they look like going down still further.

Cement shares were active and improved on the publication of the budget, and as the rumours of an excise duty proved groundless Indians were brought up to Rs. 310, Shahbadas up to Rs. 295 and Uniteds at Rs. 66.

The sugar section was fairly quiet with Deccans being a prominent feature at Rs. 272, Mysore sugars were unchanged at Rs. 11 while sugar on the whole had sellers at par.

In the Planting section Cochin Malabars improved to Rs. 1-9 and Malankaras to Rs. 35. Highland produce shares were strong at Rs. 17 on rumours of a substantial final dividend whilst both Peermades and Periakaramalais jumped two rupees closing at Rs. 29 and Rs. 49 respectively, United Nilgiris were taken at Rs. 99.

In the miscellaneous section Burma Corporations were a popular feature at Rs. 99.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Bombay, March 1, 1934.

Securities

Being budget week, exciting fluctuations transpired in the security market but eventually rates have firmed up pretty well. Government 3½ per cent loan from its last close at 85-14 touched highest just about 87 and closed yesterday at Rs. 86-11 market being closed to-day. Cash issues also show improvement. As per budget proposals the borrowing programme of the Government of India is limited to repayment of 4 per cent. 1934-37, 5 per cent. 1935 and 6½ per cent. 1935 loans, on circumstances permitting same, though further advantage may be taken if beneficials.

Shares

The steady appreciation in government securities has had its repercussion on share values. The approach of budget and various rumours about it affected the market. Cement shares at first eased a bit on being reported that levy of excise duty will be made on the Indian product, but later they firmed up when it came to be known that the industry is not going to be saddled with axation. On the contrary, neks of excise duty falling on factory production of sugar in British India, weakened Belapur shares. Textile mill shares ruled steady, centuries being in limelight—having made handsome profits. Big power shares moved narrowly. Tata Steels declined on long liquidation. Imperial Bank fully paid scrips have improved. Important scrips fluctuated as follows:

JUTE AND JUTE GOODS

JUTE

Calcutta, March 1.

Comparatively quieter conditions have prevailed in the jute market during the current week. The highest and lowest for May Futures were Rs. 32-10 and Rs. 31-4 respectively. The quieter conditions prevailed due to the easy good market. There was little support at the rise, consequently the market declined.

Business in ready First was done at Rs. 28-8. Mills also bought a fair quantity at Rs. 4-2 and Rs. 4-10 District XLR and LR. During the early part of the week sellers were reserved and business was consequently not possible, buyers not being in a mood to meet sellers but later in sympathy with the sharp decline in the values of hessians, prices of raw jute also came down and business was therefore possible at the decline.

As reported last week the trade support at a rise is poor. The tendency of the market, therefore appears for a narrow market with a day to day fluctuation caused by the usual buying and selling pressure. Sellers are fully steady in their ideas and are not willing to discount prices below a certain level. Mofussil prices are comparatively higher than those ruling in Calcutta and a resistance against a fall is distinctly visible.

London, March 1.

London raw jute market has ruled more or less featureless. Values have remained near £16-10 for March-April Firsts. Fair to good business was done, early in the week, at decline, the demand towards the close was, however, poor. Sellers are not offering very freely but buyers seem interested only at declines.

JUTE MANUFACTURES

Calcutta, March 1.

Easier conditions have prevailed in the jute goods market and values have shown a good decline. Hessian Nine porters has fallen from Rs. 10-8 to Rs. 10-2 and there has been a corresponding fall in the price of heavy goods

The decline in the values was due to the weaker cotton market and of liquidation caused by the approach of the settlement for February hessians. Exports during the month were also below expectation and naturally had a weakening effect on the market. There was no fresh business to report either from the overseas market nor between mills and bazar. Heavy goods market which was very strong during the previous week was rather easy, there being no fresh enquiry from the consuming centres.

The hessian market has been ruling steady but quiet without much business passing. The easier cotton and Wall Street reaction had an easier effect on the market but the undertone, however, is fully steady. Values have remained almost at previous week's level without any notable change.

Newyork February, 28.

The market has ruled steady with small day to-day fluctuations in the price of hessians. The volume of business [illegible] fair The buyers at the moment are waiting for developments in the Cotton market. The closing rates for nine and eleven portion hessians were 5.20 and 6.70

COTTON AND COTTON GOODS

COTTON

Calcutta, March 1.

After ruling very steady during the early part of the week the market has ruled easier towards the close. The latest quotations available are Rs. 202 for April/May Broach as against Rs. 208 the closing of the previous week. The weakness in the Bombay market was the reflection of easy conditions in New York. The feeling in the latter being rather uncertain. The long bulls seem to have been tired while the uncertainty about the passage of the Bankhead Bill hangs fire. Trade demand has also shown a little falling off and the confidence in higher prices is poor.

BULLION

GOLD

(By Wire)

(From Our Correspondent)

Bombay, March 1, 1934.

Prices ruled very quiet with a steady tone. Local rate, from the last close of Rs. 33-13-0, touched Rs. 33-12-0 and closed yesterday at Rs. 34-0-0. London god price came up from £6-16-1 to £6-16-10. The franc rate has declined from Rs. 77.78 to 76.96 while sterling-dollar quotation has eased by about 2½ points to 5.06.

The gold market during the current week has remained featureless without any appreciable change in values. London gold has remained near £6-16-6 London-New York cross rate has hovered round 5.07 and London-Paris about 77.25. Local values have ruled at about Rs. 33-12 per tola.

London Air Mail Week:

The Bank of England gold reserve against notes amounted to £190,902, 659 on the 7th instant, as compared with £190,902,554 on the previous Wednesday.

The gold market has continued to show great activity and very large amounts have been dealt with in the open market during the week. During the period February 8th—14th, about £5,800,000 changed hands at "fixing", but this represents only a portion of the business, as extensive transactions were effected after the price was fixed. Prices have been governed by supply and demand.

Large quantities of gold have been received from the Continent and there have been re-sales of gold holdings; the supplies have been acquired for the United States of America and important shipments to New York have been made, whilst further shipments for dates ahead have also been arranged.

SILVER

Bombay March 1.

Much interest was centered over the issue of the budget, whether it would reduce the duty on silver and is so to what extent. Heavy betting transactions took place to the tune of thousand of rupees.As anticipated by big operators, the duty will be reduced by 2½ annas per ounce and hence the difference between ready and March settlement has increased to about Rs. 5-12. During the period, London ready silver, after declining from 20½d. to 20 3/16d. again closed yesterday at 20 11/16d. while New Yok ready rate, after declining to 45¾, again reverted to last closing level of 46⅜ cents. Local ready rate came down from Rs. 57 to Rs. 55 and closed yesterday at Rs. 56-1-0, while March rate,

Calcutta, February 28.

Comparatively stable rates has been the feature of the week though the conditions prevailing were very erratic due to the rumours about the possibility or otherwise of the reduction in the imports duty on silver. The highest and lowest rate for Fagun were Rs. 61-4 and Rs. 60-8 respectively. The announcement by the Finance Member that the import duty on silver has been reduced from As. 7-6 to As. 5 per ounce had very little effect as the possibility of such a reduction were already discounted by the bazar. The rates for silver after the announcement remained almost unchanged. The next settlement is quoted Rs. 5 lower, than the Fagun, or almost the same as ready. The stock and other position of the market remain the same as reported last week.

London Air Mail Week:

Prices were well maintained during the past week and the market has shown a firmer tone. The buying has been principally on China account, but there has been some speculative demand and offerings have generally been very moderate. The advance in prices attracted re-selling by speculators and America was inclined to sell occasionally, but there has been no pressure.

According to reports from Washington received yesterday evening, the Secretary of the United States Treasury announced that his Government would take action "aimed at the rehabilitation of silver within a month". As no definite decision has been made as to the form the action will take, it is not possible to form an opinion as to what extent the market will be affected.

To-day, however, although New York both bought and sold, buying by the Indian Bazaars and speculators following the news, caused a rise of 5/16d., prices being fixed at 20.1/4 for cash and 20.5/16d., for two months' delivery; these are the highest quoted since May of last year.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 5th instant to mid-day on the 12 instant:—

Imports

TEA

Sale No. 35 was held on February 27 when a total of 11,689 chests were on offer, of which 2,570 chests were covered by Export Rights, and this, though small in quantity, met with good demand and the prices obtained were on the basis ruling at the previous sale.

As regards internal consumption the offerings were smaller, only 6,071 packages of leaf tea and 3,048 packages of dust were available for this week's sale. The recent decline in value was further accentuated and prices for all types, except dusts, were lower by 9 pies per lb. Certain types were now and again below 5 annas per lb. and at the lower level established there was a good demand. The Dust section of the sale met with considerably less support, and to effect, sales sellers had to accept a drop in value of 1½ annas to 2 annas per lb. over the previous week. Most lots were disposed of at this decline, however, the basis of value now being between 6 to 6½ annas against 9 to 9½ annas per lb. two week ago.

SUGAR

Little better enquiry was noticeable for spot goods early in the week, due to shortage of the ready stocks and a stiffening in rates for that reason. There was not interest in forward positions. There was too much speculation on the market as to whether the excise duty on sugar will be levied or not and if so how much. The announcement of Rs. 1/5 per cent. of excise duty placed the matters at rest and sugar prices immediately rose by Rs. 1/- per maund. It is however expected that the rise will not be long maintained due to both, interval and external competition.

MISCELLANEOUS

WHEAT

Calcutta, March 1.

During the current week, the market has ruled quiet but steady without any material change in quotations. The highest and lowest quotations for May Beta were Rs. 3-2 and Rs. 3-1 per md. During the recent rise, there has been heavy selling by "long" holders. The position of the ready is, however, fully steady, the demand from millers continuing unchanged. The prospects of the new crop are fairly good, the harvesting being satisfactory. In spite of good prospects of new crop, there is little room for wheat prices to decline.

LET US GO TO FIRPO'S

LESSON OF THE BUDGET

Budget after budget, Sir George Schuster has either enhanced existing taxes and/or imposed additional taxes. Yet, in almost every case, the revised figures have fallen short of the original estimates; and the actuals have fallen short of both. What is the lesson that this experience should teach us? The moral which Sir George has drawn is either to stiffen the grade of taxation further or to devise further new taxes. It seems to us, however, that he should have learnt an exactly opposite lesson in this school of experience. Higher and still higher grades of taxes have only resulted in the operation of the law of diminishing returns. New and yet newer modes of taxation have only proved that the taxable capacity of the population is on the poor side. With a partial recognition of this turn of events, Sir George proposes that the existing taxation arrangements would be carefully studied and scrutinised, in the coming year, by the Finance Department, with a view to evolve a more satisfactory and more reliable revenue-yielding machinery. Meantime, the very top level of the existing taxes and the very absence of any other avenue of taxation, have driven the Finance Member to the questionable device of raiding the sinking fund. This is, rid of the eloquent phrasing of Sir George, nothing but a confession of the futility of the taxation scheme which he has been acting upon. The new Finance Member will, therefore, have to apply his mind and devote his thought to newer and apter means of balancing the budget.

* * *

It were best if he viewed the problem from two standpoints: (1) How is the expenditure incurred by the Government to be so distributed among the staff as to result in a maximum consuming power on the part of Government servants? (2) How is the economic stamina of the population to be increased and, thereby, the tax-paying capacity of the country?

* * *

All the retrenchment plans and economic campaigns of the present *regime* have meant the weeding-out of the men in the bottom rungs and the imposition on the lower staff of the same cut in salary as in the higher grades. From the point of view of generating consumer demand, paying hundred officials Rs. 3,000 per month has far less effect than paying 3,000 men Rs. 100 each. The clerical and menial staff were godfatherless and mercilessly axed. Those in receipt of four-figure salaries had patrons and friends in key posts, and could see to it that their "jobs" were not axed. For these two reasons, that is, the application of a uniform percentage cut in salaries and the retirement of a far higher proportion of men in the lower ranks, the economy programme of the Government has resulted in a considerable shrinkage in the consuming power of a large body of wage-earners, which has greatly added to the maladjustment between production and consumption. Government expenditure rightly incurred and scientifically distributed calls for no economy but may play an important part in economic improvement. From this point of view, it would, therefore, be necessary for Sir James Grigg to have a thorough overhaul of the retrenchment plans now in force. In simple terms, menials and clerks must get more than what they get now—and it is absurd to continue any cut in their case—and officers should start on a lower salary and the maximum at which they finish off must also be considerably lower. In no other country is the disparity between the Mount Everest of the top staff and the Gangetic plain of the bottom staff so glaring. This kind of lob-sided and absurd system must be ended.

* * *

Even more important is the need to attend to all those measures which will revitalise India's economy. Nothing can be done in this matter by the spasmodic, haphazard and uncorrelated efforts of the Government to afford relief to this interest or that at the eleventh hour. Agriculture and industry have to be protected not when they have one foot in the grave. It is true that the State has been committed to a policy of discriminating protection. The discrimination part of it has engaged too much attention and resulted in too much procrastination and half-heartedness. The Government of India have never understood that a stitch in time saves nine. They have started mending affairs when not nine stitches but ninety stitches would be needed. A drastic revision of the economic policy of the State towards such interests as agriculture and industry is urgent and imperative.

* * *

The productive capacity of the country in regard to raw materials, foodstuffs and most of the staple manufactures has now reached the full limit. The Indian cotton mills are well able to supply all the demand in the country. So far as sugar is concerned, India will be self-contained in a year. In the class of goods that the Tata Iron and Steel Company produces, there need be no necessity for any imports from foreign countries. We produce all the coal and tea we need and a lot more. The agricultural side of production does not need any detailed reference. When such is the case, the best way of enhancing national wealth is to make sure that domestic needs are met by domestic products. As typical of the bungling methods which the Government adopt towards the fostering of industry, we need only mention that the sugar duty was, in an earlier year, raised to an unduly high level for revenue purposes while a considerable handicap is to be imposed just at the wrong psychological moment. If the policy of the Government had been directed to the fostering of indigenous industries and, simultaneously, to the protecting of the consumer, the agriculturist and the tax-payer, there was a very simple way open to them. They could have imposed an excise duty and increased the customs duty to a corresponding extent. This is the procedure which they have followed in the case of the match industry. Why should the Government show any undue concern for the importers? It is this bias in favour of imports which has made the economic policy of the State detrimental to the growth and expansion of national wealth. We have only given a typical instance and we could add many more. Suffice it to say that the time has arrived when suitable machinery should be created for the evolving of a national economy policy and the formulation of a national economic plan. A heartening sign of the times is that even the European community have come to realise the need for positive and constructive action in this direction. Mr. F. E. James urged a plea in this behalf in his discussion on the Reserve Bank Bill. Sir Leslie Hudson, the leader of the European group in the Assembly, is to bring up this question in the debate on the budget. The main task of Sir James Grigg will be to lay down a wholesome economic policy, devise a comprehensive economic plan and set up an expert economic council. This and this alone will balance the budget not only of the Government but of the millions in the country.

GATEWAYS OF FOREIGN TRADE

An examination of the various Indian ports for the year 1932-33 is useful, in spite of the fact that the experiences for which a complete record is available relate to a period which is nearly a year old. For it reveals a number of developments, which not only raise important problems for the present, but also open out vast possibilities for the future. Firstly, the trade of the oldest ports has shown a marked shrinkage during the period which was the nadir of the depression. In Calcutta, the total volume of traffic decreased by 436,226 tons compared with the preceding year and 3,378,970 tons compared with 1919-20, to 7,492,196 tons. Bombay accounted for a decline, in total volume, of 449,000 tons to 4,689,000 tons. Secondly, the reduction in the volume of trade and, consequently, of the receipts have seriously affected the financial position of the ports and forced the administrations to encroach upon the accumulated reserves of past years.

* * *

It might be thought that financial disequilibrium during a period of such intense depression in trade is only to be expected and that with a revival, which is already believed to be well on the way, normal conditions will reappear. But it should not be forgotten that the financial policy of the major ports had been none too reassuring in the past and that the fall in the traffic handled at these ports is not all due to the trade depression. New rivals have sprung up in recent times. It follows from this that the port administrations will have to deal in the future with a situation which is the combined result of unwise financial policies in the past, the severity of the trade depression and the competition of ports newly opened. Readers of *Indian Finance* will hardly need to be told in detail about the financial embarrassments of the Port of Calcutta. In the first place, it has incurred in the King George's Docks a capital expenditure, the interest on which was debited to capital account for a longer period than is permissible under sound financial principles. In the framing of the budget, the authorities took credit for unrealised appreciation in the value of their securities. Levies, which at the time of their inception were intended to be temporary and of an emergency character, were made normal and permanent and new ones were added thereto. The effect on port charges may be easily imagined. Even if other factors were not present, the increase in port dues should by itself have brought about a diversion of trade. As for Bombay, some of its difficulties were touched on by our Bombay Correspondent in last week's "Gateway of India". That the differential port dues between Bombay and the ports of the Native States have acted to the serious detriment of the latter cannot be contested. A position like what the Bombay and Calcutta ports find themselves in is somewhat in the nature of a vicious circle, reduction of port dues being dependent on expansion of traffic and vice versa. Karachi and Madras have similar if not identical problems. And though their intricacy cannot be denied, it must be admitted that the administrations of our major ports have never been noted for their zeal for economy.

* * *

For the present the most important fact to be observed from a study of the reports is the growth and development of new ports which offer competition to the already existing ones, and cause trade to be deflected from their usual channel. Chittagong has for a very long time accounted for part of the trade of Calcutta. But Vizagapatam on the East coast and Cochin on the West are of recent origin and development. Though the plan for the development of Vizag into a harbour was before the Government of Madras for nearly 35 years, the harbour was opened for shipping only as recently as 7th October 1933. The importance of Vizag lies in its being "The Port of the Central Provinces" bringing Central India with its trade in groundnuts and manganese 160 miles nearer the sea than before. It is estimated that the annual shipments of manganese ore from Vizagapatam may amount to 500,000 tons and groundnuts 60 to 80 thousand tons. Railway facilities and harbour amenities are adequate, though there is still room for further extension and improvement. And it is not unreasonable to hope that the authorities, who are responsible for shaping Vizagapatam to the present position and importance will not slacken in their efforts to further improve the harbour. Considered this way, the future of Vizagapatam is as great as one might wish.

* * *

Cochin is in very much the same position as Vizag, though its importance is even greater, having

regard to its natural harbour, now developed, and the marketable produce that it has to handle. It is the only port for South India on the West Coast. It is situate 580 miles south of Bombay and is the only good harbour in the long coast line from Bombay round Capre Comorin to Madras. And naturally most of the trade of South India that Bombay and Madras shared between themselves will be diverted to Cochin. This fact is illustrated by the growing volume of trade passing through the port. From 350,000 tons in the immediate pre-war years, it has grown to 450,000 tons in 1929-30 and 580,000 tons in 1932-33 and it is a testimony to its further prosperity that the revenues of the port have gone up from Rs. 10 lakhs in 1925 to Rs. 40 lakhs. The harbour is in its fourth stage of development, and with its completion the present metre gauge railway will be converted into broad gauge. The harbour arrangements are, it is reported, extremely efficient.

* * *

The trade of Bombay is affected not only by Cochin but a real menace exists in the rise of the ports of the Kathiawar States. Attention was drawn to this aspect of the matter in our last week's issue by our Bombay correspondent. Though reference was made to Bombay's loss of the cotton trade to the Bhavanagar ports, trade in general was being diverted to these ports over a long time though it is only recently that such diversion has assumed menacing proportions.

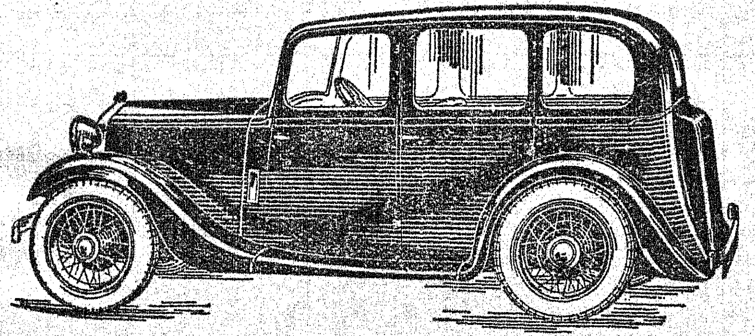
* * * *

But Karachi has the most to fear from the growth of new ports. The Rulers of Cutch and Nawanagar have been devoting serious attention to the development of the ports in their respective states. As the result of a survey carried out by Messrs. Meik and Buchanan for the State of Cutch, a scheme has been drawn out for the development of the port Kundla which, it is hoped, will be finished by April 1934. It is stated that its prospects are limitless, particularly in view of the demands of trade with Northern India. And the States Enquiry Committee in the course of their report say that, though the port of Kundla does not handle a large volume of trade, its competition will become formidable in the course of the next few years. Bedi is the chief port in Nawanagar, though Salaya, it is claimed, is capable of becoming a second Liverpool on proper development. Bedi as a modern, cheap, safe and labour-saving port owes much to the efforts of the late Jam Saheb. As a result of the enormous cost to develop Bedi Bunder into the modern Bedi, the total tonnage of imports had increased from 26,151 tons valued at 37½ lakhs in 1907 to 152,393 tons valued at 2,41 lakhs in 1931. It is also important to note that in 1917 a treaty was concluded by which the Nawanagar ports along with the other maritime states of Kathiawar acquired the same rights as the British Indian ports. In 1923 these treaty rights were withdrawn from the Nawanagar ports; but the withdrawal was cancelled subsequently. Now that the ports have cut such a big hole in the finances of the Bombay port, it behoves the Government of Bombay and the Government of India to examine the position and put it on a sound and stable basis. The occasionis also opportune for clearing the tangled web of ports development and competition, deflection of trade and trade treaties, on a satisfactory solution of which India's trade in particular and economic prosperity in general largely depend.

* * *

An examination of the reports for 1932-33 shows that the future of ports in India has two distinct aspects. The bright side of it is that a vast country like India which was hitherto served by only five major ports is shortly to have a number of new ones, each serving a hinterland whose development was badly handicapped by the enormous distance of the

THE
WOLSELEY HORNET



The fame of the Wolseley "Hornet" has spread throughout the world, and this new 1934 model marks another great advance in the 12 h.-p. six-cylinder class. The specifications include a host of special features, prominent among which are the underslung compound frame, four-speed synchromesh gearbox with "Silent third," and controlled free wheeling of the well-tried and successful Wolseley type. We shall be pleased to forward specifications and arrange demonstrations.

G. McKENZIE
and Company (1919) Ltd.

208, Lower Circular Road, Calcutta.

nearest ports. This opens up the possibility of a quickening and enrichment of economic life in these parts of the country. The other aspect is the increasing difficulties of the older ports. The only basis on which the conflict between these two aspects may be reconciled is that, through the keener competition engendered by the rise of the new ports, the older administrations would bring about genuine economies and that Indian trade will so expand in the future as to give full employment to all the ports.

ECONOMICS & POLITICS

The difference between the modern State and the State of earlier periods in history, we found in our enquiry of last week, lies in that the former lacks altogether in any clear formulation of an adequate scheme of life for the individual. The distinguishing features of the modern State, therefore, are a democratic form of government in which the masses are content to be led by the scions of he old ruling classes, a sentiment of aggressive nationalism actuating the large body of citizens, its successful exploitation by the capitalist classes in their own interest, an acceptance of the general principle of individualism in the political and in economic spheres and a recognition of its sanctity particularly in the latter. All these taken together make up the modern State and yield as their natural consequence the complications and chaos of the present situation. It need hardly be said that if the Renaissance and the Reformation gave the modern State its form, it was the industrial revolution that determined its character as an aggressive class state with a growing indifference to the intimate needs of the individual. So far as the consolidation of power, whether within or abroad, was concerned, the individualist principle was conveniently modified, and even socialism—we mean socialism as a political principle—was readily adopted. But when it was a question of discharging duties to the individuals, individualism appeared as a principle of self-evident sanctity. We do not seek at this stage to emphasise the selfish character of governmental power. We seek rather to trace the manner in which individualism came to be a danger to the individual and every modification thereof a source of complication in social affairs.

* * *

Let us recall the first battle between individualism and socialism. It was when the industrial revolution had progressed to the point of endangering the life of workmen and the health of the public. Abuses of individual liberty had become numerous and flagrant; and factory laws and regulation of child labour were clearly urgent and imperative. But opposition was raised, not on the score of private interest, but on the strength of the supposedly axiomatic individualism. The reformists gained the day; then came the question of compulsory primary education. Individualists again made themselves ridiculous; and even the right of the parent to add to his income with the hire for his child's labour was mentioned. But common sense again prevailed. The nineteenth century saw more breaches in political individualism. Old age pension and unemployment relief came on. Individualism fought with its back to the wall. But it lost the battle; democratic politicians overpowered their opponents.

* * * *

The significance of the grant of unemployment relief must be clearly appreciated.. Leaving aside the insurance part of it, which is supposed to have an actuarial basis, the "dole" is often classed with the "bread-and-circus" of the degenerate days of the Roman Empire. It is true that the politicians who brought about the "dole" had their eye on the vote of the labouring classes. It is also true that there is more moral justification for unemployment relief; and the "dole" attached an unmerited stigma to unemployment relief. But the institution of the dole was an unfortunate recognition of the claim of industry to carry on on its grossly individualistic basis, regardless of the fate of the individual. In fact, every apparent surrender of the principle of individualism ultimately tended to relieve the economic system of its responsibilities to the individual. A democratic government necessarily sets its limits to this indifference to the individual; and hence came the dole and other deplorable palliatives for a chronic malaise which was growing more serious every day. In fact, the palliatives aggravated the disease and complicated the condition of the patient still further. Public money is no man's money; and during a period of economic stress it is a case of no money. Just when the dole is needed most, there is little or none of it. Industry, which has to contribute to the taxes, has less of the wherewithal to pay. Employment dwindles and there are more clamouring for

relief. Economic and financial crises are rolled into one ; and political crisis naturally follows in their wake.

* * * *

We have digressed. What is important is that the weakening of individualism in the political sphere has really tended to strengthen it in the economic sphere, and the consequences of this incongruity in social affairs have already been touched on in brief. It is significant that the last stage of the development of this incongruity was marked by the general acceptance of the fashionable distinction between political and economic questions. Those, who were anxious to preserve economics as the citadel of individualism, deliberately heaped more and more contempt on the politician as an inefficient and corrupt busy body and belauded the businessman as an efficient and unostentatious servant of society. "Let us not bring in politics"—was the usual cry ; and it was sure of immediate deference. How many stop to think that the people, who first used the term, regarded politics, as the means of the highest self-expression alike for society and the individual? If politics is hateful, it is not because that it is an inherently sordid game, but it has been rendered sordid by groups and individuals who seek to pass off their selfish interests as the highest social ends. When we denounce politics, let us be clear that our revulsion is for dirty party politics and not for the process by which society evolves its own ends and seeks to achieve them.

* * *

And what society can exclude the material well-being of its members from the scope of its corporate effort? The division between economics and politics is thus clearly irrational and calculated to prejudice issues most fundamental to human well-being. It arose from an unstated premise that economic life is the affair of the individual and that society has only to secure freedom from internal disorder and external aggression, to frame a set of laws by which business dealings will be kept down to a level barely short of dishonesty or fraud, and to provide the means or medium of exchange, the character and volume of which no one attempted till the most recent time adequately to understand. And yet a little reflection will show that economic activity is as social as the preservation of peace. One might go farther and say that, while at a certain stage in social evolution, the task of preserving the peace may be relegated to a comparatively small constabulary, to preserve the economic life of a community would require a much more broad-based and far more sustained corporate effort. Time was, no doubt, when the co-operative and social character of the economic life was so negligible that it called for little of social regulation. But with the growing complexity of economic life and the intricacy of the interrelation between the various parts of the economic machinery, economic questions, which concern society as a whole and which can be settled only by careful concentration of social wisdom are daily on the increase. If economic questions are outside the pale of politics, in the sense that the chosen representatives of the people ought to have as little to do with the decisions as possible, one wonders what would be the consequences of a continued abdication of the sovereign demos in a sphere of such vital social interest.

* * *

It should, perhaps, be pointed out here that in recent times at least the prejudice against politics was in reality a prejudice against the average politician and that there were many who believed honestly that economic problems were such as politicians were unfitted to handle. The most notorious instance of such unfitness is the Treaty of Versailles with the subsequent treatment of the question of Reparations. While the charge against the politician may be left to stand as it is, it is still an open question whether businessmen could immediately after the War have handled the question of reparations with any more of sanity than the politician ; and it should not be forgotten that big business contributes a big quota to the fund of political jingoism in every country. It might well be that we require a new class of politicians to tackle the economic problems that have now arisen for solution. To denounce contemporary politicians is one thing ; it is quite another to keep economic questions out of the purview of politics, for that would amount to a denial of the social importance of economic problems.

* * *

The question we have now considered is relevant to our enquiry as suggesting that the distinction between politics and economics, as it has been made and pursued, is the most grotesque instance of our failure in the apprehension of social purposes. It has also been the cause of that utter lack of scheme of individual life which, we found, is the most momentous difference between modern polity and the polity of any earlier period. We have need to realise that though many social problems are best thought out, on the basis that society is a unit and a whole, it is individual well-being that is ultimately the touchstone on which the worth of social policy can be tested.

AN INDIAN NAVY

It is satisfactory that the Indian Navy (Discipline) Bill has been circulated for eliciting public opinion instead of being rushed through the present subservient Assembly. A similar measure was defeated exactly six years ago in the Assembly when the opposition was led by Mr. (now Sir) R. K. Shanmukham Chetty. The basis of the opposition was two-fold. While India is to pay for this privilege of having a "Navy" of her own, neither will the *personnel* be Indian nor will the control be in the hands of the Indian Legislature. The scheme, as worked at present, provides for one vacancy in every three being reserved every year for an Indian if a suitable candidate is available and as there would be three vacancies annualy, the rate of Indian recruitment is one mn per year! The Navy will, therefore, be manned entirely by British officers for decades to come and it will take several years before it will be officered by Indians. Moreover, Mr. Tottenham's vague statement that it was the Government's "intention" to consult the Indian Legislature "as far as possible" whenever the Indian Marine was lent to the Admiralty for operations other than for the defences of India is hardly satisfactory. It should be definitely provided in the measure that the Indian Navy should not be used for any other purpose but the defence of India and if so used, it should not be done without the previous consent of the Indian Legislature and the cost of such operations should be borne by the British Exchequer. No doubt, the control of the Indian Legislature over the Navy will be the same as that over the Army, which is *nil*. But when the Army was created, it was not with the consent of any legislature and it is preposterous to seek to establish a Navy *through* the Legislature over which the Legislature will have no control whatsoever. The pace of Indianisation should be quicker and it should be laid down that the personnel recruited henceforth must be Indian. We are surprised that the Army Secretary remarked in the course of his speech that "Indians had not shown the same aptitude as Englishmen for a sea-faring life." We had thought that such puerile generalisations were things of the past especially when Indians are taking increasingly to marine services and proving entirely successful. We presume that the reason for shutting out Indians from the Air Force is that Indians are not air-minded enough although the Britishers cannot claim that they have ancient air traditions along with their sea traditions! As a matter of fact, it was not an Indian nationalist but Rear-Admiral Sir Humphrey Walwyin, Flag-Officer Commanding, Royal Indian Marine, who was gratified at the remarkable aptitude for sea-life and the still more remarkable proficiency that Indian boys displayed in their work in the Royal Indian Marine. "If there is any one, who says Indians cannot make very good seamen," he once publicly declared, "give him my name and address." We would, therefore, give Mr. Tottenham the name and adress of the Head of the Royal Indian Marine which he proposes to convert into the Royal Navy, manned by Britishers and controlled by the Admiralty at the expense of the poor Indian tax-payer.

CIVIL WAR IN AUSTRIA

As nations sit in fruitless conclave trying to evolve a basis for disarmament as a sovereign remedy for world peace, the streets of the foremost cities of the world are filled with the din and fury of sanguinary battles. As peace descended on a war-battered world in 1918, after the titanic struggle that caused such a setback in civilisation and progress, it was thought that the horror of a recourse to arms and its futility as a means of settling disputes would be a lesson humanity would not soon forget.

* * *

And yet war and bloodshed have obviously come to stay. No sooner does the fighting subside in the Far East but the echoes are taken up by contending parties in the streets of some Western town. Indeed, the demoniac fury with which people are rushing to slaughter and bloodshed—people, not merely of widely different cultures but neighbours and fellow-citizens bound by the same bonds of tradition and nationality—makes one despair of a return to sanity and tolerance which, after all, are the first essentials of progress.

* * * *

The Civil War that broke out in Austria on February 12 is, to all intents and purposes, a conflict between the Heimwehr, the Austrian, Fascist private army drawn from the rural, Catholic, conservative population of eight out of nine States that constitute the Federation and the Schutzbund, the non-clerical, Social-Democratic private army of the urban population of Vienna. The trouble started at Linz, the capital of Upper Austria, whre the Government's public servants are reported to have met with armed resistance from the Social-Democratic party while attempting to occupy their headquarters. Major Fey, the Vice-Chancellor, who was deputising in the absence of Dr. Dollfuss in Budapest as the head of the Federal Government, at once ordered a forcible suppression of the insurgents. And the thoroughness and remorselessness of that suppression will be at once apparent from the report that light and heavy artillery were trained on the famous tenement houses of Vienna with the resultant indiscriminate destruction of life and property.

* * *

And yet in Dr. Dollfuss's struggle to have Austria from the Nazi menace, it was the Social-Democrats who have repeatedly rallied round his flag while the Fascists have either evaded the issue or openly rejected the call for help. And the antagonism of the rural, conservative Fascists to the socialist, urban population of Vienna, however radical or basic, was never aggravated by the unreasonableness of the Social-Democrats or their attempt to break away from the bourgeoisie. Indeed, islanded as they were in the middle of a conservative population, their ability to maintain an equipoise in the midst of their surroundings was little short of marvellous. Nor were they of the ordinary obstructionist and revolutionary type to which communists and Fascists, for instance, have been found to belong. They have achieved certain social triumphs of which the modern world may well be proud. The tenement houses of Vienna are a model for any nation who wants to tackle the problem of housing its working classes.

* * *

And yet these were the people on whom Major Fey let out the full blast of his imperialistic fury for apparently no more reason than that they should hold other views. Dr. Dollfuss may not have full sympathy with the activities of Major Fey. But what becomes of all the pretentious anti-Nazi stand we have heard so much about when, during his short absence, his own henchman out-Hitlers Hitler in his own domain?

(Continued from page 478.)

speech, we may say that, European or Muslim or Hindu, the economic interests of India are, in their fundamentals, free from the rancour and controversy which political questions give rise to.

The exchange market has been very much steadier—fully steady almost to firmness. Money has been tight and in good demand at the close, with supplies difficult to get. Contrary to general expectations, applications on the sterling tender day came to nearly £50 million; and allotment was on a 2 per cent. basis. This imparted a steady tone to the rupee-rate.

The closing rates are: 1s. 6 1/16d., March T.T.; 1s. 6 9/64d., April 15 T.T.; 1s. 6 1/32d., April 16—May 15 T.T., with 1s. 6 1/32d., available for all-May T.T.; 1s. 6d., June-July T.T.; and 1s. 5 31/32d., August-September T.T. Bills may be quoted: 1s. 6 5/32d., March; 1s., 6 9/64d., up to April 15; 1s. 6 1/8d., April-May; and 1s. 6 3/32d., June-September.

The demand for money was far in excess of the funds available. Rates rose to $3\frac{1}{2}$ per cent. in Calcutta and 4 per cent. in the Western capital. Firms' money for call, three days' notice and seven days' notice was quoted $\frac{3}{4}$ per cent. One and twomonth deposits were quoted $1\frac{1}{4}$ per cent. and threemonth deposits $1\frac{1}{2}$ per cent.

The three annual sensations in the Indian markets are the preliminary jute forecast, the final jute forecast and the budget. For a few weeks prior to each of these expectation-filled fixtures, tipsters are busy ; prophets and soothsayers ply a thriving trade ; and market quotations undergo violent oscillations according as this tipster or that astrologer is in favour. The Writers' Buildings in Calcutta and the Imperial Secretariat in Delhi become transformed, on such occasions, into temples of hope, centres of mystery, haunts of busybodies. An occasion of only slightly less importance arises in connection with announcements of rupee loans. The scene in this case shifts from Writers' Buildings and New Delhi Secretariat to Dalal Street in Bombay. It is not all tipsters that turn out infallible. It is not all soothsayers that are invested, in popular esteem, with the halo of authority. Whether those who proffer these tips for a consideration—and a hefty consideration at that—get their information straight from the horse's mouth or whether it is only a case of accidental fulfilment of conjecture is more than I can say. Nor, if I understood the gravity of libel action, should I be rash in making any positive statement in this regard. But there is certainly a widespread impression in Clive Street that a good few speculators do succeed in making their plans and guiding their gambles by a definite leakage of absolutely correct information in regard to the figures, the guarding of whose secrecy engages the concern and strains the alertness of the Agricultural Department of the Government of Bengal. These patrician tipsters, who have access to the almighty gods and who had, in the past, successfully aided and abetted the speculative programmes initiated by market-folk, directed a few of their friends on what has turned out to be a false scent in regard to the butget. So far as Calcutta was concerned, hectic gambles were inspired by anticipation that the salt duty was to be increased.

* * *

The discomfiture that followed the revelation about the *status quo* as regards the salt duty is thus described by a piquant writer in a fine and racy "budget gossip" in the columns of the *Amrita Bazar Patrika* :

> "The greatest disappointment has been for the speculators who purchased heavy quantities of salt in expectation of a rise in the import duty. During the fortnight it was considered an open secret that the duty would be raised by four annas per maund. At least ten lakhs maunds of duty-paid salt was removed from the steamers and local salt-golahs. As the Customs authorities could not cope with such a sudden demand, representations were made to the Government of India through the agency of some of the Chambers of Commerce in order to facilitate the removal of salt. And how could it be disbelieved? Because the almighty 'tipster' had recently been successful in accurately forecasting the final jute forecast, so why should he not be equally successful in regard to the Indian budget? Last evening the credulous speculators learnt to their great cost that there is a gulf of difference between Writers' Buildings and the Imperial Secretariat".

Bombay was, however, correct in its pre-budget moves in anticipation of a reduction in silver duty. All India sugar concerns had, in sheer resignation, cleared the stocks from the godowns, apprehending either an excise duty or removal of the surcharge.

* * *

There was no breath of whisper in regard to the match excise, which is, however, an ill wind that has blown some good. The match manufacturers now find themselves owners of substantial unearned increments on their large stocks of match boxes. A Calcutta magnate finds his books improved overnight by Rs. 10 lakhs on the right side. I dare say, the Swedish-controlled concerns would be in receipt of even heavier windfalls. My friend, Mr. Jamal Mahomed, and his compeers in business must be vastly upset by the repeal of the export duty on hides. And the tanning industry of South India, already in distress, must be now in its last gasp. When one comes to think of it, one almost suspects something of an antipathy to Indian interests in the new taxation plans. Four industries are involved, namely, the sugar, the tanning, the matches, and the cigarette industries. The first two are predominantly in the hands of Indian industrialists. And they are to be penalised without a corresponding or any compensation. The match industry, in which the largest interest is held by the Swedish Combine, is given a pull-up exactly equivalent to the push-down. An excise duty of Rs. 2/4/- per gross of boxes is to be levied ; at the same time, the customs duty is to be correspondingly raised so as to maintain the present level of protection. The cigarette industry is the more or less complete monopoly of the Imperial Tobacco Company to whom it is immaterial whether manufactures in the future are to be continued in the factories in India or re-diverted to the factories in Britain. The reduction in the duty on cigarettes and the increase in the duty on raw tobacco will have the effect of this monster combine preferring to manufacture in England. Lesser wages paid out in India, and greater employment in the home country ! Why was not an excise duty levied on factory-produced cigarettes?—I will pause for an answer from Lala Shri Ram.

* * *

Which reminds me that I have been remiss in my notice of the change-over of the management of the Begal Potteries to the Delhi Captain of industry. No provincial feeling is involved because the alternative was the effacement of the Pottery manufacture from Bengal. This is one of the many concerns, the inspiration and resources for which were supplied by the late Maharaja of Kasimbazar. He sunk a considerable sum in the equipment and the initial work-

ing. The concern was turned into a public limited company in 1919. The company boom of 1919-21 may be said to have been inaugurated by the Bengal Potteries in Calcutta and the Jupiter and New India in Bombay. The shares of the Potteries were taken up by an avid public. Allotment was on a fractional basis. The shares shot up to a giddy height. And everything was O.K. to all outward appearances. But everything was not O.K. All the capital put up by shareholders was used up in fixed block. Working capital was nil. The Company borrowed the requisite amount. The profit and loss figure could not be coaxed to appear on the left-hand side. More and more losses were carried forward and appeared as a disfiguring and fictitious item on the assets side. More and more borrowing. The creditors were many ; the total debt was heavy ; the embarrasments were almost insurmountable. The directors blamed the expert ; the expert returned the compliment with added frenzy. And it was all a heart-rending business.

Efforts to raise funds for wiping off the debts and for starting with a clear slate and with adequate resources, proved unsuccessful. It is in this state of affairs that Lala Shri Ram has been prevailed upon to undertake the responsibility of management and the financing of operations to full capacity. He has no easy task ahead of him. Some part of the plant is obsolete. Modernisation of equipment is essential. The quality of the goods has to be improved. A larger market has to be developed. Old connections have to be revived, strengthened and expanded. In a programme so arduous, Mr. Shri Ram has, as his lieutenant, Mr. Bhagat, who has already made his mark in the Gwalior Potteries and who has proved that goods of the right quality at the right price could be produced in India. The great advantage with which they start is, however, this: The works of the Pottery are well laid-out, well-equipped in most particulars, and stupendous enough to enable the manufacture of goods in quantities adequate for the domestic supply.

* * * *

The annual session of the Federated Chambers of Commerce, which will be presided over by Mr. Nalini Ranjan Sarker, will be held in Delhi by this month-end. And two matters, which will be likely to evoke lively discussion, are the committee's rejection of the application of the Bombay Shareholders' Association for membership of the Federation, and the resolution to confine membership of the Committee to those engaged in trade, commerce or industry. My Bombay Correspondent says that opposition to the admission of the Shareholders' Association was voiced by the two important delegates from Calcutta, namely, Mr. Sarker and Mr. Khaitan. It would appear that it was pointed out by some members at the meeting that amongst the affiliated bodies of the Indian Chambers of Commerce of this city is a shareholders' association. Mr. Khaitan is a leading figure in the Indian Chamber ; and if he has no qualms about admitting a shareholders' association to his parent chamber, why should he fight shy of a similar proposition in the case of the Federation?—this is the simple question which my Correspondent has raised. I was myself hoping to furnish an answer after a discussion with Mr. Khaitan. But I should today content myself, in the absence of such a discussion, with a like interrogatory mood.

* * * *

The other question about the class of members to be eligible for the Committee was raised last year and had to be postponed owing to this proving an extremely controversial theme. As it is, the present rules have so far been a sufficient safeguard against undesirables and untouchables on the Committee. If the men in power seek to tighten the rules further, it is sure to confirm the impression that is now prevalent, namely, that they are anxious to strengthen and secure their power against any manner of attack from the opposition.

* * * *

Immediately following the annual session of the Federation, a Conference of Indian Insurance Companies is to be held on April 3 and 4.. These days have been fixed up after consultation with the President of the Indian Life Assurance Offices' Association and the President of the Federation of the Indian Chambers. A large number of Indian offices have signified their willingness to join the Conference. Its aim and object would be to find ways and means to counteract the adverse circumstances with which every Indian insurance office in this country is confronted. A reception committee has been formed, and without any desire to restrict the scope of the conference, it has been decided that special attention should be devoted to the following subjects:

1. Constitution of a standing committee for holding the Conference every year.
2. Methods of popularising indigenous insurance in all directions.
3. Government and insurance with special reference to
    - (*a*) State competition through Postal Insurance.
    - (*b*) Defects in the present laws pertaining to Insurance.
4. Expenses of the Companies with special reference to cost of procuring new business.
5. Agency contracts and the manner and methods in which these are being worked.

Life Insurance

Claims with special reference to (*a*) delay in their settlement and (*b*) Growing tendency towards increase in the number of claims during the first year of the issue of policies.

As Indian insurance business has been going ahead on all fronts, it is meet and proper that as many occasions as possible are created for the coming together of the chief men engaged in this branch of economic activity, with a view to enable them to concert measures in mutual understanding, to exchange ideas, and to improve the level and quality of service which the Indian offices, jointly and severally, can render to the public. Amidst the devastating gloom of universal economic distress, the one cheering prospect is the marked acceleration in the pace of the progress of indigenous insurance. I accord the Conference the fullest support in the hope that it will further strengthen the capacity for progress, by the elimination of those defects and deficiencies of management and investment policies which are, I am grieved to say, allowed to thrive in some cases without the necessary pulling up either from the Government or the public or the better class of insurance offices themselves.

* * * *

To say that the *Weekly Jute Review,* of which we have received the first three issues, supplies a long-felt and sore-felt want were mere superfluity. And to say that Mr. H. P. Bagaria is the one Clive Street man who is best fitted to edit it is to paint the lily. The *Review* makes its *debut* in conditions of good and encouraging augury. Were I to write aught more of the new-comer, I might be charged with indulging in the pastime of "Scratch my back, I shall scratch yours." I shall, therefore, just say that both the *Review* and its talented Editor are assured of a rousing reception in the world of journalism.

U. S. GOLD RESERVE ACT OF 1934

FULL TEXT OF MR. ROOSEVELT'S PROCLAMATION

The following is President Roosevelt's Proclamation, signed by him on January 30.

An Act to protect the currency system of the United States, to provide for the better use of the monetary gold stock of the United States and for other purposes..

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled.

That the short title of this Act shall be the "Gold Reserve Act of 1934."

Section 2 (a). Upon the approval of this Act all right, title and interest, and every claim of the Federal Reserve Board, of every Federal Reserve Bank, and of every Federal Reserve agent, in and to any and all gold coin and gold bullion shall pass to and are hereby vested in the United States ; and in payment therefor credits in equivalent amounts in dollars are hereby established in the Treasury in the accounts authorised under the sixteenth paragraph of Section 16 of the Federal Reserve Act, as heretofore and by this Act amended (U. S. C., Title 12, Section 467). Balances in such accounts shall be payable in gold certificates ; which shall be in such form and in such denominations as the Secretary of the Treasury may determine. All gold so transferred, not in the possession of the United States, shall be held in custody for the United States and delivered upon the order of the Secretary of the Treasury; and the Federal Reserve Board, the Federal Reserve banks, and the Federal Reserve agents shall give such instructions and shall take such action as may be necessary to assure that such gold shall be so held and delivered.

(b) Section 16 of the Federal Reserve Act, as amended, is futher amended in the following respects :

1. The third sentence of the first paragraph is amended to read as follows :

"They shall be redeemed in lawful money on demand at the Treasury Department of the United States, in the city of Washington, D.C., or at any Federal Reserve bank."

2. So much of the third sentence of the second paragraph as precedes the proviso is amended to read as follows :

"The collateral security thus offered shall be notes, drafts, bills of exchange, or acceptances acquired under the provisions of Section 13 of this Act, or bills of exchange endorsed by a member bank of any Federal Reserve district and purchased under the provisions of Section 14 of this Act, or bankers' acceptances purchased under the provisions of said Section 14, or gold certificates."

3. The first sentence of the third paragraph is amended to read as follows :

"Every Federal Reserve bank shall maintain reserves in gold certificates or lawful money of not less than 35 per cent. against its deposits and reserves in gold certificates of not less than 40 per cent. against its Federal Reserve notes in actual circulation : provided, however, that when the Federal Reserve agent holds gold certificates as collateral for Federal Reserve notes issued to the bank such gold certificates shall be counted as part of the reserve which such bank is required to maintain against its Federal Reserve notes in actual circulation."

4. The fifth and sixth sentences of the third paragraph are amended to read as follows :—

"Notes presented for redemption at the Treasury of the United States shall be paid out of the redemption fund and returned to the Federal Reserve banks through which they were originally issued, and thereupon such Federal Reserve bank shall, upon demand of the Secretary of the Treasury, reimburse such redemption fund in lawful money, or, if such Federal Reserve notes have been redeemed by the Treasurer in gold certificates, then such funds shall be reimbursed to the extent deemed necessary by the Secretary of the Treasury in gold certificates, and such Federal Reserve bank shall, so long as any of its Federal Reserve notes remain outstanding, maintain with the Treasurer in gold certificates an amount sufficient in the judgment of the Secretary to provide for all redemptions to be made by the Treasurer. Federal Reserve notes received by the Treasurer otherwise than for redemption may be exchanged for gold certificates out of the redemption fund hereinafter provided and returned to the reserve bank through which they were originally issued, or they may be returned to such bank for the credit of the United States."

5. The fourth, fifth and sixth paragraphs are amended to read as follows :—

"The Federal Reserve Board shall require each Federal Reserve bank to maintain on deposit in the Treasury of the United States a sum in gold certificates sufficient in the judgment of the Secretary of the Treasury for the redemption of the Federal Reserve notes issued to such bank, but in no event less than 5 per cent. of the total amount of notes issued less the amount of gold certificates held by the Federal Reserve agent as collateral security ; but such deposit of gold certificates shall be counted and included as part of the 40 per cent. reserve hereinbefore required. The Board shall have the right, acting through the Federal Reserve agent, to grant in whole or in part, or to reject entirely the application of any Federal Reserve bank for Federal Reserve notes ; but to the extent that such application may be granted the Federal Reserve Board shall, through its local Federal Reserve agent, supply Federal Reserve notes to the banks so applying, and such bank shall be charged with the amount of the notes issued to it and shall pay such rate of interest as may be established by the Federal Reserve Board on only that amount of such notes which equals the total amount of its outstanding Federal Reserve notes less the amount of gold certificates held by the Federal Reserve agent as collateral security. Federal Reserve notes issued to any such bank shall, upon delivery, together with such notes of such Federal Reserve bank as may be issued under Section 18 of this Act upon security of United States 2 per cent. Government bonds, become a first and a paramount lien on all the assets of such bank..

"Any Federal Reserve bank may at any time reduce its liability for outstanding Federal Reserve notes by depositing with the Federal Reserve agent its Federal Reserve notes, gold certificates, or lawful money of the United States. Federal Reserve notes so deposited shall not be reissued, except upon compliance with the conditions of an original issue.

for currency issued by the United States, only to the extent necessary to maintain such currency at a parity with the gold dollar."

Sec. 10. (*a*) For the purpose of stabilizing the exchange value of the dollar, the Secretary of the Treasury, with the approval of the President, directly or through such agencies as he may designate, is authorized, for the account of the fund established in this section, to deal in gold and foreign exchange and such other instruments of credit and securities as he may deem necessary to carry out the purpose of this section. An annual audit of such fund shall be made and a report thereof submitted to the President.

(*b*) To enable the Secretary of the Treasury to carry out the provisions of this section there is hereby appropriated, out of the receipts which are directed to be covered into the Treasury under Section 7 hereof, the sum of $2,000,000,000, which sum when available shall be deposited with the Treasurer of the United States in a stabilization fund (hereinafter called the "fund") under the exclusive control of the Secretary of the Treasury, with the approval of the President, whose decisions shall be final and not be subject to review by any other officer of the United States. The fund shall be available for expenditure, under the direction of the Secretary of the Treasury and in his discretion, for any purpose in connection with carrying out the provisions of this section, including the investment and reinvestment in direct obligations of the United States of any portions of the fund which the Secretary of the Treasury, with the approval of the President, may from time to time determine are not currently required for stabilizing the exchange value of the dollar. The proceeds of all sales and investments and all earnings and interest accruing under the operations of this section shall be paid into the fund and shall be available for the purposes of the fund.

(*c*) All the powers conferred by this section shall expire two years after the date of enactment of this Act, unless the President shall sooner declare the existing emergency ended and the operation of the stabilization fund terminated; but the President may extend such period for not more than one additional year after such date by proclamation recognizing the continuance of such emergency.

Section 11. The Secretary of the Treasury is hereby authorized to issue, with the approval of the President, such rules and regulations as the Secretary may deem necessary or proper to carry out the purposes of this Act.

Section 12, Paragraphs (b) (2), of Section 43, Title III, of the Act approved May 12, 1933, (public, numbered 10, 73rd Congress), is amended by adding two new sentences at the end thereof, reading as follows:

"Nor shall the weight of the gold dollar be fixed in any event at more than 60% of its present weight. The powers of the President specified in this paragraph shall be deemed to be separate, distinct, and continuing powers, and may be exercised by him, from time to time, severally or together, whenever and as the expressed objects of this section in his judgment may require; except that such powers shall expire two years after the date of enactment of the Gold Reserve Act of 1934 unless the President shall sooner declare the existing emergency ended, but the President may extend such period for not more than one additional year after such date by proclamation recognising the continuance of such emergency."

Paragraph (2) of subsection (b) of Section 43, Title III, of an Act entitled "An Act to Relieve the Existing National Economic Emergency by Increasing Agricultural Purchasing Power, to Raise Revenue for Extra-ordinary Expenses Incurred by Reason of Such Emergency, to Provide Emergency Relief with Respect to Agricultural Indebtedness, to Provide for the Orderly Liquidation of Joint-Stock Land Banks, and for Other Purposes," approved May 12, 1933, is amended by adding at the end of said paragraph (2) the following:

"The President, in addition to the authority to provide for the unlimited coinage of silver at the ratio so fixed, under such terms and conditions as he may prescribe, is further authorized to cause to be issued and delivered to the tenderer of silver for coinage, silver certificates in lieu of the standard silver dollars to which the tenderer would be entitled and in an amount in dollars equal to the number of coined standard silver dollars that the tenderer of such silver for coinage would receive in standard silver dollars.

"The President is further authorized to issue silver certificates in such denominations as he may prescribe against any silver bullion, silver, or standard silver dollars in the Treasury not then held for redemption of any outstanding silver certificates, and to coin standard silver dollars or subsidiary currency for the redemption of such silver certificates.

The President is authorized, in his discretion, to prescribe different terms and conditions, and to make different charges, or to collect different seigniorage, for the coinage of silver of foreign production than for the coinage of silver produced in the United States or its dependencies. The silver certificates herein referred to shall be issued, delivered and circulated substantially in conformity with the law now governing existing silver certificates, except as may herein be expressly provided to the contrary, and shall have and possess all of the privileges and the legal-tender characteristics of existing silver certificates now in the Treasury of the United States, or in circulation.

"The President is authorized, in addition to other powers, to reduce the weight of the standard silver dollar in the same percentage that he reduces the weight of the gold dollar.

"The President is further authorized to reduce and fix the weight of subsidiary coins so as to maintain the parity of such coins with the standard silver dollar and with the gold dollar."

Section 13. All actions, regulations, rules, orders and proclamations heretofore taken, promulgated, made or issued by the President of the United States or the Secretary of the Treasury, under the Act of March 9, 1933, or under Section 43 or Section 45 of Title III of the Act of May 12, 1933, are hereby approved, ratified, and confirmed.

Section 14 (*a*). The Second Liberty Bond Act, as amended, is further amended as follows:

(1) By adding at the end of Section I (U.S.C., Title 31, Section 752; Supp. VII, Title 31, Section 752), a new paragraph as follows:

(*To be Continued*).

OLYMPUS

(From Our Correspondent)

New Delhi, February 28.

Unlike distance, Time lends no enchantment to the view. If I had had to write this yesterday, fresh from listening to Sir George Schuster, you might have had one paean of praise to the Finance Member and his handiwork, the new Budget. For I confess I was swept off my feet by Sir George's persuasive eloquence. And so were the Members of the Legislature. But, as I have hinted at the outset, a day has made all the difference; and the spell is broken!

* * *

The first impressions given by the Members of the Assembly are being rapidly modified. It is a courageous budget. Everyone admits. It is a sound budget. That, too, is conceded. But is it fair to the country?

Year after year Sir (then Mr.) Shanmukham Chetty and Mr. Jamnadas Mehta pleaded that the Debt Redemption provision meant "raiding country's revenue" but Sir Basil Blackett would not listen; nor would Sir George Schuster. Now the same Finance Member argues the other way and sees nothing wrong in using the provision for revenue purposes. He even goes to the extent of giving it retrospective effect!

* * *

There are two views on the subject. There are those who would welcome it as a step in the right direction and there are those who feel that this provision should have been kept in reserve for a future contingency of a graver nature. Even the former are not satisfied, because Sir George Schuster does not make the change permanent. He throws the onus on the future Federal Minister to take the Viceroy's sanction before he can do what Sir George Schuster is doing! If it is a genuine change, why not change the rules as well?

* * *

Sugar excise is considered as an act of partial injustice. Because it is too rigorous. With minimum price for cane fixed by law, protection lowered by a partial countervailing excise, the industry may well find itself in difficulty, and only the exceptionally efficient have a chance of survival.

* * *

The case of match excise is still worse. This was a source of revenue meant for the future Federal Government to draw upon. In fact, it was understood in London that new excises should remain untapped by the present Government. And now two of the cards, which the future federal government could play, have been played, and trumped.

* * *

There is bitterness at the grant of Rs. 170 lakhs to Bengal. "This is too generous," say all non-Bengal members. Even the Bengal members are not very enthusiastic. "It means that the Bengal Government has got a charter to overspend its resources on its so-called fight against terrorism."

* * *

Postal changes. Only two years ago the Government spokesman argued that the change to one anna for half-tola letters is administratively impossible. Once again, the Government have taken a leaf out of the book of the Opposition, without acknowledgment! Only in respect of telegrams Government have shown imagination. Traffic will certainly be stimulated and business firms would benefit the most.

* * *

This year Sir George Schuster altered the usual arrangement of his budget oration. He skipped over the 1933-34 figures. Perhaps to camouflage the huge deficit and get cheers for Rs. 129 lakhs for the Bihar Earthquake Relief Fund.

His economic survey had a good hearing. It was excellently argued. But Government appropriate credit for developments which had occurred without any plan.

* * *

Agricultural interests were humoured by a promise of any other conference with the provincial governments. But the real point was that India should make up permanently with Britain, sell her produce to Britain and buy British manufacture. That was the keynote of the speech.

* * * *

The U. P. Members cheered while the Madras group were annoyed on hearing that the export duty on raw hides would be removed. I am sure there will be a tug-of-war on this question in the Assembly.

The budget scheme is based on heavy taxation. This, I forecasted last week; and the sources tapped for the purpose too bear out the speculation that has been going on for some time in the various markets of India.

* * * *

The General Debate on the budget that starts on Friday does not worry Sir George Schuster. If he could go out riding even on the morning he was to present his budget and feel happy that he had done his best, nothing would disturb Sir George in the coming fortnight. A first rate debater himself, he has the confidence born of the knowledge that there is none in the Assembly who can corner him.

One thing must be admitted. The Finance Member leaves behind him a record of hard work and skilful execution of a plan which his last budget has now completed. Sir Basil Blackett, too, left India with the load of Provincial Contribution and Cotton Excise Duty off his breast. Sir George has certainly restored equilibrium to the finances of the Central Government.

* * *

That he has done it by a policy of all taxes and no retrenchment is a legitimate grievance of the country. But the worst victim of Sir George's crude expedients is yet to come on the scene. Should another emergency arise, Sir Percy Grigg will be hard put to it to find a pice of new taxation to add to the general revenues. So thorough has been his predecessor.

SOUTH INDIA

(From Our Correspondent)

Madras, February 28.

The debate on the budget in the local Council proceeded throughout on a low level of reiteration of questions that had been raised on more than one occasion in the past. It is only to be expected that in the general discussion of a provincial budget members should attempt to air their major grievances. But it should be considered disappointing that even on such questions as land revenue remission, which lend themselves to effective speaking, none of the Councillors was impressive.

But both Sir Archibald Campbell and Sir Hopetoun Stokes were so completely unconvincing in their replies to the general debate. Though the Finance Member claimed at the end of his speech that he had made an effect on the "more reflective members" of the Council, he has done little more than emphasise the value he has always attached to the maintenance of the balances. Whether at a period like this it would not be wise and justifiable to allow these balances to be wiped out even at the risk of a small deficit for the immensely important advantage of affording relief to the agricultural classes is a question which ought to have been posed as such by the Finance Member and examined at some length without any preconceived ideas.

It is, indeed, a pity that during the long course of the discussion on the budget no one should have presented the issue before the House in this light. If such an attempt were made, it is certain that the Finance Member could not have laughed it out as an amateurish suggestion springing from an inordinate desire to serve the interests of the agriculturists and to improve one's chances at the polls at the next election. For it will be remembered that it was no less a person than Mr. Keynes who first broached the idea in Great Britain of the British Government voluntarily courting an unbalanced budget in order that British industry might have the advantage of a relief from the crushing burden of taxation and the opportunity to recoup its strength. Whether or not the members felt that a poser in this wise would smack too heterodox for the digestion for the general rank and file of the council is not clear. The result, however, is that the debate on this question was carried on in the old grooves and Sir Archibald Campbell and Sir Hopetoun Stoke had alike an easy task in answering the debate.

It should be pointed out, however, that, though the spokesmen of the Government were on the whole more effective in their speeches than the other members on either side of the House, they must be said to have approached the whole question from an altogether wrong standpoint. Sir Archibald for instance, laid great stress on the fact that remission is not a complete cure for the effects of the economic depression and that other measures are necessary which might be incompatible with further reduction of taxation.

The obvious retort would be that an inexpert doctor, admittedly incapable of effecting the cure, could at least administer a palliative or a sedative. In its vainest moments the Government cannot flatter themselves that they are capable of effecting the "other measures." These other measures are bound to be delayed for a long time. Sir Archibald conveyed the hint that, while the remission of land revenue to the extent demanded by the Standing Committee would be but a palliative to the ryot, it would at the same time disable the Government for carrying out those measures which will effect a complete cure. As we have no reason to think that all of a sudden the Government of Madras would strike out new paths of increasing public prosperity, it may be presumed that the "other measures" are only increased expenditure in the so-called nation-building departments. It was left to Swami Venkatachalam Chetty to voice the complaint that these same departments had been consistently starved in the past. It would have been prudent and politic of Sir Hopetoun to pass over this but instead he has offered an elaborate and unfortunately too transparent apologia, comparing the percentage increases in expenditure in the last decade in the Reserved and Transferred halves.

It is an old device this, of proving Government's concern for the transfer departments by attempting the mathematical feat of establishing the ratio between zero and a given figure!

The principal moves of our legislators in regard to the budget and the present pre-occupation of land revenue remission would seem however to have been taken outside the House. Mr. Satyamurthy and three other members of the Council have addressed a lengthy communication to their colleagues detailing the tactics that they might profitably follow to force the Government to accede to the popular demand. After referring to the halting arguments of the Government's spokesmen and pointing out the means open to the Council of signifying its disapprobation of the provisions of the budget, Mr. Satyamurthy and his friends attempt to clarify the alternatives, which the popular representatives should show themselves willing to accept as a solution of the conflict between the popular demand for land revenue remission and budgetary requirements. They urge:

> "We earnestly press upon you the absolute and urgent need for you all to act together and make it clear to the Government that you are prepared, so far as you are concerned, as elected and responsible representatives of the people, to face any one of the three alternatives, mentioned below, in order to give the much-needed minimum relief to the Rayatwari Landholders of the Province.
>
> 1. The financing of all capital schemes from the balances.
>
> 2. The reimposition of a salary cut at 10 per cent. and the financing of part of these schemes from the balances.
>
> 3. Further retrenchment in personnel and in services, in addition to other proposals":

It remains to be seen how far our legislators would be prepared to act upon this advice.

The agitation against the amendment to the Madras Estates Land Act which vests occupancy rights in the tenants of Inam lands has during the week reached its climax in a deputation to His Excellency the Governor headed by no less a person than Sir Sivaswamy Iyer. The deputationists had more than an hour's audience with the Governor and presented a lengthy memorandum which has evidently benefitted from Sir Sivaswamy Iyer's powers of expert draftsmanship, cogent reasoning and legal knowledge. It would be difficult to do justice to this weighty document in this necessarily brief reference. The signatories, who are drawn from all the important districts of Southern India, have taken the line that the Inamdars are spread over all classes and communities and public and religious institutions; that historically, no right of occupancy ever attached to a tenancy in Inam lines; that earlier legal decisions have consistently emphasised the distinction between Inams and Estates; that in the earlier stages of the Bill there was no intention of effecting such a radical change in property rights; that the amendment was sprung on the Council and the country by a private member; that the conditions preliminary to the passage of legislation of an expropriatory character have not been satisfied; and that on these grounds His Excellency the Governor would be perfectly justified in exercising his power to withhold his assent to the new legislation. That the Inamdars, whose representatives appeared before His Excellency the Governor, have no intention of standing in the way of Government redressing the legitimate grievances of tenants is proved by the fact that they have in effect asked for the institution of a public enquiry into the condition of these tenants.

(From Our Correspondent)

Bombay, February 28.

The coincidence of a live public interest in the question of the diversion of trade from Bombay with the budget session of the local Legislature has been, from the point of view of the Finance Member, somewhat unfortunate. The general discussion on the budget was freely availed of by all sections of the House to bring pointed attention to the havoc which the financial expedients of the Bombay Government have played upon the trade and commerce of this city. And the demand was justly made that such handicaps on Bombay's commercial life should be removed immediately, whatever the cost. And in this, European and Indian commerce stood shoulder to shoulder. Mr. W. G. Lely, the representative of the Bombay Chamber of Commerce, insisted that Government must reexamine all the recommendations of the Reorganisation Committee with a view to effecting further economy in expenditure. He asked for an examination of the position regarding the diversion of trade from Bombay and urged the need for quick action. He was particularly critical about the two forms of provincial taxation to which the commercial community had all along taken the strongest exception. One was the electricity duty and the other the road toll, the latter of which Mr. Lely stigmatised as "the most obnoxious and entirely anti-diluvian form of taxation." He sketched the various factors that tended to divert trade in increasing measure away from Bombay and demanded that, if a beginning was made by the Government by the abolition of the road tolls, the Railways, the Municipal Corporation and the Port Trust would be ready to co-operate in a common effort. The non-official criticism of the budget was so reasonable that even the *Times of India* has felt obliged to lend its support thereto and strengthen the demand for the Government dealing more satisfactorily with the recommendations of the Thomas Committee on reorganisation.

Strangely enough, in his reply to the debate, Sir Ghulam Hussain showed himself petulently intolerant of criticism which is accepted by all sections of public opinion as thoroughly legitimate. He took the extraordinary course of not only claiming credit for the Bombay Government for balancing the budget, but also denying it to Madras and the Central Government, the former on the ground that it is a purely agricultural province and was not affected by the depression to the same extent as an industrial province like Bombay, and the latter on the ground that the budget was balanced solely on the strength of inordinate increase in taxation. Perhaps the worst point that Sir Ghulam made was that commerce contributed little to the revenues of the province and at the same time insisted on getting exemptions from the tolls and the electricity bill.

The remark that commerce contributes little to the revenues of the province is too peurile to call for any answer and should be left at that. But it is gratifying that answer has been ultimately afforded by the action of the Government themselves in convening a conference between the principal commercial bodies of the city, the Municipality, the Port Trust and the representatives of the Government for considering the questions connected with the diversion of trade from Bombay. It is, perhaps, necessary to observe in this context that since the question was first raised in these columns, matters have been moving pretty fast. It is now ascertained that, not only cotton, but even the sugar trade has been seriously affected by the fact that the claim of the candy merchants for a refund of the duty on candy manufactured from raw sugar and despatched to upcountry places is not conceded on the ground that the act does not permit refund on a commodity which undergoes a chemical change before export. It will be seen that foreign candy will enjoy the refund which is conceded to the indigenous product. On this account also Bombay has now only a few sugar candy factories in place of the hundred which it had at one time. Other commodities there are which have been similarly affected. Perhaps the best proof of the dangers which confront Bombay at present is afforded by the fact that at Mumbra increased facilities are being provided for the clearance of cotton by country boats.

A position like this has till recently left the Bombay Government altogether undisturbed. A determined effort is now being made to restore to the city the cotton trade which has been captured by the Kathiawar ports. A conference was held at the Bombay Secretariat on Friday last between the representatives of the Government, the Railways the Port Trust and important commercial bodies under the presidency of His Excellency The Governor. The commercial interests naturally urged the abolition of the town duty, while the Railways and the Port Trust offered to reduce their freight and handling charges to a point at which Bombay could meet the competition of Kathiawar. No definite decision has yet been reached at the Conference. As regards the abolition of the Town duty, the position is definitely more complex; because the Municipal Corporation enjoys the greater part of the income derived from this source; and lately the Government of India has disallowed a proposal of the Corporation to impose a terminal tax on passengers. The Corporation is, therefore, unable to come to a decision on this matter.

The strike situation in Sholapur has assumed during the last few days an increasingly threatening aspect. It is difficult to ascertain the details of any industrial dispute at a time of raging hostilities. But it is generally believed that the strike has been fomented by people who have actively misrepresented the recent cut in wages as affecting the dear food allowance which the mills have been giving to the employees for over a long period. Mr. R. R. Bakhale tried to move an adjournment of the House for discussing the issues connected with the Sholapur strike; but the Government contended that the matter was not of such an urgent necessity, the Sholapur strikes having begun much earlier than the meeting of the Council. For lack of the requisite number of votes Mr. Bakhale was unable to move the adjournment motion. The Finance Member, however, announced that the Government have decided to conduct a departmental enquiry into the working of the cotton textile industry since January 1st, 1926, with particular reference to the reduction of wages, rationalisation of industry and the state of unemployment prevailing in the different industrial centres of the Presidency. It will be seen that the proposed enquiry has the widest scope; and the terms of reference have been so framed that the findings of the committee will be directly useful in settling wage disputes as they arise. There is also reason to think that the material gathered in the enquiry will be helpful in solving other problems of internal reconstruction with which the cotton industry, particularly in Bombay is now faced. Above all, the announcement of the Bombay Government must be welcomed as a recognition that an industrial dispute must be settled not with a big stick nor unthinking leniency but on the basis of complete knowledge of relevant facts. It is to be hoped that such an enquiry would afford the means of avoiding all industrial disputes for some length of time, during which the Bombay mills will have an invaluable opportunity of putting their houses in order.

GREAT BRITAIN

Railway Wage Machinery: Insurance Corruption Scandal: The Tariff War with France: Cotton talks will Japan: F. B. I. and Trade Policy.

Railway Wage Machinery:

The attempt to establish a Railway Staff National Tribunal has failed. Since the establishment of the Central Board and the National Board by the Railways Act of 1921, disputes between the Companies and the Staff were brought before the former and, in cases of failure to arrive at an agreement, before the latter for arbitration. In point of time, therefore, the National Board was a later court of appeal and should have been a final one, if its findings could be made compulsory and binding. But the trade unions, jealous of their ultimate right of free collective bargaining, refused to accept compulsory arbitration from any board, national or international. Things were brought to a head when, a year ago, the railway companies brought a wages reduction scheme before the National Board. The Unions joined the deliberations by declaring that they would not accept any adverse findings as binding. This was a blow to the prestige of the Board which, not being a pretentious and determined institution like the League of Nations, could not survive it.

It was then proposed that the two Boards should be replaced by a Railway Staff National Council and a Railway Staff National Tribunal. The Council would consist of an equal number of representatives from the Companies and the Unions. But the Tribunal would have a personnel of three—two chosen from two panels nominated by the companies and the unions, and one Chairman appointed by agreement, all three unconnected with the railway service. It was proposed that the Council would have final authority in deciding minor issues and that the decision of the Tribunal would be binding in all matters. The Unions, as already mentioned, refuse to submit to compulsory arbitration in major disputes over hours and wages.

It would be pertinent to ask the Railway Authorities, whether it is not a greater evil to increase the risk of strikes and stoppages by attempting to establish a theoretically paramount board of Arbitration than carry on with a machinery which, while accepting the ultimate right of the workers to free bargaining, would serve for all practical purposes as a tribunal. Such a machinery has been found workable for over a decade.

The Insurance Corruption Scandal:

Time was when Englishmen enjoyed a reputation for honesty and noncorruptibility which was thrown into the eyes of other nations which were discovered with a few black sheep in their flocks. Whenever a Kreuger was caught or a Stavisky the inevitable contrast was drawn between the shiftiness and undependability of other nations and the high sense of honour and honesty on which England's supremacy in the financial world was built. A Kreuger or a Stavisky in England was considered as unlikely as orchids on the snow-clad slopes of the Everest peak.

From this high state of national integrity England was pulled down several degrees by the activities of Bottomley. And now the trial and imprisonment of Leopold Harris followed by the startling revelations regarding Capt. Miles and his incarceration will have rudely shaken the confidence and the sense of security of the British public. If Captain Miles, so popular, with such a distinguished record of war-service, and in such an important position, the people will say, is not above corruption and bribery, there must be something vitally rotten in England's public life to-day.

The story of Leopold Harris and how he practised for a number of years a sequence of arson and fraud on insurance companies is old to-day. But what is not quite so old and is of much greater importance is that his practices should be traced through devious windings to sources which one does not usually associate with crime and fraud. That a man in Capt. Miles's position should be an active participator in shady and underhand schemes of gain and should escape detection till exposed by a confederate argues a lack of supervision and watchfulness on the part of those who have the conduct of public bodies in their hands.

The Tariff War With France

A stickler for prestige often has more difficulties to overcome than are actually present. And now at the early stages of the tariff war with France the problems have resolved themselves into the familiar poser, "Who is to make the first gesture?" The first exchanges, always made when tempers are frayed, are over. France reduced the quota for British imports, England threatened retaliatory measures and actually imposed countervailing duties on certain French goods as from February 13. France, not to remain behindhand in a show of valour, has given three months' notice to disown the trade treaties of 1826 and 1882.

No one, either in England or France, has the faintest doubt that this tariff war, if pushed to any length, will be disastrous to both countries. The consequences of a still further fall in foreign trade for either of the two countries are too alarming to contemplate. The odds are a million to one against England ever recapturing her erstwhile prosperity, if she has to depend on her internal trade alone and if France denounces her most-favoured-nation treatment of England. Unemployment figures will swell to alarming proportions and financial losses will reach ruinous figures. Nor can France afford to take such a rigid stand on what she thinks her legitimate rights at a time when she is beset by so many perils, both national and international.

But Mr. Runciman *will* have his pound of flesh. France has expressed her anxiety for a settlement. So has Mr. Runciman and his colleagues—but, who is to make the first advances?

Custodians of the public weal should remember that when the prosperity and future welfare of an entire nation hang thus on the consequences of their actions, they cannot let petty considerations of prestige and dignity weigh in the balance. Historians may recount how staunch and uncompromising Mr. Runciman was at a critical juncture of the country's commercial development. But will future generations of Englishmen, seeing light in an impoverished England, ever forgive him?

Anglo-Japanese Talks

Negotiations are now proceeding between a delegation from Lancashire headed by Sir Thomas D. Barlow and a delegation from Japan headed by Mr. Okada to explore avenues of naturally profitable trade agreements between the two countries. Mr. Richard Bond, President of the Manchester Chamber of Commerce, speaking at the Chamber's annual General Meeting, gave certain figures and statistics that speak for themselves:

> "Up to 1932 we had lost more trade than Japan had gained by 1,100,000,000 yards in the Indian market. We lost from 1928 to 1932, trade amounting to 943,000,000 yds. In the same period Japan sent to India an increase of 287,000,000 yds. We may assume that, except in so far as Indian consumption declined, the rest of our losses represented gains of the Indian industry.
>
> Elsewhere in the world market, in round figures, we lost the balance of 700,000,000 yds. of trade, while

Air Mail Week

> Japan gained her balance of something over 300,000,000 yds.
>
> In speaking of Japanese competition and comparing our losses with Japanese gains in this way, I recognise I am giving you only half the picture. While it may be true to say that Japan's gains only represent one-third of our losses, it is equally true to point out that they also represent nearly one-third of what we have left.
>
> International trade in cotton goods has shrunk as a whole in a catastrophic degree, and the critical significance of Japanese competition lies in the fact that Japan has progressed so far and so fast, while the rest of the world trade has declined. This is entirely due to Japanese prices, and the gravity of the situation lies not only in a statistical comparison of Japanese gains and British losses, but equally in the way in which Japanese prices have affected the whole position."

No one can deny that Lancashire's trade has suffered almost within a measurable distance of extinction in the last few years. Loss of export trade with India and competition with Japan, where a man receives 2d. and a woman about 1d. per hour, has brought England's cotton industry to a point where only trade agreements with Japan and India, allowing subtantial concessions and receiving definite advantages can save it from complete breakdown. Sir Thomas Barlow is feeling hopeful, trusting perhaps to the way things always have of turning to Britain's favour even at the last moment. But the cotton talks in India have given ample proofs that the Japanese are a people with whom it is difficult to drive a hard bargain. At all events it is a case of Greek meets Greek and the outcome will be eagerly awaited by the whole world.

F. B. I. and Trade Policy

No one can quarrel with the findings of the Federation of British Industries in the statement on commercial policy issued by them. For example, that the "full development of British industry cannot be accomplished without an active export trade" has become apparent, almost axiomatic, in the last few years. It is also very true that this can be achieved either by world-wide action to restore an international system or by specific trade treaties between countries willing to trade on a reciprocal basis. But the procedure suggested by the F. B. I. is of a negative and a defensive kind. It is suggested that the Government should have powers to impose quotas on foreign imports, to regulate foreign exchange, to take retaliatory measures against countries who dump their goods on the British markets or who gain an indirect advantage by currency depreciation or who grant obnoxious export subsidies. If there are treaties curbing any of these powers, they are to be treated as scraps of paper with no virtue in them.

These are powers that should have been ample for a pre-war Tsar in enforcing his commercial policy. They are weapons which point to a desire for re-armament, if one may use the expression, in commercial warfare which give the lie to the specious arguments for world-trade with which the memorandum begins. The size of the penal code of a country is often a measure of the lawlessness of the citizens. And one cannot help fearing that the F. B. I.'s recommendations, if accepted, will usher in a period of tariff warfare and trade squabbles of which one can already see the beginning.

UNITED STATES OF AMERICA

The Air Mail Contract: Unemployment Insurance Schemes: Market Tendencies.

There appears to be no diminution in Mr. Roosevelt's ability of supplying flaming headlines to world's economic and commercial journals. Last week we had to consider the bomb that was raised to be thrown at Wall Street and this week comes the news of the cancellation of Air Mail contracts following on the disclosures brought to light by the Senate Committee.

The Air Mail Contract

Aviation companies, from the time of President Hoover's administration, were granted certain subsidies for carrying air mails. It is not difficult to imagine that these subsidies must have meant the most important factor in their solvency. It is hardly surprising, therefore, that they should make every effort to retain these subsidies. The indefatigable energy of the Senate has now disclosed the fact that these efforts were not always along the straight path and true. The charges are that the subsidies were in many cases excessive, that they enabled the companies to pay large salaries to their officials and that corrupt methods were used to obtain them. Mr. Roosevelt, with his characteristic suddenness, has summarily cancelled all the Air Mail contracts and arranged for the carriage of mails by army aeroplanes. Mr. MacCracken, who was Under-Secretary for Commerce during Mr. Hoover's administration has also been arrested.

There is something very laudable in Mr. Roosevelt's endeavours to purge America of evil traditions and customs that have come to be associated with her name and thus help in the birth of a clean and honest nation. His methods may be startling or even peremptory, the results he has achieved may not be commensurate with the hope with which he started. But no one can deny that if all the Presidents that preceded him and all that will come after him were inspired with the same ambition of inspiriting purer ideals into America's public life, she would be a model for other nations to copy. But the task is stupendous and even if Mr. Roosevelt's courage is

Air Mail Week

unfailing, racketeering instincts, specially grown firmer with years of impunity, will probably die hard.

Unemployment Insurance

There is a delightful variety in the innovations and experiments Mr. Roosevelt is trying his hand at. He is reported to have turned towards Ocean Mail subsidies after having dealt with Air Mail. The straight-jacket for Wall Street is already in the making, as reported last week. A similar bill to control the commodity markets and prevent gambling in futures has also been announced. Another interesting bill is before the Senate for the purpose of evolving unemployment insurance schemes.

The Federal Congress is debarred by the constitution from formulating national insurance schemes. This difficulty has been circumvented by the provision for the imposition of a Federal tax on employment and empowering employers to use a portion of these revenues for supporting State unemployment schemes. There is every hope that out of the large variety of schemes submitted by States, a useful and equitable scheme for unemployment insurance would be evolved.

The argument that the present is not perhaps a suitable time for introducing new-fangled insurance schemes is a sign of national procrastination, that has alas! become almost universal. It is true that most nations are at the bottom of a depression to-day. But unless they begin the recovery with new weapons for fighting the next slump—for these things move in cycles—where are the uses of adversity?

Market

The market, grown apprehensive of the drastic nature of the steps Mr. Roosevelt has been taking in enforcing his reorganisation policy, showed signs of weakness earlier in the week but rallied considerably towards the end.

Aircraft shares were naturally under special pressure. In the commodity market wheat, oats and barley and linseed recorded slight falls but otherwise the market was steady.

The fact that the new Treasury $800,000,000 issue has been over-subscribed four times has helped to improve the tone of the market.

Despite the gold position, sterling rose sharply against dollars toward the end of the week and francs also appreciated slightly. The demand for sterling was due, it was reported, to the movement of gold from England and France.

The 'gold rush' still continues apace. The 'Majestic' alone carried nearly £6,000,000 of the metal which is a record for a single ship. 'Paris' carried $45,000,000 and the "Europe" nearly $55,000,000. These gold movements are delaying the adjustment of the Franc and Sterling to their new dollar parities but signs are not wanting that they will eventually do so.

Detroit reports a distinct increase in activity in the automobile industry. Ford production is 3000 cars a day. There was an increase of 21 per cent. in employment which is the best since June 1931. And as the motor car industry influences other industries such as cotton, tin, copper, timber, steel oil, glass, leather, rubber and iron, the industrial outlook in America is certainly brightening up.

A humourous correspondent of the *Economist* includes amongst other industries which benefit from the automobile industry, pharmaceutical firms and drug stores, not to speak of hospitals and medicos, thanks to the heavy yearly toll taken in lives and bodily damage. Let us hope any improvement in the industry will not be followed by a boom in the latter!

FRANCE

The Anglo-Franch Trade Tangle

The Doumergue Ministry, having established itself firmly at the helm of affairs, has proceeded to transact business. The lead given by the Daladier Ministry to constitute a Parliamentary commisson to enquire into the Stavisky scandal has been followed up; and at its first meeting the new government decided to appoint a commission with judiciary powers. More pressing than even the Stavisky affair is the trade position of the country as the quota negotiations that were being carried on between England and France are not having smooth sailing. The revised schedule of commodities on which France has decided to restore the quotas to their 1933 level has been carefully scrutinised by the British Board of Trade who have expressed grave dissatisfaction at the inadequacy of the concessions granted. Mr. Walter Runciman, the President of the Board, have sent in his ultimatum threatening reprisals if the position is not revised. The ten day interval given therein is due to expire on the 17th February but the Daladier Ministry, which received this ultimatum, was too pre-occupied with the stability of its administration to devote any attention to this subject. Mr. Runciman's original demand was two-fold—one asked for immediate satisfaction of the quota dispute and the other raised the question of the administration of the quota and License system in France. This has undoubtedly fallen into disrepute and a cleansing of the machinery involved has become imperative. The matter has been taken up by the

new Ministry which has examined the situation closely.

Further concessions in tht import quotas are inconceivable considering the French financial position. The adverse balance of payments has only been concealed in the past years by the fact that France has been the main refuge for gold. From 1931 to 1933 she had a trade deficit of 20,000 million francs but had received only 30 million francs of foreign gold. With the exodus of gold to America which had started after Roosevelt has started his gold purchases, it is possible that the balance of payments will be seriously affected leading to increasing difficulties to her position as a gold standard country if these trade deficits are not corrected. This, France has sought to achieve by restricting imports through quotas She aimed at the promotion of her exports by negotiations on the basis of 'favours for favours received'. To avoid, as far as possible, difficulties regarding treaty agreements, she wanted to gain her ends by negotiations instead of by tariff barriers. When she, therefore, sent her reply to Runciman's ultimatum in the negative, the British Board of Trade followed up its threat with action. Retaliatory duties have been levied on a wide list of commodities imported from France and the note containing the intimation has also been handed over to the new Ministry.

From the reports that are available it appears that the French Government is likely to take an attitude of stern resistance on this occasion. The possibility of reprisals was hinted at in the official *communique* which declared that there was consideration of measures to be taken by the Government in reply to the establishment of discriminatory taxation on French imports. It is also stated that, after recalling once again the principles of the French quota policy, the Note will inform the British government that already the quotas have been restored to 75 per cent. on a wide list of goods and will point out that these concessions have not met with any response from the British Board of Trade. It is also understood that the Note will request re-opening of the negotiations with a view to the conclusion of the new Franco-British treaty, failing which France would retaliate.

Meanwhile, commercial circles in France have become alarmed at the new duties. An official at the Ministry of Commerce said that the duties would be ruinous to the Paris luxury trades. The silk manufacturers of Lyons are expressing grave concern over the increase in the British duty on silk. Vigorous action is being urged on the Government by the Lyons Chamber of Commerce with a view to obtaining the abolition of the new increase.

Deliberations being over, France has taken the first decisive step by denouncing two Anglo-Franch trade treaties. These are the 1826 Navigation Treaty and the 1882 Commercial Convention which regulated the commercial relationship between the two countries and provided for most-favoured nation treatment. The denunciation was handed over to the Foreign Office a few hours before the 20 per cent. duties come into force. These treaties will expire in three months' time which is the period of notice required before termination and the Quai d'Orsay, making this announcement, observes that the denunciation of the treaties is only to show the spirit of resistence and determination to maintain its New commercial policy. Nevertheless the French government is reported to have indicated in the Note that it is anxious to settle all outstanding differences by renewing its offer to open negotiations forthwith.

It remains to be seen whether Mr. Runciman will take this opportunity to improve a situation which has been brought to a state of economic war. While the Board of Trade may feel justified in find-

THE WOLSELEY NINE

The ARISTOCRAT In The 9 H.P. CLASS

This new model, which marks the return of the Wolseley company into the four cylinder field, is not merely a newcomer into an already crowded market. It is a genuine and successful effort on the part of a firm, world-famous as creators of cars of quality, to produce a 9 h.p. car of high performance, fine appearance and absolute reliability. Careful study of its details will show the soundness of its claim to be the real aristocrat of the 9 h.p. class. "Forward mounting" of the engine, and the clever use of the high proportion of body space, has resulted in a car unrivalled in its smart appearance, which accommodates four full-sized adults in perfect comfort. We shall be pleased to forward specifications and arrange demonstrations.

ing out all venues of outlet for English goods and fight tooth and nail to secure as large concessions as possible for its goods in the foreign markets, it seems to forget for the moment the reciprocal obligation to concede similar concession to foreign commodities in its country. Apart from doing considerable harm to the trade of the countries and to the friendly relationship hitherto existing between them, this attitude of warfare does not look like aiding local industries in their career of expansion. This consequence of economic warfare would assume far more serious proportions if it is remembered that it is not possible to make nor would any nation recognise hard and fast distinction between economic and political warfare. It would be necessary before long to court the assistance of France in connection with disarmament ; and to do so while prosenting economic warfare would, indeed, be manifestly undiplomatic.

GERMANY

NEW STANDSTILL AGREEMENT

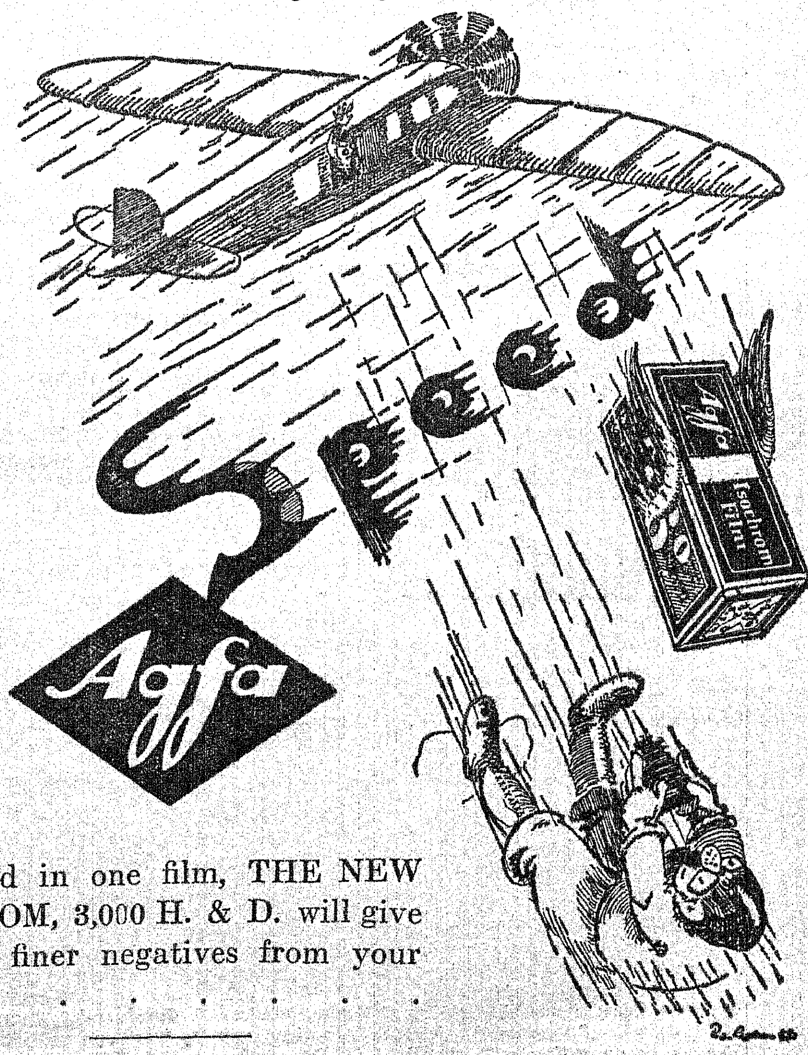
More details are now available regarding the conclusions reached at the Standstill Conference. Mr. F. C. Tiarks, a Director of the Bank of England, who presided over the Conference, announces that the old agreement which is due to expire on the 28th February, has been extended for a period of one more year. As already indicated in the preliminary stages of the discussions, there has not been much of material alteration in the terms of the Agreement. The few amendments that have been made are more in the nature of explanatory comments with a view to clarify ideas than alterations in the fundamentals. The total volume of credit covered by the new Agreement amounts at the current rates of exchange, to about Rm. 2,600 millions of which Rm. 270 millions represent 'unavailed of lines'. There will also be an addition of Rm. 40 millions of new credits being the instalments maturing under the old agreement. The net reduction of credits for 1934 as compared with the credits for the previous year is only Rm. 514 millions of which about Rm. 400 millions are in registered marks, a good portion of which has already been utilised for exports, travel and other purposes. These figures may strike us that the reduction in the volume of credit is not considerable and not as anticipated in the standstill agreements for the year 1932 and 1933. This is only because the representatives of the foreign creditors who met in Berlin showed full understanding that it was necessary for Germany that she should retain a free volume of credit in view of the revival of economy and also to finance

Adventures of Mr. Speedy No. 3.

WE do not advise this method of taking snapshots, even with the New Isochrom Film, but if you require perfect negatives on the world's fastest film, you must always specify THE NEW ISOCHROM, 3,000 H. & D. 26° SCHEINER.

The following six points have been incorporated in this perfect film :

Double Speed ; Improved Colour Sensibility ; Complete Anti-halation ; Exceedingly Fine Grain ; Over and Under Exposures Eliminated ; Five Layers.



These six points incorporated in one film, THE NEW DOUBLE SPEED ISOCHROM, 3,000 H. & D. will give you better enjoyment and finer negatives from your camera. . . . .

her exports and imports. Equal understanding was also shown for the German foreign exchange position and for the position in which the foreign creditors outside the Agreement were placed on account of the Transfer Moratorium.

More important among the other clauses in the Agreement is the one relating to the compromise on the question of payments due from the Golddiskontbank before the expiry of this month. The Golddiskontbank payments due on the 1st March amount to Rm. 54 millions. On account of the guarantees given to this is to be aded a sum of Rm. 100 millions-maturing before the 29th Feb. thus bringing the total to Rm. 154 millions. The present conference has agreed to postpone these payments and this must give a certain amount of relief to Germany. The creditors have, however, succeeded in securing some exemptions. The unavailed of loans guaranteed by the Golddiskont bank totalling about Rm. 14 millions can be cancelled if so desired. The debtors have also agreed that the unavailed of lines outside the Golddiskontbank can be cancelled before the 15th April as offseting accumulated instalments. In addition to this the creditors have also secured preferential rights on the payments of the balance of the Golddiskontbank instalments amounting to Rm. 30 millions.

Another improvement of the New Year's Agreement over the old one is with regard to the system of the creation of registered marks for improving standstill credits. This has made it possible to reduce the total volume of credits without the Reichsbank being called upon to release devisen. In the course of last year approximately Rm. 500 millions registered marks have so far been called up ; and in view of the fact that the system has proved its worth both for Germany and the creditors, the total turnover during the current year can be expected to increase.

The Conference as a whole has been a success and a spirit of give and take was distinctly noticeable in the discussions that took place. While the creditors did not insist on a substantial reduction of the credit lines the debtors in their turn have not asked for any further reduction in the interest and commission payments. The feeling of goodwill and mutual understanding which has been the characteristic feature of the Long and Medium-term creditors'

Conference that has concluded recently has dominated the Short-term creditors conference as well ; and with the continuance of this atmosphere the settlement of Germany debt questions will be marked by the absence of much of its recent unpleasantness.

In the meanwhile discontent has come to be expressed by the creditors in foreign lands at the German policy of repatriation of dollar bonds. The purchase of these bonds has of late been done rather heavily, the buyers in many cases disposing of their other securities to obtain these bonds. The creditors have taken objections to this heavy redemption ; and it has been alleged that Germany is utilising her foreign currency resources for this purpose while only partially meeting the debt service. The Ministry of Economics have furnished some interesting figures in this connection. The total amount of bonds repatriated during the two years ended November 1933 was Rm. 781 millions nominal calculated at par of exchange. Of this amount Rm. 348 millions was needed for ordinary amortisation while the balance was mainly reserved for the purpose of future amortisation. It is pointed out that since the beginning of 1933 no foreign currency has been taken from the Reichsbank or from ordinary exports for the repatriation of the bonds. The repurchases have been made almost exclusively by means of the so-called additional exports or from the sale of German-owned foreign securities neither of which, is contended, draws on the stock of devisen. It may even be said that some addition is made thereto. It is even reported that, only by these means can Germany continue her partial sinking fund payments under the transfer moratorium and maintain interest payments at the present rates. It is also maintained that purchases do not result from dumping of goods, as the German authorities, it is stated, examine every export transaction with a view to avoiding unfair competition with foreign industries. Whatever the truth of these statemenst may be, that the Reichsbank stands to gain a substantial amount by the repurchase of these bonds cannot be denied for the average purchase price of the bonds is only about 50 per cent., and it is estimated that the book profits on the total repurchases exceed Rm. 500 millions resulting in the production in the annual debt service by approximately Rm. 70 millions

CZECHOSLOVAKIA

Devaluation and Stabilisation

Experimenting with currency has become a popular game amongst Western Governments. The world has hardly yet got over the shock of President Roosevelt's monetary experiment and now comes the announcement of the Czechoslovakian Government that they have embarked on a currency devaluation scheme. The Czech crown has been devalued by 16.6 per cent.

This action on the part of the Czechoslovakian Government may be traced, to a certain extent, to America's dollar policy and thence, perhaps, to England's abandonment of the Gold Standard. But the exigencies of Czechoslovakia's present financial and monetary situation hardly justify such a bold step being taken, almost overnight.

Czechoslovakia's Central Banking policy is conducted on sound orthodox lines, and a strict control is exercised over foreign loans. No State loan was raised outside the country between 1919 and 1930 and her present gold and foreign currency reserve exceeds her foreign short-term indebtedness and is 38 per cent. of her note issue. The devaluation experiment can hardly, therefore, be termed an emergency measure.

It can be traced rather to Czechoslovakia's unwise 'nationalism' with regard to her foreign trade. When in 1933 her rigid attitude to her imports was followed by an alarming fall in exports, the cry went round that exports should be stimulated by currency devaluation and trade treaties with the Little Entente. The Agrarians opposed the treaties for fear it would mean large agricultural imports and supported the devaluation measure. The Central Bank and the Zivnostenska Banka opposed the currency experiment and the whole board of the Central Bank has now resigned. The devaluation scheme was also opposed by Dr. Benesh's National-Democrats and the German and Czech Socialists. The Government in siding with the Agrarians in this impasse have taken a step which, when we consider that Czecho-Slovakia is a country with the oldest stabilised currency in Central Europe, is precipitate, if not unwise.

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

> "It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

THIRD-PARTY LIABILITIES IN MOTOR INSURANCE

For some time past the subject of motor insurance has been engaging the attention of insurance men and insurance journals in England. Lord Danesfort's Road Traffic Act of 1933 and its amending and auxiliary Acts have been widely discussed and criticised. Motor insurance companies in England are finding that the cost of thirty claims goes ever upwards and continues to take a heavy proportion of the underwriting surplus. Owing to the heavy demand on account of third party claims, some insurance companies find themselves to unable to meet their liabilities in this regards, and try to evade then on I purely technical grounds. During the year 1933 two motor insurance companies, namely North and South Motor Insurance Corporation and the Port of Manchester have failed. It is fortunate that the assurance companies (winding up) Act which came into force recently, enables the Board of Trade to take the initiative in connection with offices which are conducting motor business on unsound and speculative lines.

The preliminary figures as to road accidents, brought to the notice of the Police in 1933, involving in deaths or personal injuries were recently published. The figures reveal that the situation is becoming more and more serious year after year. The total number of accidents recorded during the year 1933 was 191,289 as against 184,006 in 1932 showing an increase of 4.3 per cent. Of these 6,924 accidents were fatal as against 6,487 during the previous year showing an increase of 6.7 per cent. The number of persons killed in 1933 was 7,125 and of persons injured was 216,401, the corresponding figures for the year 1932 being 6,667 and 206,450 respectively. Thus the number of persons killed amounts to an average of 20 persons a day and the number injured to an average of 593 persons a day, as against 18 killed and 566 injured per day in the previous year.

This is, indeed, a very dismal record and the statutory provision to protect the public, against the impecunious owners of motor vehicles to meet their liability to pay compensation for injury or death caused by them to third parties, is not found to be adequate in practice. In some cases, the insurance comapnies themselves are faced with the financial difficulties of meeting a large number of third party claims policy due to many fraudulent claims; while in other cases, the company has refused to pay compensation to third parties on the ground that the policy issued to the insured is invalid owing to concealment or mis-statement of material facts or some technical breach of the legal conditions of the contract. If the owner of the motor vehicle is in a position to pay compensation, the injured third party does not suffer because the owner is primarily liable. If, however, the owner is not in a position to pay and the insurance company refuses to pay, then the injured third party suffers in spite of the provisions of compulsory third party liability insurance under the Road Traffic Act of 1930. First class companies do not usually take advantage of any technical flaw in the conditions of their policies, as a means of avoiding payment of compensation to injured third parties. But there are companies who take a narrow view of their responsibilities to the public under the Road Traffic Act of 1930 and who on flimsy grounds defeat the provisions of the said Act. So until some measures are found for making the provisions of this Act completely effective in practice, the public must continue to suffer.

In this connection, it is interesting to note that a novel policy has recently been devised and issued, to the public by the Lloyd's underwriters, which is designed to remove the existing difficulties in the realisation of third-party claims. The benefits of this new policy is available to any member of the public for a comparatively trifling premium of £1 a year. For this sum any body can insure that, if he or she or any member of his or her family is killed or injured as the result of a motor accident and is unable to recover such compensation for damages and costs as may have been awarded by a court of law, then such compensation not exceeding £10,000 would be made under this insurance. Thus, if both the parties primarily liable to pay damages under the third party claims, do not pay for some reasons or other, then payment can be demanded from the underwriters of this policy. The circumstances, under which the third party may fail to recover the damages awarded by a court of law, are: (1) when some mis-statement or concealment of fact or breach of condition has rendered the owner's policy is void and he himself is without means; (2) when the owner's insurance company is insolvent and he is without means; (3) when the injury was caused by persons driving who are insured, in defiance of law, and who are without means; (4) when the owner has forgotten to renew his policy and he himself is without means.

Under the above circumstances, there can be no denying that this policy will prove to be a very useful one and that this will fill up a gap which is left by the cover provided by the ordinary motor car policy.

BANK OF BARODA,

LIMITED.

Under the patronage of and largely supported by the Government of H. H. the Maharaja Gaekwar of Baroda.

(Registered under the Baroda Companies' Act III of 1897).

Ag. General Manager.

PERSONAL ACCIDENT INSURANCE

The term Accident Insurance is a comprehensive one and includes the following kinds of insurance—Motor, Workmen's Compensation, Personal Accident, Disease and Sickness, Fidelity Guarantee, Burglary, Public Liability and Plate Glass insurances. The most important of these subdivisions is the motor insurance, and it may be said that almost all the business transacted by offices doing accident insurance business is in the motor line. Next in importance comes the branch of Workmen's Compensation and there are many offices in England who have specialised in this line. Almost all other branches of Accident insurance except perhaps Personal Accident and Sickness insurance are being transacted in very small scales compared to the above main lines. Excepting Motor Insurance, Accident insurance in general is not advertised and sold.

Personal Accident insurance covers the risk of any kind of accident fatal or otherwise, to the policyholder upto thhe maximum amount for which the policy is issued. Usually the policy is issued for a year or a fraction thereof ; but it may be renewed year after year or may be taken for longer terms at a time. The premiums are comparatively small, as the contract is one of indemnity only, like a contract of fire insurance. If the policyholder survives the term without suffering any accident, then the premiums paid by him are forfeited. Thus this also differs from life insurance, in as much as nothing is payable definitely, and that the sum assured is not a fixed sum but may vary up to a miximum limit. Schedules of payment of the sums assured and weekly benefits under different contingencies will be incorporated in the policy and on proof of the contingencies that happened to the policyholder, the proper benefit will be allowed to him by the company. The maximum sum assured is payable for death by accident or for certain other total permanent disabilities. For partial disabilities making the policyholder unfit for his routine work, weekly allowances, the amounts of which depend on the sum assured and the premiums payable under the policy, will be granted, so long as the disability lasts and upto a maximum period of 26 or 52 weeks, as the case may be. As a means of providing for the family of the assured, a personal accident policy cannot be compared with a life insurance policy ; but there is no doubt that this it will supplement it.

The Personal Accident policy is issued in 3 different kinds namely Accidents only policy, Accidents and specified diseases policy and Accidents and all sickness policy. The premium for the first one is the lowest and that for the last one is the highest as the benefits conferred are much more in the last one. In the accidents only policy, compensation awarded is confined to death or incapacity following accidents. This kind of policy is useful to the small master man who will not be taken as a workman to receive benefits under the workmen's compensation Acts or the national Health Insurance scheme. Such a small master can also cover his life against accidents by paying a reasonably small premium to an Accidents only policy on his life. Accidents and specified diseases policy is an improvement on the above policy, as this provides compensation for incapacities due to the specified diseases in addition. Additional attractions of this policy are tha it provides payment of double the sum assured if the accident happens in a train, tramcar, omnibus or any other licensed vehicle plying for public hire and in which the insured is travelling as a passenger ; and the introduction of benefits of an annuity for permanent blindness by disease or for paralysis. This policy is taken by those who cannot afford the larger premium outlay necessary for an all sickness policy. The most satisfactory policy is the accidents and all sickness contract for which premiums are comparatively higher. All the above benefits are included and besides the main interest centres in the provision of weekly compensation for any illness which the insured may contract upto a maximum period of 26 to 52 weeks. No claim can be made within three weeks of the illness so that the presence of fraud may be detected. In all these 3 kinds of accident and disease policies, the weekly compensations extend either for 26 weeks or for 52 weeks, the premiums in the latter case being greater and the compensation for partial disabilities either one-third or one fourth of that awarded for total disabilities.

PUBLICATIONS OF THE LEAGUE OF NATIONS

Just out WORLD ECONOMIC SURVEY, 1932-33

348 pages ... ... Price: bound in cloth Rs. 5 8 0

The Survey for 1932-33 begins with a description of the revival of economic activity in the autumn of 1932 after the Lausanne Conference and covers the period up till the close of the first session of the Monetary and Economic Conference at London twelve months later. The story is thus brought up to the end of July 1933.

As in the previous Survey adequate use is made of statistical information regarding prices, production, international trade, public finance, wages, employment, profits, etc. collected from all over the world by the Economic Intelligence Service of the League of Nations. Despite the wealth of material thus made available, the Survey, like its predecessor, is a clear and connected story of recent developments valuable to the specialist for its scope and accuracy, and equally to the layman because of its clarity.

The American banking crisis, the movement towards reduction of hours, the situation regarding international indebtedness, the magnitude of agricultural stocks compared with current production, the decline in international trade, the recent rise in prices and recovery of production, are among the subjects of topical interest surveyed in this volume.

WORLD PRODUCTION AND PRICES, 1925-32

155 pages ... ... Price: Rs. 2 12 0

This volume contains an analysis of the changes in the world output and stocks of raw materials and foodstuffs, in the world's industrial activity and, finally, of price movements and relationships. It includes the index number of world production of raw materials and foodstuffs calculated by the Economic Intelligence Service of the League and international index of industrial production, together with abundant statistical material, *e.g.*, national industrial production indices for some 20 countries, data comparing production of investment and consumers goods, and indices of activity of some 15 important groups of industry in a large number of countries.

The chapter on prices contains an analysis of the movement of wholesale prices in various groups of countries ; comparisons are made between the evolution of gold and sterling prices, raw materials and finished products, international and domestic goods, investment and consumption goods, etc.

The chapters on production cover the years 1925-1932, and, where possible, the first quarter of 1933. The discussion of price movements has, where figures were available, been brought up to May, 1933.

Complete catalogue sent free on application.

THE GOLD STANDARD EXPLAINED

While the time for the general restoration of the gold standard appears remote, public opinion in this country is moving in the direction of our return to gold, and so it may be helpful to describe in brief terms what the gold standard is, and what conditions underlie its successful operation in the future. The following description relates to the pure theory of the gold standard, and does not apply to conditions as they exist in this country to-day.

When a country is on the gold standard, it has passed and undertakes to enforce certain laws. First of all, it enacts that its principal coins, which are legal tender to an unlimited amount, shall contain definite weights of gold of a definite fineness. In England, the sovereign contains by law just over 123¼ grains of standard gold, eleven-twelfths fine, and an ounce troy of standard gold can therefore be coined into 3 429/480 sovereigns. Next, the central bank is bound by law to buy and sell gold at fixed prices corresponding to the gold content of the country's principal coins, and in England, the Bank of England was bound by the Gold Standard Act of 1925 to buy gold offered to it at a minimum price of 77s. 9d. per standard ounce and to sell gold at a maximum price of 77s. 10½d. per standard ounce. Next, if a country is on the full gold standard, so that gold coins circulate freely, the central bank is bound to pay out gold coins on the presentation of any bank-notes issued by it. Alternatively, if the gold bullion standard is in force, the central bank is not bound to redeem its notes in gold coin, but is only bound to sell gold bars of 400 ounces in weight at its statutory selling price. This means in effect that the central bank is only bound to sell gold wholesale (for a gold bar is worth, at 77s. 10½d. per ounce, about £1,560), and is not bound to sell retail. The result is that gold coin does not disappear out of the central bank into internal circulation, but anyone is free to buy gold in large quantities, either for hoarding or for shipment abroad in payment of a foreign debt. In England, however, hoarding has been checked by further legislation empowering the Bank of England to buy compulsorily at its statutory buying price any gold held in excess of £10,000 by a British subject. In order to fulfil its obligations, the central bank of a country on the gold standard is bound by law to maintain a minimum gold cover to its notes and other sight liabilities. Finally, before a country can claim to be on the gold standard, it must impose no restrictions upon the importation and exportation of gold.

These are the legal conditions appertaining to the gold standard, and the abrogation of any one of them involves the suspension of the gold standard. Thus, when England went off the gold standard in September, 1931, the only legal change was the passing of an Act relieving the Bank of England from the necessity to sell gold at a fixed maximum price. This relief was all that was needed to drive us off gold.

The next stage is to describe how the gold standard operates internally and internationally, and it is convenient to begin with its internal operation. To-day, the money in use in a country takes two main forms, bank-notes and bank deposits subject to cheque. Bank-notes are now legal tender without limit, while cheques though not legal tender are in practice used universally for the settlement of all large transactions. The number of notes in existence depends directly upon the amount of gold in the vaults of the central bank. Here, the Bank of England is only allowed to issue notes unbacked by gold up to a limit of £260,000,000, and while it is possible to vary that limit, changes are made very rarely. Abroad, many central banks have to carry a minimum percentage of gold as cover to their notes, so that a direct relation between the note issue and a central bank's gold stocks equally exists.

The size of the aggregate deposits held by a country's banking system, regarded as a single unit, is also dependent upon the size of the central bank's gold stocks, but the connection is much less rigid. Inasmuch as the banking system as a whole maintains a fairly constant ratio between its cash and its deposits, it follows that if bank cash increases, deposits tend to increase as well; and vice versa. Furthermore, bankers always have regard to the amount of cash held by them whenever they make loans, discount bills or buy securities, and so there is equally a connection between the size of bank cash and the extension of bank credit in its various forms.

Now bank cash consists partly of bank-notes held in the banks' tills and partly of the banks' deposits at the central bank. The total size of the commercial bank deposits at the central bank depends upon the extent to which the central bank itself is extending credit, i.e., is making advances or purchasing bills or securities. Finally, the central bank's power to extend credit is governed mainly by the size of its gold stocks. In England, the Bank of England guides its credit policy by the size of its reserve of notes, and this reserve represents the difference between the notes actually issued and the notes held by the public and other banks. If the Bank loses gold it has to retire notes, and if it fails to recover notes from the public or the banks, it has to reduce its reserve. Abroad many central banks are bound to keep a minimum percentage of gold not only against their note circulation but against their sight liabilities which include the deposits of other banks.

The net result is that in theory both the volume of the bank-note issue and the size of bank deposits vary directly with the amount of gold held by the country's central bank, and any change in the gold stocks involves a proportionate change in both bank-notes and deposits—that is in the country's supply of money.

Coming now to the external or international implications of the gold standard, the first thing to notice is the par of exchange between two countries. This can be explained very simply. The sovereign contains a fixed weight of gold, determined by British law; and the franc contains a different weight of gold, determined by French law. It so happens that £1 contains just as much gold as Frs.124.21*, and that is why the par of exchange between England and France is £1-Frs. 124.21. The reason why most pars work out at odd amounts arises from the different weights and measures and from the different finenesses of gold employed in various countries.

Now, suppose that a citizen of one country wishes to pay money to a citizen of a second country. If both countries are on the gold standard he can go to the central bank of his own country and buy gold, paying for it with his own currency. He can then take this gold to the central bank of the second country and make it buy the gold and pay for it in the currency of that country. He can then use that currency to make his payment, because that currency is legal tender in the second country.

Obviously this is a clumsy and expensive method of making international payments and, therefore, resort is only had to it when the rate of exchange moves so far away from parity that it becomes too expensive to remit in the ordinary way. Still, the fact remains that when other methods fail or become too expensive, in the last resort outstanding differences between one country and another are, under the gold standard, settled in gold.

Next, let us consider the case of a sustained unidirectional flow of gold from one country to another. Take first the causes of such a flow. One cause may be an excess of imports. This in turn can only arise from one cause, namely, that foreign goods are cheaper than home goods; and this implies that home prices are above the world level. Another cause of a gold out-flow may be that capital is being exported for investment abroad, and this can only happen because foreign securities are either safer or more profitable. This in turn implies either that home finances are in an unsound condition or that home interest rates are too low.

So much for the causes of a gold out-flow. Now let us consider the consequences. As we have already seen, a loss of gold forces the home banking system to contract credit, to call in its loans, to sell its securities, to raise its interest rates on various kinds of loans, and in general to reduce the total supply of money in proportion to its loss of gold. The result is a general contraction in trade, and a fall of both security and commodity prices. Therefore, home goods become cheaper and home investments become more profitable. Also any drift in the direction of unsound finance is immediately pulled up short.

This means that the weaknesses which were the cause of the gold out-flow are automatically corrected by the consequences of the gold out-flow.

Exactly the converse happens when a country gains gold. The new gold permits the banking system to expand credit, to grant more loans, to reduce its interest rates, to buy more securities and to increase the supply of money. Hence trade expands, and security and commodity prices rise. Thus, home goods become dearer, and so exports decline and imports increase. Home investment becomes less profitable, and there develops a tendency for capital to seek employment abroad. Finally, the easier credit situation offers greater scope for the growth of unsound finance. All these developments combine to check the gold influx and to create conditions conducive to a gold efflux. So once more we see that under the gold standard the causes of a gold influx are automatically corrected. To sum up, the gold standard acts in theory as an automatic regulator of internal and international trade and finance. If a country's internal economic system gets out of line with those of other countries on the gold standard, the operation of the gold standard tends to pull it back again.

---

*Assuming that such a coin existed!

In practice, of course, the gold standard has never been entirely automatic. The banking system of the country never adjusts itself exactly to each individual gain or loss of gold. If gold comes in, credit is not at once extended in exact proportion, nor is credit always contracted at once, if gold goes out. It must be remembered that central banks are only bound to maintain a minimum ratio of gold to currency and credit. There is no legal maximum ratio, and in practice most banking systems operate well above the minimum, so as to keep a margin of safety in hand. It is this that makes the gold standard in practice a managed currency system.

Now, why is it that the gold standard has broken down; and why is it that some people wish to replace it with some new currency system? There are several explanations, and in many respects the gold standard and those operating it are the victims of circumstances rather than the main culprits. When many countries are all operating the gold standard, it is clear that the average level of prices all over the area covered by those countries depends largely on the relation between the total quantity of gold held by all those countries and the total volume of their trade. If there is a shortage of gold, then prices must fall, and as prices fall, so enterprise is discouraged and the volume of trade contracts. Here it is once more possible to discern the corrective function of the gold standard, for the contraction of trade off-sets the shortage of gold, and so permits of a recovery of prices. Still, if there is a serious shortage of gold, a severe fall in prices and contraction of trade may have to take place, and this may impose an intolerable strain on the economic and social systems of the countries involved.

Next, while the gold standard can operate automatically and with a minimum of management, it must have freedom to operate. In particular it needs four conditions for its success. The first is that goods shall be reasonably free to move from one country to another, so that an excess of exports is able to give way to equilibrium or even to a temporary excess of imports. Thus, the gold standard can be defeated by excessive trade restrictions. Secondly, capital must be free to move about the world, so that fluctuations in interest rates can exercise their corrective influence. This requires both legislative freedom for capital movements, and also a willingness on the part of the investor to send his money where it can be employed to the best advantage. Thirdly, there must be an absence of excessive one-way payments, such as the interest and amortisation of large long-term international debts of an unproductive character. The investment of money for the development of a new country does not usually come under this category, for such investment should enable the country to produce and export enough to cover the service of the loan. On the other hand, money borrowed internationally to fill a series of budget deficits, or to finance war or other unproductive expenditure, comes under this category, and the same applies to war indemnity payments, even if those payments are being made to repair war damage in the recipient country. Finally, the operation of the gold standard depends upon a reasonable degree of elasticity in wages and other production costs, so that a sharp fall in prices does not involve the wholesale bankruptcy of producers and a general cessation of production.

Unless these conditions obtain, a flow of gold from one country to another cannot call into being the natural corrective forces. Instead, gold tends to accumulate in inordinate quantities in certain countries. The banking system of such a country at once finds itself upon the horns of a dilemma. If it gives full rein to its huge gold acquisitions, it has to expand credit to an unwieldy, unnecessary and dangerous extent, thereby plunging the country into an orgy of unsound trading and speculation. Conversely, if it does not expand credit in full proportion to its gold acquisitions, it is in effect sterilizing part of its gold. This means firstly that the gold influx is not being allowed to exercise its normal corrective influence, and secondly that the total effective gold supply of the world is being reduced. Gold sterilized in this way might, for all the use it is, be dropped back into the mines from which it came.

Without going into the details of recent history, it is arguable that it was the non-fulfilment of some or all of these conditions that caused the recent general break-down of the gold standard. This implies that there are certain matters to be put right in the world, before the gold standard can be re-established with a reasonable chance of being able to operate successfully.

As regards the future, any forecast is extremely hazardous, and so no definite prediction will be attempted. Still, it may help to indicate exactly what legal stabilization means, whenever the time becomes ripe for it. It is agreed that new pars of exchange will in many cases have to be found, and that international co-operation will be needed to ensure that there is no competition in currency depreciation, and that the new pars place all countries upon as equal terms as possible. The actual method of determining the new pars will consist of the simultaneous passage by various countries of new laws altering the gold content of their respective principal coins. If, for example, the gold content of the sovereign is written down by one-third and that of the dollar by one-half, while that of the franc remains unchanged, then the new pars will be £1=$6.48 and £1=Frs. 82.80. These examples are purely hypothetical and are only quoted to show how in practice the new pars will be reached by the simultaneous revalution of the different currencies in terms of gold.

As regards the internal consequences of revaluation, the first thing to happen will be the automatic appreciation in each country of the central bank's gold stocks. This will yield a profit to the central bank, but it is very possible that all or part of this profit will be taken over by the Government and be used for the repayment of debt, for public works. Still, the central bank will retain the gold at its new and enhanced value, and so a general expansion of currency and credit, in proportion to the appreciation of gold, will be permissable. Thus, prices will tend to rise, and trade will receive a stimulus. The use made by the Government of the profit on the gold appreciation will in the remission of taxation or for the financing of new all probability add a further stimulus to trade. This will happen simultaneously in every country where the revaluation of the currency takes place. Incidentally, the price of gold itself, in terms of currency, will rise above its former legal price when the gold standard was last in force. The devaluation of the pound by one-third would raise the London price of gold from approximately 85s. to approximately 127s. 6d. per fine ounce. This would stimulate gold production and provide an additional insurance against a gold shortage.

As the pound, dollar and franc form the basic triangle in the world's foreign exchange system, it is arguable that the new position of this triangle should be fixed first. Then the rest of the world could link up with these basic currencies. The British Empire and the sterling group should find little difficulty in doing so, and the main difficulty will arise with those countries which are maintaining a nominal gold standard with the aid of drastic exchange restrictions. Here we are getting beyond the scope of this article, but it is legitimate to indicate that in their case the process of linking up will involve the simultaneous devaluation of their currencies, to meet their own requirements and the new values of the pound, dollar and franc; the lowering of tariffs and the removal of exchange restrictions; and perhaps an agreed adjustment of outstanding indebtedness. More than this ought not to be said as to the general outlook for the future, but there is one fundamental fact which perhaps deserves more emphasis than it has yet received. That is that the general re-establishment of the gold standard can be effected in such a way as to promote a legitimate expansion of credit, and need not be a deflationaly act at all. If deflation follows, it is because the attempt is being made to operate the gold standard under conditions dhich do not permit of its success.

Extracts from Directors' Report:

Report—For the year ended 5th October, 1933, showing a profit of Rs. 2,25,137-7-3, including the balance of Rs. 5,659-6-8 brought forward from the last account. The Directors consider the above results to be satisfactory considering the continuous fall in price of cloth during the period under report which necessitated valuation of stock on hand at Market price.

The Directors recommend that the profit earned during the year under review be disposed of as under:—Depreciation Account Rs. 1,81,100, Reserve Fund Rs. 40,000, Carried forward Rs. 4,037-7-3, total Rs. 2,25,137-7-3.

The Profit and Fixed charges have been insured for the current year for Rs. 6,00,000.

The Mills Buildings and Machinery together with stocks of cotton, yarn cloth, waste and stores in hand are insured against Fire for Rs. 46,60,000.—A. Hydari, R. Chenevix Trench, Rais Jung, Ahmed Alladin, Direstors.

TAPTI VALLEY RAILWAY CO., LD.

Extracts from Directors' Report:—

Report—For the year ended 31st December, 1933.

Traffic.—The following table gives a comparison of the traffic figxures, for the past five years:—

	1929.	1930.	1931.
Nnmber of Passengers ...	21,41,933	19,65,677	16,40,036
Gross Earnings (in Rupees)	10,71,849	9,82,549	8,23,897
Merchandise (in Tons) ...	4,12,414	3,99,500	3,68,345
Gross Earnings (in Rupees)	19,26,541	16,89,493	15,39,791

	1932.	1933.*
Number of Passengers ...	16,84,465	16,37,641
Gross Earnings (in Rupees) ...	8,61,708	8,16,152
Merchandise (in Tons) ...	3,36,045	3,86,191
Gross Earnings (in Rupees) ...	14,82,475	16,81,134

*The figures for 1933 will require adjustment as the Audited Returns for November and December have not been received.

The Road Rail Conference, mention regarding which was made in the Directors' Report last year, was held in Simla in April last for the purpose of considering the Report of the Committee appointed by the Government of India to go into the question of Rail and Road coordination in all parts of India. The Chairman of this Company attended the Conference as the Representative of all the Branch Line and Light Railways in India. The Resolution passed at the Conference are receiving the consideration of the Government of India.

At the close of 1932 the sum remaining to the credit of Reserve Fund amounted to Rs. 1,55,517-9-8. During the year under review it has been found necessary to appropriate Rs. 8,700 against Capital Expenditure. The available balance therefore is now Rs. 1,46,817-9-8 and the Directors do not consider it necessary to set aside any further sum on this account this year.

From the Accounts it will be seen that the working of the line for the year under review has resulted in a net profit of Rs. 9,62,408-0-6 to which must be added the sum of Rs. 1,40,935-12-11 brought forward from last year's accounts, making Rs. 11,03,343-13-5 in all.

The Directors declared an ad-interim Dividend at the rate of 7 per cent. per annum, less Income Tax, which absorbed Rs. 4,61,055-0-0 leaving a balance of Rs. 6,42,288-13-5 avalable for distribution, which they propose to apply as follows:—Dividend for the second half-year ended 31st December, 1933, at the rate of 9 per cent. per annum (making 8 per cent. for the year) payable less Income-tax Rs. 5,92,785-0-0, balance to be carried forward Rs. 49,503-13-5, total Rs. 6,42,288-13-5.—E. C. Reid, Ramdas Narandas, Sir Purshotamdas Thakurdas, Dr. S. M. Pagar, F. F. Stileman, Directors.

NIPPED IN THE BUD.

Sir George Schuster's budget for 1934-35, which is his valedictory performance and which was announced on February 27, is calculated to have important—and adverse—effects on Indian industries. There are four industries whose future well-being is affected by the new proposals. They are: the sugar, the match, the cigarette and the tanning industries. The taxes in question are as follows:—

(1) *Sugar*—Excise duty of Rs. 1-5-0 per cwt. and legislation to fix minimum price for sugarcane.

(2) *Match*—Excise duty of Rs. 2-4-0 per gross of boxes on matches made in India. The customs duty is, at the same time, to be raised correspondingly so as to maintain the present level of protection to the industry.

(3) *Cigarette*—Import duty on raw tobacco to be raised and that on manufactured cigarettes to be reduced.

(4) *Tanning*—Removal of the 5 per cent. export duty on hides.

We may, in this connection, consider the difference in the treatment that has been meted out to each of the four industries. The sugar industry has been penalised to the largest extent. The match industry will remain unaffected. So far as the tobacco industry is concerned, it may mean a shift from manufacture in India to manufacture in Britain. The tanning industry is predominantly in the hands of Indians who have been burdened with this handicap in the endeavour, on the part of the Government, to placate the importing interests as voiced in the last session of the Associated Chambers of Commerce.

The words which Sir George used in his last budget in regard to sugar did not justify any burden of this kind within twelve months. Sir George did utter a warning but he led us to hope that any alteration in the protection enjoyed by the sugar industry would be made only after the new mills have had time to accumulate reserves. We are in entire agreement with the proposal to bring in legislation for the securing of a minimum price for the sugarcane growers. This measure should have been adopted long ere this. But the imposition of a double handicap on the sugar manufacturers by increasing the prices of their raw material and by reducing the margin of profit on the sale prices is bound to affect the progress of the sugar industry and to disturb the confidence of investors in sugar shares. If the Government wanted to make up by an excise duty for the loss in customs, they could have, as in the case of matches, levied an excise duty and, at the same time, increased the import duty correspondingly. Why this tenderness to the match industry and this antipathy to the sugar industry?

So far as the cigarette industry is concerned, the principal manufacturing unit is not affected whether cigarettes are to be produced in their Indian factories or their factories in Britain.

The removal of the export duty on hides will mean a great hardship on the large number of tannning factories in South India. This measure has also been adopted for placating the Associated Chambers. The Federated Chambers have stoutly and consistently opposed the demand for the removal of the export duty on hides. There can be no doubt that the Finance Member has listened to the voice of European Commerce and turned a deaf ear to the pleadings of Indian Commerce.

POSSIBILITIES OF SUGAR INDUSTRY IN BENGAL

By M. P. Gandhi.

1. SUGAR-CANE, A SUITABLE ALTERNATIVE CROP

The development of the sugar industry in Bengal has been very niggardly although her soil and climate are exceptionally favourable for the cultivation of this crop. Bengal has always grown a certain amount of sugar-cane and was once a sugar producing province. In point of area under cultivation of cane, Bengal now stands fourth in India, but it is well-known that, in the early years of the twentieth century, Bengal took the second place. This decline in the cultivation of the cane crop in this province has been due largely to the spread of the jute crop in which Bengal enjoys a monopoly in the whole world. The question of the development of the sugar industry has now assumed a great importance as a result of the decline in the demand of jute and the precipitous fall in the price of jute due to excessive production and shrinkage of demand, during the last four years. The necessity of having some other crop in the place of jute crop is exceptionally great at the present moment. If the deterioration in the economic condition of the province is to be arrested, some alternative crop has got to be thought of and sugarcane would seem to answer this purpose best.

2. QUALITY OF CANE AVAILABLE

It is gratifying that the Department of Agriculture in Bengal has introduced a Mauritius variety of cane called 'Yellow Tanna'. This is a very hardy and drought-resting cane, but the juice and gur produced from it leave much to be desired. Its other good qualities and heavy yield led to a great expansion of its cultivation throughout the province. Some ten years ago, the Department of Agriculture introduced new Coimbatore varieties of cane. These were very hardy canes and were heavy yielders with very rich juice. Of these, Co. 213 has proved the best, and is now spreading very rapidly in most parts of the province. It is a matter for satisfaction that experiments are being continually made for finding out a quality of cane even better than Co. 213. The present position is that the area under Coimbatore cane is spreading rapidly, but, so far only in a few localities is there sufficient area under this crop to supply large factories. If the Department of Agriculture take a keener interest in this question, it would not be at all difficult to make still greater improvements in the quality of cane.

The total area under cane was 2,33,000 acres in 1932-33 and 2,57,000 acres in 1933-34. Of this, about one lakh acres are under improved variety and it is satisfactory that the recent crop-cutting experiments indicate that the normal yield of gur which was 37 maunds per acre has now increased to over 50 maunds per acre, due largely to the introduction of the improved varieties of cane by the Agricultural Department. Taking even the lower figure of 37 maunds of gur per acre, the total production of cane gur comes to about 92,50,000 maunds. In addition to this, date-palm juice yields gur estimated at about 27,50,000 maunds, making a total of 1,20,00,000 maunds.

3. BENGAL, SUITABLE FOR CANE CULTIVATION.

Is it not surprising that although there are such large areas under cultivation of cane, and great possibilities of the development of the industry in Bengal, she has only two modern cane-crushing large-sized factories, and she has to remain dependent upon the imports from Java or from other provinces? Bengal is eminently suited for the development of this industry. It is to be hoped that by 1934, she will have at least ten factories of a daily 400 ton cane-crushing capacity. What is lacking is a spirit of enterprise and organised efforts on the part of the people as also the Government. The situation in regard to the jute industry, which is in a deplorable state, and the necessity of restricting the output of jute, if a fall in price is to be averted, have brought to the forefront the question of the cultivation of an alternative crop. Sugar-cane appears to be the best alternative crop suitable for the purpose. His Excellency, Sir Stanley Jackson, Governor of Bengal, also observed in the course of a speech delivered at the Annual Meeting of the Associated Chambers of Commerce in Calcutta on the December 14, 1931 as follows:

> "Large areas in four out of five divisions in Bengal are eminently suited for growing sugar-cane. It is

CALCUTTA — TEL. 6966

reasonable to expect that the rapid adoption of the Bengal Agricultural Department's high-yielding strains of jute must not only limit the expansion of the area under jute but, even in normal times, may bring about a reduction of that area. The Agricultural Department envisages an eventual reduction from this cause by as much as 25 per cent. of the area normally under jute, or about 5,00,000 acres. If even half of the area thus liberated could be put under sugar-cane and if that sugar-cane could be locally converted into gur for transportation to a refinery, we should not need to import a single ton of the 3,25,000 tons which we are now importing annually into Calcutta alone. We have the market, we have suitable land, we have the cane, the hybrid known as Co. 213 from the Government of India breeding nursery at Coimbatore which has been found admirably suited to Bengal, although I am informed that the Agricultural Department is confident of producing an even better cane in the near future."

The possibilities of the establishment of sugar factories in Bengal were discussed by the Tariff Board in their report to the Government of India, and the Annual Reports of the Agricultural Department also show that there are several places where the surplus of canes remaining after fully meeting the demands of gür can feed a large number of factories in Bengal. This being so, what is wanted is only an organised and determined effort on the part of the people to develop the sugar industry in this province. The establishment of a factory for the manufacture of sugar direct from cane will lead the ryots to produce sugar-cane as a profitable substitute for jute and this will be most useful when it is remembered that the ryots in Bengal are faced with a serious crisis owing to the calamitous fall in the price of their chief agricultural crop, and the Government are advising them to restrict the area under jute and utilising the land for other purposes.

4. ESTABLISHMENT OF SMALL 10-TON GUR REFINERIES

The present position in Bengal, let us repeat, is that the area under Coimbatore cane is spreading rapidly, and that, in a few localities, there is sufficient area under this crop to feed large factories, while, in others, the cane areas are scattered in such a way that it is not economic for large factories to draw their supplies regularly. In the meantime, till conditions are suitable for the establishment of large factories, the policy of the Government of Bengal is to advocate the establishment of small ten-ton factories for the manufacture of sugar from gur in order to enable the cultivators to dispose of their cane profitably. The Government of Bengal further observe that this system is suitable for small capitalists and co-operative associations to adopt. This suggestion merits the serious consideration of the people. It must also be observed that the introduction of Co. 213 which is not only rich in purity but also produces heavy outturn, and its extension over the sugar-cane growing areas of Bengal make it possible to manufacture sugar direct from cane on a large scale.

5. ADVANTAGES IN ESTABLISHMENT OF THE INDUSTRY IN BENGAL.

There are several advantages in the development of the sugar industry in Bengal from the point of view of the whole country. Firstly it would be better to distribute the profits of protection over the various provinces, particularly when conditions are favourable, and thus eliminate provincial jealously and rancour. Secondly, the cultivation of the sugarcane crop would give a great relief to the cultivators of jute who are in dire distress. Thirdly, it would be possible to engage the middle-class people of this province suitably in the manufacture of sugar. Fourthly, it will enrich the province as a whole and be of help in utilising the national resources with which the province is endowed. Fifthly, it will provide an excellent avenue for investment of money by small capitalists in this province, without taking any great or undue risk in view of the fact that the industry has been assured of protection by the Government for the next few years.

6. 14 POINTS IN FAVOUR OF BENGAL

(1) Climatic conditions in Bengal are quite favourable for growth of sugar-cane.

(2) The grey-silt areas, too, usually consist of fairly rich soil which makes it possible to produce a heavier yielding crop than any other province.

(3) Irrigation, too, usually an expensive proposition, is generally not required over the major part of the province, as rainfall, both in incidence and amount, is sufficient for the needs of the crop.

(4) It should also be noted that Co. 213 variety of sugar-cane is capable of standing water-logging; in fact it has been found to grow in a foot of water, for one or two months during the monsoon, without any serious deterioration.

(5) The Bengal Government are of opinion that the sugar factories should be more profitable in Bengal than in any other province as the cost of producing cane here is comparatively low (vide "Sugar in Bengal" page 5).

(6) Increase in area near some places makes it possible to establish sugar factories on a large scale.

7) Ryots will also be benefited by the establishment of sugar factories, for while they will undoubtedly still continue to make gur, it would almost certainly be not more than the quantity required for themselves and their immediate neighbours, and their excess cane can thus be sold to factories. They will thus free their bullocks at a time when they require them for land preparation for Kharif crops

and will relieve them from the exacting work of cane-crushing.

(8) The Bhadralog class will find an excellent avenue for employment in large-scale cane-factories, and this will be welcomed at the present time, particularly as their condition is very pitiable.

(9) The development of the cane factories will also be instrumental in preventing the wastage of cane in refining sugar from gur and this will be a national advantage.

(10) The establishment of the cane sugar factories in Bengal will be a blessing in another way, namely, effective competition, which the factories in Bengal will be able to offer to sugar imported from Java or other provinces.

(11) The advantage in freight, which the mills in Bengal will have over the mills in other provinces in supplying the large demands of sugar in Bengal, will be a compensating factor, which would counteract the disadvantage which Bengal may have as compared to other provinces in regard to a higher cost of production (vide Tariff Board's Report) due to the inferior quality of cane, shorter duration of the working season, etc.

(12) The realisation of some price for molasses required for consumption in Bengal will be another compensating factor in favour of mills situated in Bengal.

(13) Another incidental advantage of the establishment of sugar factories in Bengal will be a better distribution of the profits arising from the protected industry in the various provinces and the elimination of any feeling about a disproportionate burden of protection being felt by consuming provinces for the sake of manufacturing provinces.

(14) The efficiency of the Bengali cane-grower is, on the whole, fairly high (vide Indian Sugar Committee's Report, p. 117).

We hope that earnest efforts will be made by the public for starting cane-sugar factories in suitable areas in Bengal in order that more employment may be created for the people; the distress of the cultivators may be remedied to some extent, by the furnishing of an alternative crop to jute, by a higher realisation of price from the cane crop, and in order that improvement may be brought about in economic conditions in the province which has suffered a great deal more than other provinces due to the calamitous fall in prices of primary products during the last five years. The Bengal Jute Enquiry Committee have also observed in their Report (published in February 1934) that Bengal can grow excellent sugar-cane, and that sugar-cane is a suitable alternative crop to jute. It is to the interest of other provinces also to look with favour on the development of this industry in this province, as then alone will it be possible to offer competition with imported sugar at the Port and in the neighbouring areas in Bengal which consume large quantities of sugar, and to do away with the importation of sugar from foreign countries. We hope that the people of the province will seize the opportunity before it is too late, and that the Government of Bengal will spare no pains in carrying on research work for the development of better qualities of cane by carrying out a botanical and chemical survey of the canes now grown; by making trails of superior exotic varieties, by conducting experiments for proper application of manure for each variety of cane grown; and will offer suitable inducements to the people to start large-scale cane-factories on the most modern and uptodate methods.

SUGAR CANE CROP FOR 1933–34

FINAL FORECAST

According to the All-India final Sugar Cane Crop forecast for the season 1933-34 published recently :—

The area sown is estimated at 3,305,000 acres, as against 3,321,000 acres last year. The total yield of raw sugar (*gur*) is estimated at 5,067,000 tons, which surpasses the last year's record yield of 4,684,000 tons by 8 per cent.

The condition of the crop is reported to be good.

The detailed figures for the provinces and States are as follows :—

Provinces and States	Area (1,000 acres)		Yield (1,000 tons)		Yield per acre (lbs.)	
	1933-34	1932-33	1933-34	1932-33	1933-34	1932-33
United Provinces (a)	1,731	1,793	2,786	2,612	3,605	3,263
Punjab . .	467	558	347	444	1,664	1,782

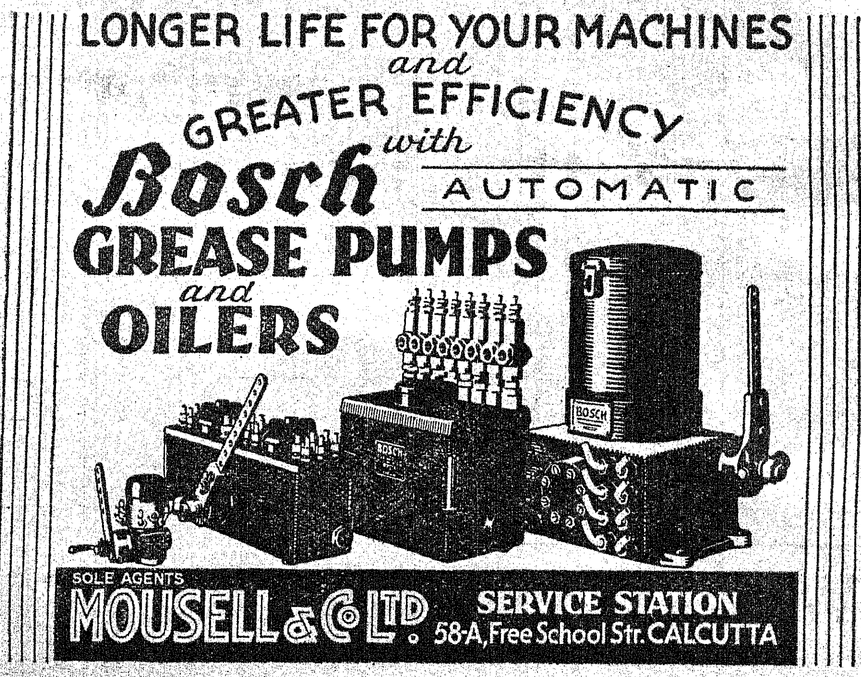
Total .	3,305	3,321	5,067	(c) 4,684	3,434	(c) 3,163

(a) Including Indian States.
(b) Not avilable.
(c) Excluding Bhopal from which report has been received for the first time this year.

In addition to the area for which particulars are given above, the crop is grown on a small scale in certain other tracts in India, the average area of which for the last five years has been some 114,000 acres with an estimated production of 175,000 tons.

The provincial reports are summarised below. The figures in brackets following the name of each province and State indicate the average percentage of sugarcane area in that tract to the total area under sugrcane in India based on the figures for the five years ending 1931-32.

United Provinces (51.8 per cent.)—The area planted is estimated at 1,781,000 acres (21,000 acres being in the Rampur State), as against 1,793,000 acres last year. The yield of raw sugar (*gur*) is estimated at 2,786,000 tons (38,000 tons being in the Rampur State), showing an increase of 7 per cent. as compared with the yield of last year. About 75 per cent of the total area in the British districts is reported to have been planted with the improved varieties of cane which accounted for about 84 per cent of the total production. Owing to showers during the hot weather period, there was no excessive dryness and early indications were good. But the monsoon rains were badly distributed. The rainfall in the first half of October was light, but that in the third week was excessive almost all over the provinces except in Allahabad and the districts of Benares division where it was below normal. The month of November and the first and last weeks of December were practically rainless. But scattered showers were received in the second and third weeks of December and proved bene-



ficial to the crop. The crop is reported to have suffered in its earlier stage from excessive rains, particularly in the Meerut area; but the deficient rains at the later stage improved prospects to some extent. For the province as a whole, the yield is estimated at 80 per cent of the normal, as against 82 per cent last year. The quality of the produce is reported to be ordinary on the whole.

Punjab (14.6 per cent.)—The area is finally reported to be 467,000 acres, showing a decrease of 16 per cent as compared with last year, which is attributed to fall in the price of raw sugar (*gur*). The total outturn is estimated at 347,000 tons, or 22 per cent less than that of last year. Rainfall during July, August and September proved beneficial to the crop except in low-lying areas of a few districts, where it was damaged by floods and excessive rains. 'Top borer' also damaged the crop in parts of three districts. The yield is expected to be below normal to normal.

Bihar and Orissa (9.9 per cent.)—The total area planted is estimated at 418,000 acres, as compared with 302,000 acres last year. The increase in area is attributed partly to favourable weather conditions and partly to the opening of several sugar factories in north and south Bihar. The total yield, as calculated on the new standard adopted this year, is estimated at 623,000 tons, as against 313,000 tons last year. The condition figure for the crop is, according to the district returns, estimated at 90 per cent of the normal, as against the past ten years' average of 95 per cent.

Bengal (7.2 per cent).—The area planted is estimated at 257,000 acres, as against 233,000 acres last year. The yield is estimated at 457,000 tons, as compared with 454,000 tons last year. Harvesting has been carried out under favourable conditions and a satisfactory outturn is expected for the province. The average outturn of the crop for the province works out at 86 per cent. of the normal as against 94 per cent. last year.

The total quantity of *gur* (raw-sugar) likely to be obtained from date-palm juice and other sources is estimated at 100,000 tons, as against 103,000 tons last year. The total quantity of raw sugar in the province from all sources is thus estimated at 557,000 tons, the same as in last year.

Madras (3.6 per cent).—The area planted up to 25th December last is estimated at 120,000 acres, as against 125,000 acres, the corresponding estimate of last year, or a decrease of 4 per cent. The yield is estimated at 325,000 tons, as compared with 346,000 tons at this time last year, or a decrease of 6 per cent. Harvesting has commenced, and the yield is expected to be generally normal in all districts except in Chingleput, South Arcot, the central districts and the south, where it is expected to be below normal. The crop is reported to have been affected by the cyclone in December in Chingleput, South Arcot and Tanjore. The seasonal factor for the Presidency works out at 95 per cent of the average, as against 98 per cent last year.

Bombay (3.3 per cent).—The area is estimated at 102,000 acres (31,000 acres being in the Indian States), as against 105,000 acres last year. The yield is estimated at 266,000 tons (69,000 tons being in the Indian States), which is 3 per cent less than that of last year. In Gujarat, the crop is reported to have done well, on the whole, although it suffered in places owing to untimely rains. In the north Deccan, the crop has been greatly damaged due to cold in January and this may reduce the yield to a great extent. In the south Deccan, harvesting of the *adsali* crop is almost over but owing to the excessive late rains its yield is likely to be somewhat below normal although the ratoon crop, which is being crushed, is expected to return a normal yield. In the Karnatak, the crop

has done fairly well in the Belgaum district, but that in the Bijapur and Dharwar is reported to have suffered to a great extent owing to deficient rains. In the Konkan, the crop has done fairly well in the Kanara district although it suffered in places due to continuous heavy rains. In Sind, the crop suffered in the Nawabshah district owing to frost in the first half of January while that in the Larkana district was affected by an attack of stem-borer.

NORTH-WEST FRONTIER PROVINCE (1.6 per cent).—The area is estimated at 49,000 acres, as compared with 53,000 acres last year. The decrease occurs mainly in the Peshawar district and is due to low prices of *gur*. The yield is approximately estimated at 56,000 tons, as against 45,000 tons last year. The crop suffered from disease in places of the Peshawar district and was damaged by intense cold in the Bannu district. Harvesting has not yet commenced over a large area and accurate yield estimates are not, therefore, possible at present. The yield is, at present expected to be 95 per cent of the normal.

ASSAM (1.2 per cent.)—The area is reported to be 34,000 acres, as compared with 32,000 acres last year. The yield is estimated at 38,000 tons, as against 35,000 tons last year. Weather conditions were generally favourable for the cultivation and growth of the crop in all districts except in Cachar, Darrang and Lakhimpur, where drought and flood caused some damage to the crop in places. The average outturn of the crop for the province is estimated at 94 per cent of the normal, as compared with 90 per cent last year.

CENTRAL PROVINCES AND BERAR (0.8 per cent).—The area planted is estimated at 29,000 acres, as against 28,000 acres last year. The yield, as calculated according to the new normal yield adopted this year, is estimated at 49,000 tons, as compared with 39,000 tons last year. The season was, on the whole, favourable to the crop. For the province as a whole, the yield is estimated at 112.5 per cent of the normal.

DELHI (0.2 per cent).—The area planted is estimated at 3,000 acres, as against 4,000 acres last year: The yield is estimated at 1,000 tons, as compared with 3,000 tons last year.

MYSORE (1.2 per cent).—The area is reported to be 43,000 acres, as against 42,000 acres last year. The yield is estimated at 39,000 tons, which is practically the same as in last year.

HYDERABAD (0.8 per cent).—The area is estimated at 46,000 acres, as against 40,000 acres last year. The yield is estimated at 72,000 tons, as compared with 76,000 tons last year, or a decrease of 5 per cent.

THE FERTILIZATION OF SUGAR CANE SOILS

The manufacturers of Nicifos give the very sensible advice to use available supplies of cattle manure, which brings one to the interesting subject of pen manuring.

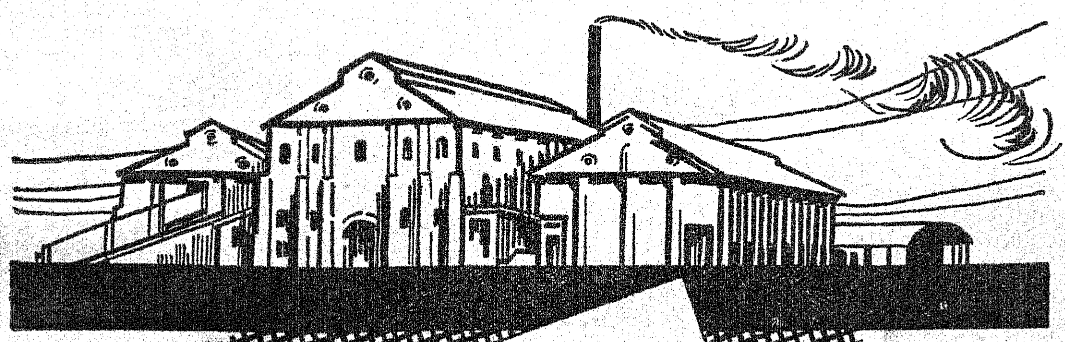
The writer spent a fortnight in Mauritius some years ago and getting tired of admiring the various spots associated with the history of Paul and Virginia; he visited several sugar estates for a change. Now, Mauritius is comparatively small in size. Its area is *720 square miles; about one-seventh the size* of England. It is probably due to this fact that such rigid attention is paid to the permanent fertilisation of the land. Green manuring is carried out systematically and on a very extensive scale. So is pen manuring. The method of preparing this last form of fertiliser being as follows :

Stone basins forty and fifty feet square are used for ripening the manure which is generated from stable refuse. The cattle used for transport are bedded down on litter, mostly cane trash; and this litter is cleared once a week. It is then dumped into the stone basins mentioned above. The mass is watered at intervals with fermented molasses and effluent is pumped back on to the mass, which gradually rots and ripens. All kinds of moisture are added to hasten the process. Distillery refuse and dilute sulphuric acid are in constant use. The manure *is considered ready in twelvemonths. On one estate* visited by the writer the time was shortened, but it is doubtful if the yield was as satisfactory as that of the estates that adopted the twelvemonths policy.

Pen manure is not only economical but it is scientifically accurate in composition, containing, as it does, nitrogen and phosphoric acid.

Deerr in his monumental work on Cane Sugar, which contains everything that is known on the subject, devotes considerable space to pen manuring. He remarks that the general increase in the size of estates and consequent necessity for mechanical traction has forced pen manure into a back seat and its place is being taken by artificial fertilisers. But the fertility of soils in districts such as Barbados and Mauritius over many generations is to be attributed largely to the extensive and well-ordered use of the pen manure manufactured on the estates. The modern tendency is to grow crops with the aid of irrigation and the more concentrated artificial manures, so that it largely becomes a question of the cost of the labour required to make and to apply the pen manure, compared with that required for the purchase and application of artificial manure. It is not yet known what will be the final effect in several generations on the soil of the modern practice.

Of course all the above is very pretty reading. But as far as India is concerned, the old trouble arises, namely that all the cow manure produced is burned. So how are you going to make your pen *manure?* It has been suggested that the Adco process for the preparation of synthetic Farmyard Manure might be employed. The difficulty about



NO UP TO DATE SUGAR FACTORY IS COMPLETE WITHOUT BABCOCK & WILCOX BOILER EQUIPMENT. BRING YOUR STEAM PROBLEMS TO:—

EXCHANGE BUILDING BALLARD ESTATE BOMBAY

this method is the expense of collecting the raw material. Water hyacinth suggests itself as a suitable material for this purpose.

We are indebted to Messrs. Shaw Wallace & Co. for courteously giving information regarding the process for which they are the agents.

Many years of research work at the Rothamsted Experimental Station led to the discovery of the conditions essential for the production of farmyard manure. Investigation showed that ordinary straw contained the bacteria necessary for the formation of manure, and also disclosed the conditions necessary for the full development of these bacteria. Eventually it was found possible to convert not only straw but practically all forms of vegetation into Synthetic Farmyard Manure without the intervention of animals. In order that the results of these researches might be made use of in agriculture, Standard Adco was placed on the market. This substance, a fine powder, when added to moist vegetation promotes the growth of the disintegrating bacteria, which in their turn convert the vegetation into Synthetic Farmyard Manure.

For each ton of straw or other material to be treated allow an area of 4 yards by 4 yards, on this place 2 cwt. of the straw, etc. (this will form a layer about 6-9 inches thick), wet it thoroughly and then sprinkle the Adco uniformly over the surface. (In the case of straw about 16 lbs. of Adco is required for each layer. The next stage to this is wash in the Adco with a further small quantity of water. Another similar layer of the straw, etc., is then placed on the heap, water and Adco added, and the process repeated until the heap is completed. After a few days the heap will heat up owing to bacteriological action and more water must then be added so as to keep the heap moist.

When the vegetable refuse, which is being treated, is still green less Adco and water will be needed than in the case of straw. The following table shows the quantities of Adco and water required for treating various substances.

Quantities of Adco and water required to treat one ton of material.

	Adco	Water
Cereal straw, maize straw, etc.	1½ cwt.	800 gallons.
Dried grasses, mixed refuse ...	1 ,,	600 ,,
Fresh green material ...	½ ,,	400 ,,

N.B.—In all cases the material being treated should be nearly saturated with water. When squeezed in the hand some water should run out.

When the process is completed Adco manure resembles in appearance ordinary Farmyard Manure. If utilised after a minimum period, for instance three months in temperate climates, the manure will be bulkier and not so rich as it would have been had the heap been left undisturbed for a month or two longer. This applies to all forms of vegetable matter, and this fact should be borne in mind when examining the following table which also shows the average composition of Farmyard Manure. It will be noted that the composition of Adco manure depends to some extent on the type of material which is being treated.

The following tests may be given here to show its effect on ordinary crops.

It would be interesting for experiments to be conducted in the field for the benefit of sugar cane growers. On this and all other subjects treated in this Supplement we will welcome correspondence and deal with the subjects to the best of our capacity.

Adco Manure not only closely resembles Farmyard Manure in composition and appearance, but also gives very similar results when tested in the field.

Mangels

The following test was carried out at the Agricultural College Farm, Wye (Kent) in 1923. The season was unfavourable, the average crop for England being 17.3 tons per acre. The soil was of high fertility.

		Crop per acre
1.	Adco with artificials ...	21 tons 0 cwt.
2.	Dung with artificials ...	21 ,, 10 ,,
3.	Artificials alone ...	19 ,, 0 ,,
4.	No Manure	17 ,, 10 ,,

Oats

This test was made at Romney Marsh. It was so arranged that the total plant food was the same in plots 2, 3 and 4. The average crop in England this year was 37.6 bushels of grain per acre.

	Manure per Acre	Crop per Acre Grain	Straw
Plot 1.	15 tons Adco Manure	50 bush.	32 cwt.
Plot 2.	15 tons Adco Manure with artificials ...	54 ,,	51 ,,
Plot 3.	21 tons Bullock Manure	46 ,,	31 ,,
Plot 4.	3 tons 2½ cwt. Chaffed Straw (untreated) with artificials ...	34 ,,	28 ,,

There is a sort of affinity between the method of pen manuring described above and Mr. Albert Howard's scheme for utilising the water *hyacinth* as a fertiliser. This method of making use of the pest which has overrun Bengal is recalled by Mr. Prafulla Bose in a recent letter to the *Statesman;* Naturally enough the supply of raw material is there in plenty. The trouble lies in the fact that it is not practical. The expense of running such a scheme on a scale to cope with the water hyacinth plague would run into millions of pounds sterling. The cost of mechanically pulling out the weeds and the organisation necessary for such a programme would tax the resources not of Bengal only but the whole of India. Take the case of other parts of the world, the Mississippi for example and see the millions of money this same weed costs to keep within limits. We give Mr. Prafulla Bose's letter practically in full. But we must add to what we have said already that the idea was tried out in Burma ten years ago and abandoned on account of the expense involved.

This is the article as it appeared.

In his notes on "The Water-hyacinth and its utilization" Mr. Howard described the following method of composting, to convert the weed into valuable manure for jute and particularly, *for* rice *cultivation* in Bengal. In all his experiments carried out at the Institute of Plant Industry, Indore, Mr. Howard employed only "water weed collected from local rivers." "This was mixed in the fresh condition with earth,cow-dung and wood ashes in the Chinese fashion in a compost heap (where are you *going* to get wood *ashes?*) To begin the heap five cart loads of weed were spread on the ground in the form of a rectangle, eighteen feet by twelve and about nine inches deep. Half a cart load of earth, half a cart load of ordinary farm-yard-manure and two baskets of wood ashes were then spread uniformly on the weed, moistened with water and the whole mixed. A second layer of water weed was added and again mixed with moistened earth, *cow-dung and wood ashes as before.* This procedure was continued till the heap contained from thirty to forty cart loads of the weed. The heap was then lightly covered with earth to prevent excessive drying and left for a month. Active fermentation at once began and the water weed was rapidly broken down into a damp moist mass. At the end of the first month the heap was turned to promote thorough aeration. By the end of the second month the fermentation was completed and the water weed was con-

verted into finely divided organic matter resembling moist leaf mould. This material when added to the soil stimulates growth in a remarkable manner and is proving a valuable manure. There is every reason to believe that the above treatment would produce similar results if applied to the water-hyacinth in Bengal and Burma. The only modification likely to be necessary is to adjust the moisture in the water-hyacinth before compositing so as to prevent water oozing from the heap. If this take place a loss of valuable material would result. This loss could easily be prevented by allowing the weed to wither for a few hours in the sun before being used for the compost. The best time of the year to convert water-hyacinth into Chinese compost would be after the monsoon between October and March when the work could be carried out and a large volume of compost could be prepared for the cold weather crops, for the jute areas, for rice nurseries and for vegetable and fruit gardens."

In an article on Water-hyacinth published in *The Modern Review* of August last I pointed out that "the manurial value of the rotten plants buried under earth and made into a compost is somewhat greater than the ash derived from burning the plant. But so far as the writer is aware no serious and organized effort has yet been made to utilize the weed as manure in any suitable form in the cultivated fields of Bengal for increasing crop-production."

I take this opportunity to appeal to all interested in the Agricultural development of the country to give the above method of compositing, prescribed by Mr. Howard, suitable trial and thereby encourage the ryots to find for themselves the real value of this manure obtained from this 'prenicious weed' water-Hyacinth.

When one begins writing on the subject of fertilisers the vastness of the subject comes as something of a shock. Naturally what we have written barely touches the fringe of the subject. Still it may provide food for thought. NICIFOS which is the main article mentioned is at the present moment the most popular fertiliser in use, among the artificial group. But the whole subject is so complicated. For example, soil analysis in the laboratory is absolutely useless. Only actual experiment in the field is any use at all. So that agriculturists must work out their own salvation to a certain extent. We shall be returning to the subject from time to time as it is naturally of great interest.

Looking through Mukerjee's Handbook of Agriculture which has not been revised for many years, we came across this curious paragraph. (The tests were carried out over thirty years ago).

"The following yields of canes, juice and gur for two plots of Khari sugarcane grown at Sibpur were obtained in 1900-1901; one manured with the refuse of the Cossipore Sugar Factory (i.e. principally bone charcoal) the other manured with ten maunds of castor cake per acre. The crushing of the canes was done in both cases with a two rollered Bepia mill."

	Bone charcoal plot	*Castor cake plot*
Yield of canes per acre	483 mds.	405 mds.
Yield of Juice	59 percent of the weight of canes	56 per cent. of the weight of canes
Yield of Gur	38	31 mds.

Dr. Leather always went nap on oil cake and recommended 300 to 350 lbs. of nitrogen per acre principally in the form of cake.

An earlier article on this topic appeared in the Industries Supplement for December.

INDIAN TARIFF (TEXTILE PROTECTION) AMENDMENT BILL

This Bill was introduced in the Assembly on February 5; and, in view of its importance and the vital interest of the Bombay Mill-Owners Association in this measure, the following extracts from the Association's Memorandum are given:

Duty on, Artificial Silk Yarn: The first important criticism is with reference to the duty, which the Bill seeks to impose on artificial silk yarn. It is urged that the increase in the duty on this type of yarn, which is not at present produced in India, is calculated to injure both the powerloom and the handloom industries of the country. The demand for artificial silk yarn by the handloom weaving industry is evidenced by the importations of this material on a considerable scale during the last few years. Competent authorities have estimated that between 85 and 95 per cent. of artificial silk yarn has been made use of by the handloom industry. The other 5 to 15 per cent. has been used by the power loom industry for the production of decorative effects on cotton piecegoods. The possibilities of the handloom industry and the power loom industry increasing their use of this material under suitable conditions are enormous. The Tariff Board's Report on the Sericulture Industry advocated a duty on artificial silk yarn as an aid to the Silk Weaving Industry of India, but it is pertinent to point out that the handloom silk weaving industry forms a very small proportion of the handloom weaving industry as a whole, and is, moreover, located principally in Indian States outside the direct jurisdiction of the Government of British India. It is not suggested that the Silk Weaving Industry should not be adequately protected; but it should be protected by methods which do not penalise other industries, and a better method of protecting the Silk Weaving Industry would have been to reduce the duty on artificial silk yarn, and to increase considerably the duty on imported artificial silk piecegoods, which are the final products against which the silk and cotton handloom weaving and the Indian power loom weaving industry have to compete. In this connection, it may be remarked that cheap fabrics composed of silk and artificial silk have for a number of years been produced on handlooms in other countries, notably China and Japan, and find a ready sale in India, and that this is a line of advance, which might well be considered by the Silk Weaving Idustry.

The attention of the Government of India is also drawn to the fact that following the publication of the Tariff Board's Report in 1927, the then duty of 15 per cent. on artificial silk yarn was reduced to 7½ per cent. and that the subsequent increases to 18¾ per cent. were imposed purely for revenue purposes. If revenue has been the main consideration influencing Government's decision to raise the duty on artificial silk yarn to 25 per cent., it may be pointed out that the object could be better achieved by imposing a higher scale of duties on artificial silk piecegoods imported from foreign countries. Attention may also be drawn to the inconsistency of imposing an additional duty on art. silk yarn and at the same time reducing the duty on mercerised yarn, which can be produced in this country.

Cotton Yarn: The Bill provides for duties upon a lower scale than those in force at present. The actual proposals made are:—

"158 COTTON TWIST AND YARN, and cotton sewing or darning thread:—

- (i) *of counts above 50s.*:—
  - (a) of British Manufacture Ad Valorem 5%
  - (b) Not of British Manufacture Ad Valorem 6¼%
- (ii) *of counts 50s. and below*:—
  - (a) of British Manufacture Ad Valorem 5% or 1¼ annas per pound whichever is higher.
  - (b) Not of British Manufacture Ad Valorem 6¼% or 1⅞ as. per pound whichever is higher.

Dealing with foreign yarn first, the proposal to retain the duty at the present level of 1⅞ annas per lb. or 6¼% *ad valorem* on counts upto and including 50s. is not calculated to ensure a fair selling price to the Indian mills, or to prevent the further inroads of China and Japan into the Indian market. When the specific duty was first imposed, the object was to discourage the imports of medium counts of yarn firstly from Japan and secondly from China. Unfortunately, when the Tariff Board were framing their report, they had available to them only the

figures for the years upto and including 1931-32. They were led accordingly to observe (page 27 of the report) that the figures indicated the extent to which the specific duty had succeeded in its object. Incidentally, it may be mentioned that even on the figures available to the Board, it was obvious that the importations from China had not only been not checked, but were on the increase.

The imports for the year 1932-33 tell a different tale from what the Tariff Board had unfolded, and constitute a very strong reason for departing from their recommendations. Imports of 31-40s. grey singles jumped to 19.37 million lbs. from a total of 12.77 million lbs. in the previous year, and grey two-folds (all of them practically from Japan and China show an increase from 3.7 million lbs. to 5.4 million lbs. As a matter of fact, in the year in question the importations of these two types of yarns from China and Japan were as much as they were in 1926-27, *i.e.*, before the introduction of a specific duty. In other words, the present specific duty of 1⅞ annas per lb. has not succeeded in checking the imports of Chinese and Japanese yarns.

Coming to the proposals regarding counts over 50s., it is difficult to understand why the arrangement arrived at with the United Kingdom Textile Mission should have been set aside in this one particular. The representatives of the Indian and British Textile interests had agreed that a specific duty of 1¼ annas per lb. on all counts of United Kingdom yarns was necessary. As Government are aware, serious efforts are being made to extend the production of fine counts yarn in this country. Mills are, however, handicapped owing to the existing duty of half an anna per pound on raw cotton which must be imported for the production of finer counts. The entire removal of the specific duty on United Kingdom yarns above 50s. is, therefore, calculated to prevent what has always been considered as a very necessary development.

The increase in the productive capacity of the spinning section of the industry makes it particularly necessary that a portion of it should, at the earliest opportunity, switch over to the production of fine count yarns, and one of the largest manufacturers in this country has already made arrangements to turn over a complete mill producing between 20s. to 30s. yarn to the manufacture of counts 60s. and above. It is, therefore, urged that Government should revise their decision, and impose the duty laid down in the Indo-Lancashire Agreement. It need hardly be pointed out in this connection that the removal of the specific duty on counts above 50s. will enable them to be marketed at prices lower than those of yarns under 50s. to the detriment of the indigenous industry.

At the present time, China and Japan send very little of grey or bleached yarn into this country above 60s. The danger of their switching over to higher counts must not, however, be ignored. It must be remembered that Japan absolutely monopolises the import trade in mercerised yarn in which the counts are rarely below 64s., and often higher than 80s. These yarns are sold in India at prices which are three to four annas lower than the cost of producing similar counts of yarn in the most efficient Indian mills. If counts above 50s. are to carry no specific duty, there is every reason to apprehend a development of the Japanese, and even Chinese, import trade in the direction of the finer counts. There is, thus, a very strong case for the imposition of a high specific duty on counts over 50s.

It has been estimated by one of the leading spinning mills in India that the charge for depreciation alone when producing 60s. and over would amount to 1½ annas per pound. In competition with Japanese spinning mills working double shifts, they are, therefore, at a disadvantage of about ¾ anna per lb. in depreciation charges alone. In addition, Japanese mills have an advantage of about 0.6 anna per pound in their raw cotton costs, an advantage in costs of stores, and a further advantage in wages. The advantage in the cost of labour per pound accruing to Japan would be very much greater than the other two items combined. On page 112 of their Report, the Tariff Board stated that the total cost of labour per pound of 16s. yarn in a Bombay Mill exceeded the cost in a Japanese Mill by over 60 per cent. with exchange at gold parity. At the present rates of exchange, Indian spinning labour costs must, therefore, be at least twice those of Japan. The inadequacy of the duty which has been suggested on counts over 50s. against foreign countries is strikingly borne out by these figures.

My Committee are anxious that the handloom industry should be adequately protected, but they cannot agree that it is in its interests that Indian mills should find it increasingly unprofitable to manufacture yarns for sale, and leave the field more or less completely to foreign countries. The consequent dependence on foreign sources of supply is bound, in the long run, to lead to the handloom industry having to pay higher prices for yarns than it would have to pay if Indian mills were encouraged by an adequate protective duty to keep a share of the trade.

Duties on Cotton Fabrics: It is noted that the definition of "cotton fabrics" has been altered. Under the new definition, it is proposed that a fabric shall be treated as a "cotton fabric" for purposes of assessment if it contains more than 90 per cent. of cotton. In other words a tolerance of

THE BUELL PULVERISED COAL FIRING SYSTEM

British in design—British in manufacture—to use Indian coals at their maximum efficiency

The features of the Buell Pulverised Fuel System which experience has brought out in power generating plants are:—

1. RELIABILITY IN SERVICE

Resulting from the design, materials and workmanship employed, enabling plants to operate over long periods without involuntary stoppage.

2. FLEXIBILITY IN OPERATION

Resulting from the complete control of heat liberation in the furnace, following the ease of adjustment of coal and air supply.

3. MAXIMUM OPERATING EFFICIENCY

Resulting from the close control of air supply and its intimate mixing with the powdered coal—maintained consistently at a commercial degree of fineness.

4. ECONOMY

Resulting from the adaptability of the system to cheaper grades of coal, minimum heat losses from carbon in the ash and excess air.

AVAIL YOURSELF OF NEW IDEAS, AND ENQUIRE FOR FURTHER DETAILS

Write for further data to:

THE BUELL COMBUSTION CO., LTD.

12, MISSION ROW . . . . . . CALCUTTA

MARTIN & CO., AGENTS

10 per cent. is to be allowed. This is far too great a tolerance in the case of artificial silk. It is suggested that the definition of "cotton fabrics" be amended to read:

158C. "Cotton fabrics not otherwise specified containing more than 95 per cent. of cotton."

There can, however, be no objection to a tolerance of 10 per cent. in the case of bordered goods in which artificial silk has only been used for the production of decorative effects in the borders.

Definition of Grey Piecegoods: Coming to the definition of "grey piecegoods," it would appear that the proposed definition will considerably reduce the protection at present afforded to the indigenous industry, since it will prevent the Customs Authorities from levying the specific duty on a wide range of fabrics in the woven coloured category, which previously had to pay the specific duty applicable to "plain grey goods." From this point of view, the new definition is very unsatisfactory, and would let in again certain classes of woven coloured piecegoods from Japan, which the present definition has been instrumental in reducing materially. The restriction of the application of specific duties which the Bill effects is all the less understandable in view of the recommendations of the Tariff Board for an extension of the principle of specific duties to a wider range of goods—a method of protection which the Bombay Millowners' Association has consistently supported in preference to a method of protection by *ad valorem* duties, the effect of which varies considerably, from time to time, with a rise or fall in the cost of raw cotton. There is nothing in the Indo-Japanese Agreement which rules out the possibility of applying specific duties, and it is urged that the system should be adopted in the case of foreign goods of the following classifications at varying rates:

(a) Plain Grey,

(b) Bordered Grey, Dhoties, Saries and Scarves,

(c) Bleached Goods,

(d) Woven coloured, dyed and printed goods.

In view of the Agreement entered into with the United Kingdom Textile Mission, no comments are offered in regard to the rates of duty applicable to United Kingdom goods except to the extent of the criticisms made on the definition of the terms "cotton fabrics" and "plain grey cotton piecegoods."

In regard to the duties made applicable to foreign piecegoods, however, it is strongly urged that the reduction in the rate of duty to 50 per cent. in the case of Japanese piecegoods is unwarranted on a consideration of the prices at which these goods have been selling since the reduction in the duty was effected. This opinion is shared by commercial and industrial organizations throughout the coutry, and the belief is general that the proposed rate of duties will seriously affect the Textile Industry of this country.

Artificial Silk Fabrics: The duty on 100 per cent. artificial silk fabrics of British manufacture has been reduced to 30 per cent. or 2½ annas per square yard whichever is higher. In view of the Agreement made with the United Kingdom Textile Mission, and the fact that the greatest severity of competition in this class of goods has always been from Japan, the new rates of duties so far as they are applicable to goods imported from the United Kingdom may be considered adequate under the present conditions.

In the case of *foreign* artificial silk piecegoods, however, the position is radically different. The duty to-day on 100 per cent. artificial silk piecegoods is 4 annas per square yard, and it is maintained that there is an unanswerable case for an increase in this duty to 6 annas per square yard to meet the protective needs of the handloom weaving industry, the silk weaving industry and the cotton textile industry. In 1933, importations of pure artificial silk piecegoods from Japan fell away to 60 million yards as against 105 million yards in the previous year. On the basis of these figures, it has been argued that the present duty of 4 annas per square yard has proved an effffective check on imports. But this is not the case. The drop in the importations of artificial silk goods from Japan merely correspond to the drop in imports of all classes of goods brought about by the prevailing depression. This is borne out by the sudden drop in the takings of artificial silk yarn by the handloom weaving industry during 1933—7.9 million lbs. as again 12.4 million lbs. in the previous year—which goes to show that that industry found it increasingly difficult to stand against the competition which it has been experiencing from Japanese artificial silk piecegoods. It is also a matter for enquiry whether the reduced figures of imports of Japanese artificial silk piecegoods represented the correct position of affairs; or, whether in other words increased imports through ports in Indian States are not responsible in some measure for the fall in the British Indian figures.

As an indication of the prevailing condition of things, it may be mentioned that the only two silk weaving mills in Bombay have had to be closed down entirely. The inadequacy of the existing duty is also demonstrated by the fact that although the duty on artificial silk piecegoods has been 4 annas per square yard since 1st March 1933, the wholesale market price of 26"/27" Japanese artificial silk taffeta is to-day 4 annas 9 pies against an average of 4 As. 7 pies in 1932, *i.e.*, before the imposition of the minimum specific duty.

Read in conjunction with the increased duties on artificial silk yarn proposed in the Bill, the protection afforded on artificial silk piecegoods will be

actually reduced, despite the fact that Japan's greatest progress during the last few years has been in this particular class of goods, and that future imports of artificial silk goods will remain unrestricted since they have not been included in the piecegoods quota specified in the Indo-Japanese Agreement. A duty of less than six annas per square yard, in the opinion of the Committee, will be entirely inadequate to prevent further inroads from Japan. The potential danger from this country will be apparent if consideration is given to the rate at which her Rayon Industry is expanding. The latest figures available to the Association show that in 1933 the total production of Rayon yarn in Japan was approximately 100 million pounds as compared with about 70 million pounds in 1932 and 50 million pounds in 1931. During the last few years, Japan has superseded the United Kingdom, German and Italy as a producer of artificial silk yarn, and now ranks second, her output being exceeded only by that of the United States of America.

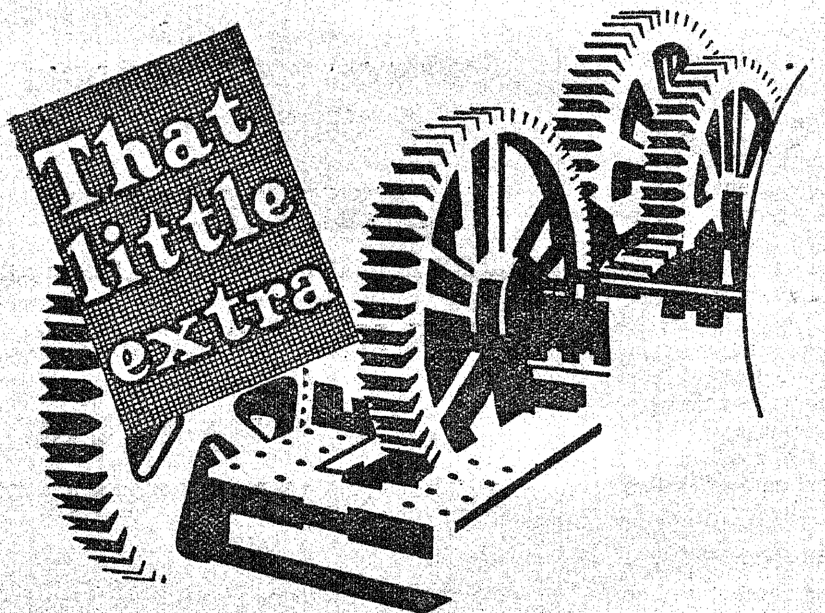
The temporary set-back in artificial silk piecegoods imports from Japan is discounted by this phenomenal expansion, and it is submitted that the rate of duty advocated in the millowners' Association's representation under the Safeguarding of Industries Act, which was supported by the Textile Advisers appointed by Government during the Simla negotiations and by the representatives of the handloom industry, is thoroughly justified by the facts of the case.

Artificial Silk Mixture Fabrics—Of Non-British Manufacture: At the present time, an artificial silk mixture is defined as a fabric composed in part of some other textile than artificial silk in which any portion of either the warp or weft, but not both, is artificial silk. Such fabrics if imported from foreign countries were subject to a duty of 35 per cent. *ad valorem* (recently increased to 50 per cent.) or 2 annas 3 pies per square yard whichever is greater. Under the new definition of artificial silk mixtures, the position has been considerably changed. It is proposed that a mixture cloth containing less than 60 per cent. of artificial silk shall pay a duty of 50 per cent. ad valorem or 3¼ As. per square yard whichever is greater, and a fabric containing more than 60 per cent. artificial silk shall pay duty at the rate of 50 per cent. *ad valorem* or 4 annas per square yard whichever is greater. The latter duty is the same as that made applicable to 100 per cent. artificial silk goods. The new duties are inadequate, judged by the prices at which Japanese artificial silk mixtures have latterly been sold, and it is suggested that they be raised, along with the duty on pure artificial silk goods, to 5 annas per square yard respectively. It is further suggested that, in view of the large class of goods, which would under the old definition have been subject to the full rate of duty aplicable to 100 per cent. artificial silk goods, but will under the new definition only be liable to the intermediate rate of duty, the definition should be modified to provide that goods containing more than 50 per cent. of artificial silk should pay the rate of duty applicable to pure artificial silk goods.

Under the definition given in the Bill, it is provided that the rate of duty applicable to pure artificial silk goods shall only be collected on goods, which contain less than 40 per cent. cotton, that is to say, on all goods which contain 60 per cent. or more of artificial silk.

That a substantial increase in the duty on artificial silk mixtures is warranted is amply demonstrated by the fact that Japan has recently switched over to the production of such goods, and her sendings to India in 1933 were roughly four times what they were in 1931, the bulk of these goods being imported during the last quarter of the year.

A minor change in Item No. 158G—column 2—



Just "that little extra" which makes all the difference between an oil that is merely good, and one that is *better*. Wakefield INDUSTRIAL Oils are in use all over the world which proves their merit. Specify "Wakefield" for the lubrication of your Sugar Mill and economise.

would also be necessary, if the proposals suggested by the Association in regard to the definition of cotton piecegoods, made in an earlier paragraph of this letter, are accepted.

Fents: The change in the definition of Fents is to be welcomed by the Industry. The trade in fents has grown very rapidly, and the new definition ought to provide a salutary check, and ensure that nothing but "bonafide remnants" are imported. The Committee fails to understand, however, why it was considered necessary to reduce the duty to 35 per cent., more especially as the duty had only recently been increased to 50 per cent. The legitimate fent trade should be in a position to bear duties at least as high as those imposed on other classes of cotton piecegoods. The fact that the goods are remnants necessarily implies very low prices, as otherwise they would not be saleable, and it is pointed out that the increased duty on foreign fents would not, therefore, be unreasonable, and would provide additional revenue.

The only other important criticism which it is desired to make on the Bill is with reference to Item No. 158J of the Schedule under which cotton sateens and Italian cloth, cotton velvets and velveteens and cotton fabrics embroidered with cotton or artificial silk, when imported from foreign countries, will only be liable to a duty of 35 per cent. *ad valorem* as against the general rate of 50 per cent. applicable to other types of cotton goods. The inclusion of cotton fabrics embroidered with cotton or artificial silk in a class by itself on which a duty lower than the general duty shall be payable is not unreasonable, since these goods are not produced in this country to any considerable extent, but the inclusion of cotton sateens and Italian cloths and cotton velvets and velveteens is definitely undesirable. The production of saleable cotton sateens is chiefly a matter of finish, and similarly the production of cotton velvets and velveteens presents no insuperable difficulties. They would certainly be new trades in this country, but both are very natural developments, which may be expected to take place. It is desired to point out that, during the last few years, Japan has made very rapid progress as a supplier of both cotton sateens and cotton velveteens as is evidenced from the following figures:—

(In thousands of yards).

Printed Sateens ...	47	156	914
Italian Cloths and Sateens (Dyed) ...	347	537	799
Velvets and Velveteens ...	394	455	2,150

These goods compete either directly or indirectly with some of the better class productions of Indian Mills, and it is, therefore, urged that the duty applicable to them should be raised from 35 to 50 per cent.

These criticisms of the various provisions of the Bill are based on existing conditions, and it is, therefore, desired to point out that in many directions, and notably in respect of the necessity for the imposition of higher duties on foreign yarn and artificial silk piecegoods, the Industry's case will be even stronger if due consideration is given to the fact that, in the near future, a shorter working day will be introduced throughout the Textile Industry in British India. This reduction in the length of the working day will very seriously affect the competitive capacity of British Indian Mills *vis-a-vis* their foreign competitors, who will continue to work the same number of hours per day as they are doing at present.

WORLD OF INDIAN FINANCE

Calcutta, March 9.

There has been no change in the stringent conditions prevailing in the money market. Everyone is mostly a borrower and there are but few banks with any loanable cash on their hands. Interbank call money has been done as high as 3½ per cent., Hornby Road experiencing an even more acute phase of stringency in the earlier part of the week. Short credits were quoted up to 4 per cent. in Bombay, where however, rates eased off towards the finish, call money quoting only 1½ per cent. on Friday. This somewhat sudden transformation in the money market sentiment in the Western Capital is, possibly, due to receipt of considerable sums against gilt-edge securities which, in the current week, have been taken delivery of against Calcutta purchases. To the extent that easing of credits was due to this factor, a return to the earlier conditions is likely as and when Bombay takes delivery, in the following weeks, against her purchases of government securities from Calcutta. An interesting development of recent weks is the alternating banks. We advanced the hypothesis that most of the funds set free from maturities towards the finish of February must have been released too late for investment in intermediates before February 26.

In discussing Treasury Bills position in the last week's issue, we referred to the acute pressure felt in banking circles in spite of the considerable Treasury Bills Maturities over the closing days of February. We pointed out how no part of the money so released had, apparently, found its way into intermediate Treasuries and how no part of the excessive funds could be traced to the coffers of banks. This analysis of the money market position as it obtained last week gave rise the piquant question: What has happened to all this money? We advanced the following hypothesis:

The Treasury Bills *communiqué* of the current week would seem to confirm the aptness and accuracy of our explanation. Intermediates sold in the week covered by the *communiqué* came to Rs. 1.76¼ crores. The applications on the Treasury Bills tender day were also slightly larger. It is, therefore, quite reasonable to infer that alike in regard to the total tenders and total sales of intermediates, the *communiqué* of next week will make a better showing, especially in view of the fact that the average rate of accepted tenders has gone up to Rs. 2-2 from Rs. 2-1-4, and the tap rate has come down from Rs. 99-8 to Rs. 99-7-9. Though the realisations from intermediates have been more satisfactory, it is doubtful if the revised ways and means programme as laid down in the budget could be fulfilled without recourse to expansion of currency against transfers of surplus sterling assets from the Home Treasury balance to the currency reserves.

In this connection, the speech of the Hon'ble Finance Member and the Explanatory Memorandum of the Financial Secretary merit careful study. The budget estimate of the remittance programme for 1933-34 was £21 million. The revised estimate for remittances anticipates sterling purchases to an amount of £37.46 million. In addition, the Government hope to have received £3.81 million from silver sales. Thus the total sterling resources furnished from these two sources are estimated at £41¼ million, which is fully £20 million over and above the original programme. The excess over the budget estimate is to be devoted, acording to Sir George Schuster's budget speech, "to a further strengthening of our currency reserves." When we turn to p. 35 of the Explanatory Memorandum, the closing balance for 1933-34 in the revised figures is shown as £5.33 million. It may, therefore, be taken as certain that the intention of the authorities is not to retain surplus sterling in the Home Treasury but to transfer it to the Paper Currency Reserve either directly or indirectly through the Gold Standard Reserve. This fact is confirmed by the tentative remittance programme given on p. 36 wherein it is indicated that the transfers through the G. S. R. would amount to £11.63 million and those through the P. C. R. would amount to £12.8 million. The total transfers would thus come to £23¾ million of which the remittance *communiqué* up to the week ending March 3, shows only a transfer of £5 million. To this must be added the small-sized transfers that have taken place, from time to time, against relisations from silver sales. The total sale proceeds from silver are estimated for the year at £3.81 million.

For purposes of this argument we may assume that the entire proceeds have already been received and transferred to the P. C. R. The position is, therefore, this: Out of the estimated transfer of £23¾ million, the amount transferred up to date is £8¾ million. There is thus a balance of £15 million to be transferred.

Though the Finance Member has made it clear that the remittance programme as furnished in the budget is only illustrative, there is hardly any justification for any serious departure from that programme in absence of valid grounds. If this surplus of £15 million is to be transferred from the Home Treasury balance to the currency reserves, this should be followed by one of three operations: (*a*) there should be either cancellation of *adhoc* securities to the amount of Rs. 20 crores; or (*b*) there should be expansion of currency to the amount of Rs. 20 crores; or (*c*) there should be a partial cancellation of *adhoc* securities and a partial expansion of currency, the total making up Rs. 20 crores.

In answering the problem thus posed, the study of the tabular statement given on page 37 of the Secretary's memorandum is instructive. It is indicated that there will be a net reduction of floating debt to the extent of Rs. 13.82 crores. This reduction is to be in respect of the combined figure for Treasury Bills outstanding with the public and Treasury Bills owing to the currency reserve. Turning to page 38 of the Secretary's memorandum, we notice that Treasury Bills with the public will increase from Rs. 26.09 to Rs. 30.00 crores; and Treasuries in the Paper Currency Reserve would be reduced from Rs. 35.48 crores to Rs. 17.75 crores. The *ad hoc* securities to be cancelled in the Paper Currency Reserve would, therefore, be Rs. 17½ crores. We have already seen that if the transfers from Home Treasury to currency reserves should take place in this financial year acording to the programme laid down in the Budget, it would be necessary either to cancel *ad hocs* to the extent of Rs. 20 crores or expand currency reserve to the extent of Rs. 20 crores, or to combine the two operations to result in a total of Rs. 20 crores. It may, therefore, be concluded that the Financial Authorities contemplate the cancellation of *ad hoc* securities to the extent of Rs. 17½ crores and a small expansion of currency which might be in the neighbourhood of Rs. 2½ crores.

When we turn from the revised estimates to the progress of actuals, we find a considerable change in the situation. Against the revised remittance programme of £37.46 million, the actuals up to March 3 came to £39.11 million. There are to be four further weeks when sterling tenders will be invited; and it may be safely said that the Government would buy £4 million in tenders. To say that the Controller of Currency would secure at least £1 million at the tap rate is a conservative estimate, especially having regard to the tightness of money which has been a persistent feature of the money market. Therefore, the actuals on March 31 may be expected to be £44 million or even better. This would mean an excess of £6½ million over the revised remittance progremme. There is no case whatsoever for either the retention of this surplus of £6½ million in the Home Treasury or the transfer of this balance to the Paper Currency Reserve without a coresponding expansion of currency. In this connection, it is pertinent to observe that the Imperial Bank cash has been showing a steady decline. From Rs. 11.89 crores on February 3, it has dropped to Rs. 10.6 crores on March 2. Even making allowance for the usual month-beginning outgo of cash, it seems evident that the tendency is for a greater demand for the Bank's cash than has hitherto been the case in the recent past. Judging by the tightness of money conditions, it seems safe to infer that the next week's statement of affairs of the Bank would disclose a still further drop in the Bank's cash. In view of this there is a strong case for utilising the surplus sterling balance of the Government for the replenishment of the cash position in India.

In conclusion, we urge that the minimum expansion of currency that should take place is Rs. 2½ crores as foreshadowed in the Budget and the equivalent of £6½ million (which represents the excess of actual remittances over revised estimates) or Rs. 11 crores in all.

In this context it is relevant to draw attention to the large ways and means advances outstanding. The return of the Imperial Bank for March 2 shows the figure as Rs. 10 crores. There seems to be little justification for keeping large sterling balances in London which earn a nominal interest of 1 per cent. or so, when the Government are paying in India probably well over 3 per cent. on their borrowings from the Imperial Bank of India.

Exchange has been very firm. There have been good sellers at 1s. 6 5/64d., for all-March T.T. On the weekly tender day, applications were received to the extent of £58 million at 1s. 6 1/16d.

The closing rates are: 1s. 6 5/64d., March T.T.; 1s. 6 1/16d.; April T.T.; 1s. 6 3/64d., T.T. for the first half of May; 1s. 6 1/32d., May-June T.T.; 1s. 6d., July-September T.T.; and 1s. 5 31/32d., T.T. onwards.

Banks have been asking full rates for bills which may be quoted: 1s. 6 3/16d. for March; 1s. 6 5/32d., April; and 1s. 6 1/8d., May-August.

Money has been in keen demand with few lenders. Interbank call money may be quoted 3¼ per cent. Firms' money for call, three days' notice and seven days' notice was quoted ¾ per cent. One and twomonth deposits were quoted at 1¼ per cent. and threemonth deposits 1½ per cent.

BANKS:

It is a mistake to think of a Bank as an institution which exists merely for the purpose of taking care of depositors' money and paying it out on their instructions. Whilst it is true that this is the primary business of a Bank, it forms only a part of the duties which Lloyds Bank is prepared to perform for its customers. It is not possible in a short space to enumerate the many facilities the Bank offers, but its Branch Managers are prepared to consider, or, if they are not themselves in a position to advise, to obtain expert opinion upon any question affecting their customers' finances, investments, income tax, Trusteeships, Executorships, etc.

FINANCE ABROAD

	Sterling dollar rate	Sterling franc rate	London price of gold
March 3 ...	5.07 7/8	77.21	136s. 10½d.
March 4 ...	5.06 15/16	76.96	136s. 10d.
March 6 ...	5.06 3/4	77.03	137s. 2d.
March 7 ...	5.07 15/16	77.25	136s. 10d.
March 8 ...	5.07 7/8	77.15	136s. 8d.

A somewhat uneventful week in international finance! The principal exchanges fluctuated within comparatively narrow limits; and nothing momentous has happened. There is some reason to think that the period of sensational upsets in international finance is being slowly left behind and that the resumption of stable conditons has begun. An obvious qualification of the above statement is the policy of the gold bloc in the future. How far the readjustment of exchange relations on the basis of a continued preservation of a gold standard can be effected remains to be seen. Closer examination would, perhaps, reveal the need for a revaluation of the gold currencies. And it is too much to expect that such revaluation could be effected in the same smooth way in which Czechoslovakia, for instance, devalued her currency, by a sixth. If and when such revaluation is attempted by France and her friends on the gold bloc there is bound to be a period of considerable uncertainty and instability. What we meant, therefore, by saying that the period of sensational upsets is being slowly left behind is that, so far as America is concerned, her gold price has become effective, though it still continues to be profitable to export gold to the United States.

And France, too, we understand, has made a move in the right direction by deciding to remove the technical difficulties which, we pointed out on an earlier occasion in these columns, she had placed in the way of the withdrawals of gold from the Bank of France. It was observed at the time that such technical difficulties should have an appreciable cumulative effect in reducing and delaying the withdrawals of gold and that France could not be expected to be in a hurry to part with her gold stocks. It would not appear that such restrictions had had an adverse effect on confidence in the franc and were, therefore, calculated to defeat their object. And the authorities, with commendable insight and alacrity, have removed these impediments in the free flow of gold abroad. Encouraged by the action of the gold have gone on merrily in their game, but without anticipating the difficulties they may have to encounter at the other end, namely, America. It is learned that the Federal Reserve authorities were not able to cope with the work involved in the acceptance of huge imports of gold. Formerly, it was the ackowledged procedure of the Federal Reserve Banks to accept gold tendered to them and pay 95 per cent. of the value, leaving the remainder for adjustment after the gold has been assayed and valued. But now it would appear they have not followed the same course; with the result that arbitrageurs, who make their plans on the expectation of realising a greater part of the dues in America without any delay, have had to wait indefinitely for effecting and realising the proceeds of the sales. As arbitrageurs generally depend on a quick turnover rather than on the volume of the resources for making their profits, their plans have been considerably upset and the flow of gold from France into America has been, so to say, stemmed by the administrative difficulties encountered by the Federal Reserve Bank authorities.. All this is somewhat to the good, in as much as violent movements either way are checked thereby.

The best evidence of the practical success of the gold policy is furnished by President Roosevelt switching on during the week to the national recovery programme and the measures which in its present state it calls for. Though the recovery programme has been assailed both in and outside America on various grounds, and leading businessmen and orthodox economists are still sceptic of the wisdom of attempting to promote recovery by plans for the expansion of purchasing power, Mr. Roosevelt's faith in his remedy not only remains unshaken, but has apparently been strengthened by his experiences during the last eleven months. On the morning of March 5, Mr. Roosevelt delivered a broadcast speech on the future of the National Recovery Administration. With a courage, for which Mr. Roosevelt has become famous, he urged for further reduction of working hours. The object of this measure is to create employment for at least one million more of American workers; and Mr. Roosevelt is confident that, once this is done, all sections of industry will reap equally appreciable advantage from the improvement in trade which must necessarily result therefrom. The President put it squarely that there is no room to hesitate between profits and humanity with millions still unemployed.

The only practical question, which, as the originator of this idea of reviving industry through increased wages and employment, Mr. Roosevelt should feel called upon to tackle is the provision of credit for industry in sufficient volume to enable it to tide over the inevitable period of transition. This, by all tokens, the President is now in a much better position to do than when he started the recovery campaign nearly a year ago. With pardonable pride, Mr. Roosevelt pointed out in his broadcast address that the banks were in a much stronger position now than this time last year and that it would be feasible to formulate a scheme of adequate credits for industry.

Whether the high-placed opponents of Mr. Roosevelt's policy have been placated or won over or whether they continue to remain in opposition, there can be no doubt that the masses are solidly behind the President in his determination to bring about the prosperity of the people. It is interesting to watch the increasingly socialistic tone of the utterances of the President's lieutenants. Mr. Harold L. Icsks, the Secretary of the Interior, who spoke immediately before Mr. Roosevelt's speech, talked openly of "the bloodless revolution that turned out from seats of power the representatives of wealth and privelege" and, what is more, he referred to President Hoover as the "champion of that ruthless exploiting individualism that is in the main responsible for the terrible economic situation in which we found ourselves." "We are not in the world," Mr. Ickes declared, "to work like galley slaves for long hours at toilsome tasks in order to accumulate in the hands of 2 per cent. of the population 80 per cent. of the wealth of the country." Language such as this clearly points to a high sense of security in the directors of the President's recovery campaign.

Even more reassuring is the fact that the President has turned his attention now to the commercial relations of the limited states with foreign countries. The improvement in the trade relations with Russia is a matter of common knowledge. And now the President states in a Message to Congress that he seeks authority within carefully guarded limits to modify the existing import restrictions so as to benefit American agriculture and industry. The reasons for Mr. Roosevelt's anxiety to put America's foreign trade relations on a stable and clear-cut basis are not difficult to understand. For one thing, the increasing vogue of bilateral trade treaties has necessarily meant that those

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 89/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 3¾ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 2 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3 per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 3¼ per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

COMMUNIQUES AND RETURNS

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months' Treasury Bills were opened on Tuesday, March 6. The total amount offered was Rs. 1,92,00,000. Tenders at Rs. 99-7-9 and above were accepted in full and those at Rs. 99-7-6 were allotted approximately 88 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Rs. 2-2-0 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Tuesday, March 13. Successful tenderers should make payment on Thursday, March 15. Other conditions are as usual.

Three months' intermediates will be sold from March 7 to 12 at Rs. 99-7-9 per cent. subject to the conditions previously announced.

Three months' Intermediates sold from February 28 to March 5 amounted to Rs. 1,76,25,000.

STERLING TENDERS

The Controller of the Currency notifies that on Wednesday, March 7 tenders to the amount of £58,000,000 at 1s. 6 1/16d. were received and allotted approximately 1¾ per cent.

On Wednesday, March 14, £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE

The balance of the Gold Standard Reserve on the 31st January, 1934, amounted to £40,000,000 and was held in the following form:—

	£
Cash at short notice at the Bank of England	3,497
British Treasury Bills	19,866,568

MARKET REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March 8.

Trading on the stock exchange was on a somewhat restricted scale during the past week and, on the whole, quieter conditions prevailed. Government securities opened firm, but as the session progressed the pronounced strength had its setback. Jute mill shares were in turn easier in sympathy with weaker commodity prices. Cottons remain unchanged, while some improved demand was noticed in coals. Apart from some activity in Engineering and Sugar groups, there has been nothing of any particular interest in Miscellaneous Industrials. A little more interest was evinced in Tea shares towards the close.

Government Securities.

Giltedge securities opened firm on Monday and a fairly large business was put through, especially in long-dated loans at advancing rates. As the session progressed, however, this activity was not maintained and a quieter tone prevailed, presumably due to profit-taking and on account of quieter London advices.

Among the three longer-dated loans which participated in the rise, pride of place may be given to 4 per cent. loan (1960-70) which, from a quotation of Rs. 101 during the week-end, sharply advanced to Rs. 103 on Tuesday due to shortage of scrip. The next in importance was 3½ per cent. New Loan (1947-50) which was marked up to Rs. 97-8 on strong buying. 3½ per cent. Government Paper was very firm during the early part of the session and was quoted roundabout Rs. 88, but at the time of writing profit-taking was responsible for depressing the rate down to Rs. 87-2. 4 per cent. loan (1960-70) is now available up to Rs. 102-6 and 3½ per cent. 1947-50 up to Rs. 97-4. Interest in the other loans was comparatively insignificant, owing, perhaps, to lack of sellers. Among medium-dated issues, 5 per cent. loan (1939-44) was in demand, but scarcity of scrips accounted for the restricted turnover.

Bank rate remained unchanged at 3½ per cent.

Fixed Interest bearing Securities.

In view of the drop in the yield obtainable in government securities, owing to its marked rise, the eyes of the investors naturally are turned towards better class preference shares. There were keen buyers for jute mills preference shares at full rates, but business was restricted due to scarcity of scrip. Among Industrial preferences, British India Corporation 8 per cent. preference advanced sharply to Rs. 128 following the publication of their report, announcing a two-year dividend. Burn & Co., (6 per cent. pref.) was marked up to Rs. 101, Indian Standard Wagon (7 per cent. pref.) up to Rs. 115, and Kumardhubi Engineering (7 per cent. issue) recorded a further rise up to Rs. 50, Bengal Telephone (7 per cent. pref.) kept steady up to Rs. 14 and India General Navigation & Railways (5 per cent. pref.) were dealt in up to Rs. 105.

Among debentures, Calcutta Municipal and Calcutta Port Trust issues met with a fair enquiry, but only a small business was reported.

Among Jute Mills Debentures, 6 per cent. 1919-39 Alexandra Jute Mills changed hands up to Rs. 104-8. Among Industrials, 5½ per cent. 1915-40 Dalhousie Property recorded a few deals round Rs. 96 and 8 per cent. 1921-36 Titaghur Paper Mills changed hands at Rs. 107-4.

Other Investment Stocks

Imperial Bank's fully paid up issues were marked up to Rs. 1,270 as a result of buying from Bombay side. Contributories also advanced to Rs. 314. Central Bank shares are not available below Rs. 25 and a small lot of Allahabad Bank shares recorded a deal at Rs. 375.

Owing to the rise in the price of government securities, enquiry was in evidence for Raiway shares carrying 3½ per cent. Government guarantee, but only a small business was reported.

Cottons.

The undertone remained steady although business has not broadened. Muir Mills (ordy.) changed hands at Rs. 243 while Kesorams (ordy.) were easier at Rs. 3-6. Benares Cotton & Silk improved to Rs. 1-12 on dividend rumour.

Coals.

Although there is no fresh news about the progress of the Restriction Scheme, prices of some of the selected stocks have improved. Amalgamateds were quoted up to Rs. 15-2 from a quotation of Rs. 14-8, Bengal Nagpur (ordy.) kept very steady up to Rs. 41-8 ex-dividend, Equitable (ordy.) up to Rs. 21-8, East Indian at Rs. 17, New Beerbhoom (ordy.) at Rs. 12, Sendra at Rs. 10-10 and Seebpore Rs. 13 premium. Bengal and Burrakurs (ordy.) were, however, slightly easier at Rs. 339 and Rs. 14-2 respectively.

The official list of successful tenderers for coal for the State Managed Railways for the year 1934-35 has been published which shows that the Railway Board has purchased 2,419,000 tons of coal at a price of Rs. 89,27,519.

Reviewing the tenders it is found that the purchases have been largely confined to the cheaper qualities and Central Provinces Collieries have come off well.

Jutes.

The commodity markets ruled extremely quiet and the prices of Hessians and jute came down considerably. 9 porter hessians at one time were marked down to Rs. 9-9 as a result of heavy sales by a prominent Indian firm.

It was also rumoured that the Jute Mills Association intended increasing the production of hessians. Nervous speculators and weak holders, being anxious to realise profits, sold heavily and, as a result, rates declined all round. Mills, however, are not prepared to sell at present levels and consumers are holding off in view of the irregularity of prices. Jute shares have been adversely affected by the trend of events in the commodity markets. Howrahs opened on Monday at Rs. 55-11 and, after heavy fluctuations, touched Rs. 55-2 at one time on Wednesday. From this figures it again went up to Rs. 56-3, receding to Rs. 55-10 at the time of writing. Kamarhattys fluctuated between Rs. 560 and Rs. 552.

Towards the close, sellers were in evidence for most of the higher priced stocks and rates on balance were below the best. Anglo-Indians are now quoted Rs. 375, Bally Rs. 182, Barnagores Rs. 163, Cheviots Rs. 230, Deltas Rs. 367, Gourepores Rs. 407, Lansdownes Rs. 150, Naihatis Rs. 402, Orient Rs. 218 and Standards Rs. 340.

The statistical position of the industry has remained very sound and any improvement in the prices of hessians will surely be reflected on share values.

Electricals.

Electric supply shares have accounted for a fair turnover. Bengal Telephones both old and new issues were in request at steady rates. Upper Ganges Electrics were marked at Rs. 10-4 and United Provinces at Rs. 127.

Engineering.

The recent activity in Engineering groups has been fully maintained and prices have shown further appreciation in several instances. Arthur Butler advanced to Rs. 7, Bengal Iron to Rs. 4-7, Burn & Co. (ordy.) kept very steady round Rs. 215, and Indian Standard Wagon (ordy.) Rs. 50-8, Kumardhubi Engineering (ordy.) changed hands in fair quantities round Rs. 2-8. Indian Iron and Steel also kept steady at Rs. 5-3.

Sugars.

The recent fall in the price of sugar shares appears to have been arranged and more support was evident. As a result rates have hardened. Carew & Co., were marked up to Rs. 16-4, Cawnpore (ordy.) changed hands at Rs. 29-6 ex-dividend, New Savan were dealt in at Rs. 12-10 and Samastipurs Central at Rs. 9-8.

Miscellaneous.

B. I. Corporations on the publication of their report have improved to Rs. 1-3 for the ordinary shares and as. 12 for deferred issues. Burma Corporations also advanced to Rs. 10 on London advises, Bengal Flour was enquired for and changed hands at Rs. 106, Calcutta Tramways (ordy.) were quoted at Rs. 17, Bararee Coke at Rs. 9-10, Triton Insurance Rs. 180, and Midnapore Zemindary (ordy.) Rs. 62. Among Shipping Companies, India General Navigation & Railways (ordy.) were quoted at Rs. 84, Port Shipping Rs. 13-12 ex-dividend and Calcutta Landing & Shipping at Rs. 9-4. Calcutta Ice was enquired for but no business was reported so far.

Teas.

Although trading in this section was on a very limited scale and enquiry was confined to a very small group of selected stocks, holders sat tight and are not willing to break their limits. Towards the close a little more interest was in evidence and it is confidently expected that with the appearance of the last year's Reports some renewed activity will be seen in this section.

MADRAS STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Madras, March 8, 1934.

The securities market was most active, especially for 4 per cent. 1960-70 and 3½ per cent. 1947-50 loan in which a considerable business was done. These two were features, rising to Rs. 103 and Rs. 97-8 respectively, though they closed below these prices. The other loans were comparatively neglected, excepting 5 per cent. 1939-44 loan and 5 per cent 1940-43 loan which were taken up at Rs. 107-4 and Rs. 107-9 respectively with buyers over.

Amongst Native State loans, 4 per cent Mysore 1953-63 loan, after business being done at Rs. 100-14, rose to Rs. 101-8 whilst 6½ per cent. Mysore Loan changed hands at Rs. 177-8, 5 per cent Cochin loan was quoted at Rs. 105.

There were no transactions in municipal or Port trust debentures. Amongst joint stock company debentures United Nilgiri 7 per cent. 1934 were done at par. The preference share market was active. Buckingham preferences were bid up to Rs. 140, whilst Cambodias changed hands at Rs. 114, Deccans at Rs. 116. Tata Steel Second preferences and Spencers were neglected.

Amongst banks, Imperial Bank fully paids, after being done at Rs. 1,275, closed easier at Rs. 1,267½ whilst Contributories were fractionally firmer at Rs. 314. A large business was done in Bank of Mysore shares at Rs. 216, Bank of Indias at Rs. 107-4 and Indian Banks Big at Rs. 95. Central Banks also attracted attention rising to Rs. 25-8 cum dividend at the close.

Amongst public utilities, Madras Telephones were wanted at Rs. 16-12 and Rangoon Telephones at Rs. 11-8 both cum dividend. Excepting a transaction in Vellore Electrics at Rs. 11-12 and Tata Powers at Rs. 975, the market was dull.

Mill shares were firm. Buckingham ordinaries were done at Rs. 183, Cambodias at Rs. 9-4 and Gokaks at Rs. 114. The weak features were Coimbatores at Rs. 45 and Kaleeswarars at Rs. 255, reduced dividend affecting the latter. Cement shares were extremely active. Indians were done up to Rs. 350, Shahabads to Rs. 315 and United Cements at Rs. 73, though they closed below these levels.

Sugars were steady with Deccans done at Rs. 272½.

Amongst planting scrips, Cochin Malabars hardened to Rs. 1-12, Vellamalais to Rs. 10, Nilgiri Neerugundis Rs. 1-4 and Highland Produce to Rs. 17 whilst United Nilgiris continued a popular feature at Rs. 99.

The miscellaneous market was dull with sellers of Burma Corporations and Singarenis at quoted levels.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Bombay, March 8.

Securities:—3½ per cent. Paper, from its last closing rate of Rs. 86-11, firmed up to Rs. 88-2 on Monday due to continued bullish sterling advices from London and a record rise of £2 was reported on Friday. Hectic conditions naturally prevailed and frequent bouts of profit-taking occurred. The Treasure, however, paid a higher rate of interest on Bills this week and later, on London advices being easier, rates sagged from Wednesday touching the lowest to-day at Rs. 87. The closing rate, however, was Rs. 87-6. Other issues ruled fairly steady particularly 4 per cent. 1960-70 and 3½ per cent. 1947-50 which were in great demand.

In Textile shares prices fluctuated within narrow limits. Industrials too improved during the week and big electric power shares were in the limelight. Cement shares also proved attractive and the movements in important scrips will give a clear idea of market activity:

	Previous close			Highest			Lowest			Close to-day		
	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.
Century ...	206	4	0	210	10	0	206	4	0	206	4	0
Nagpur ...	232	8	0	240	10	0	233	12	0	235	[illegible]	10
Swadeshi .	159	6	0	165	0	0	160	0	0	161	14	0
Andhra Valley ...	1358	12	0	1416	4	0	1361	4	0	1405	4	0
Tata Power ...	930	0	0	1000	0	0	931	4	0	995	0	0
Tata Steel (ordy) ...	52	10	0	55	2	0	52	14	0	54	0	0
,, ,, (defd) .	197	8	0	208	2	0	200	0	0	205	0	0
Indian Cement . .	318	12	0	357	8	0	320	0	0	346	4	0
Imperial Bank (old)	1265	0	0	1276	0	0	1267	8	0	1273	12	0
Bombay Burma (,,)	415	10	0	440	0	0	417	8	0	431	14	9
Tata Construction	59	0	0	864	4	0	59	8	0	63	0	0
Bombay Tramways	140	10	0	144	6	0	141	4	0	141	14	0
Central Bank	24	6	0	25	8	0	24	4	0	25	6	0

There is undertone of great firmness in Tata Steel Second Preference. The Steel Company has done well in the year which will close on March 31, output being maintained more or less at maximum. It is expected that bank borrowings will show great decrease in next balance-sheet. Two—year dividends are expected on the second Preference. These shares have resisted sales from a well-known quarter and are bound to rise appreciably on the current rumours receiving some measure of confirmation; In which case a rise upto or even over Rs. 150 is not unlikely.

JUTE AND JUTE GOODS

JUTE

Calcutta, March 8.

The raw jute market in Calcutta during the week under review has ruled very quiet and values have been tending lower. The highest and lowest in the futures market were Rs. 32-6 and Rs. 30-6 respectively.

Opening after the holidays on Friday the market was rather steady and buyers were showing small interest for readies at Rs. 29. Some inter-bazar business was done up to Rs. 29-8 for March 15. Sellers were very much reserved and had no inclination to reduce prices. But the weakness that developed in the hessian market did not allow jute to hold its own. There was a very heavy and unexpected unloading by a big operator in the hessian market. The latter, in the course of the week declined from Rs. 10-4 to Rs. 9-10 and had its natural repercussions on the raw jute market. In sympathy with the hessian market a weaker tone developed and the market closed at Rs. 32 on Saturday. As the week progressed, bulls came out to liquidate freely and by Wednesday the market touched Rs. 30-6. On Thursday the market opened at Rs. 30-12 and has been ruling steady at Rs. 31.

Good business was done by shippers at about Rs. 28-8 for the middle and the whole of March with buyers over at the close. Mills were, however, not much interested, some business was reported being done at Rs. 4-8 and Rs. 4 for LR and XLR.

London, March 8.

Early in the week the market ruled steady and fair. Good business was done at about £16-15. Towards the close a weaker tendency developed in sympathy with Calcutta. Buyers were holding off in expectation of lower prices and pressure to sell was visible. The undertone of the market is, however, steady.

JUTE MANUFACTURES

Calcutta, March 8.

Further weakness was noticeable in the hessian market during the week. Nine porter hessians had come down to Rs. 9-10 as against the last week's closing price of Rs. 10-2. Towards the close a small recovery was noticeable. The weakness was caused on account of a heavy bull liquidating his holdings. The sales started at about Rs. 10-8 and continued right up to Rs. 9-12. The total quantity sold is reported to be about 4 crore yards. All the sales have been absorbed by bears and bazar dealers, and unless a substantial part thereof is disposed of at the consuming centres, the local market will remain too top-heavy to carry them without further decline, which may not be steep but a gradual one.

Early in the week good business was reported done from the consuming centres. But, due to weaker cotton and freer offerings from Calcutta, the buyers have momentarily withdrawn and are watching fresh developments. Rumours were afloat in the bazar, that Indian Jute Mills' Association is contemplating opening five per cent. hessian looms, out of fifteen per cent. now sealed, and will close down five per cent. sacking looms instead. Enquiries from reliable sources reveal no such change and the rumours are said to be unfounded, floated by interested parties.

Heavy goods market was also firm in the early part. B. Twills were done up to Rs. 25 and Liverpools up to Rs. 28. Later with the easier hessians, this section has also ruled easy and values have declined by about As. 8. Buyers also seem to have been satisfied at the moment and enquiries from consuming centres are poor.

The stock of hessians at the end of February is 75 lakhs yards more than that at the end of January, whereas the stock of heavy goods is less by 68 lakhs yards. The estimated stock is 8.08 crore yards hessians and 10.39 crore yards of sacking. The stock of hessian is 1 crore yards less than at the same date last year and that of heavy goods is 1 crore yards more.

New York, March 8.

Early in the week the market was steady with a good business resulting. Later due to various rumours from Calcutta regarding the contemplated change in the opening of hessian looms and rather heavy selling pressure, the market has eased down. Wall Street has also been easier and the fate of the Bankhead Bill is uncertain. Nine porters hessians is quoting at 5.10 against 5.30 last week, a similar decline has taken place in the case of 11 porters hessian as well. There is resistance against a decline but a rise also is arrested by bull liquidation at every rise.

COTTON AND COTTON GOODS

COTTON

(By Wire)

(From Our Correspondent)

New Wire

Bombay, March 9, 1934.

During the period under review, New York May rate fluctuated between 12.38 and 12.05 and Liverpool May rate between 6.40 and 6.21. The chief question for American cotton is whether any legislation would be enacted to control cotton production and, if so, of what nature. The Bankhead Bill is being discussed to-day before the House of Representatives and perhaps it would not be as effective as originally intended because of the modifications. The Government there do not appear to be in a hurry to raise cotton prices and the disparity between Indian and American cotton prices is daily becoming more glaring because of the inadequacy of spot demand.

Calcutta, March 8.

During the current week the cotton market has ruled quieter and nervous. Values on balance have been lower as compared with the previous week. Broach April—May opening at about Rs. 204, improved during the middle of the week to Rs. 206, but towards the close a weaker tendency has prevailed and the closing quotations are Rs. 200.

The weakness in the Indian market was due to easier conditions in the New York market. The vaues in the latter have been slightly higher over the previous week, but the undertone has been very dull pending the uncertainty of the Bankhead Bill. Modifications are suggested by the House Agricultural Committee in the Bill to provide a tax-free crop of 10 million bales against 9½ million bales originally proposed. The tax on excess ginnings has also been changed to 50 per cent. of the market value as against 75 per cent. These changes had a nervous effect on the market and has created an impression that the Government of India is not inclined to raise its cotton price above 12 cents, specially so early in the season. Naturally, in absence of fresh incentive, the market felt tired and a liquidation was the inevitable result. The liquidation has been well absorbed at the moment, but the market is still sagging and long interest is not likely to be created, the trade demand being slow. The resistance against a fresh fall is visible; consequently, the market is likey to rule narrow in the near future.

Following the trend of New York, Bombay market has also ruled easy and long liquidation has caused further weakness. There is resistance of about Rs. 200. But unless a fresh long bull interest is created at this level, the breaking of Rs. 200 may cause heavy short sales. Relatively Indian cotton is still cheap but the heavy stock position in Bombay (over a million bales) and poor shipments, are the discouraging features in the market. It is expected that during the current and following months increased freight allotments to Japan are expected and should this materialise the burden of the stock may be reduced to that extent.

BULLION

GOLD

(By Wire)

(From Our Correspondent)

Bombay, March 9, 1934.

Gold prices did not experience any exciting flutter during the week. London ready rate, from the last close of £6-17-1, came down to £6-6-10 yesterday. Franc rate closed yesterday at 77.25 as against the previous close of 77.34 after moving between 77.34 and 76.96. The sterling-dollar rate moved very narrowly between 5.06¾. Similarly the local gold price also fluctuated within three annas from Rs. 34-0-6 to Rs. 33-13-6.

Calcutta, March 8.

Throughout the week the gold market has remained featureless with minor, day to day, fluctuations. The values, on the whole, have been slightly steady, the quotations now being Rs. 33-14 against Rs. 33-12 last week. London gold has improved from £6-16-6 to £6-16-10. London-New York cross rate has been hovering around 5.07 and London-Paris at 77.15. Sovereigns are quoted at Rs. 21-5-6. Stocks in Bombay are estimated at about 3 lakhs tolas and the daily off-take at 3 thousand tolas.

London Air Mail Week:

The Bank of England gold reserve against notes amounted to £190,903,256 on the 14th inst., as compared with £190,902,659 on the previous Wednesday.

In th open market about £6,000,000 of gold was disposed of during the week under review. A keen demand for the United States of America has been maintained and offerings have been readily taken for that quarter, although movements in the exchanges have been such as to reduce the margin on the operation.

PIECEGOODS

There is not much activity in the piecegood market, though, the undertone is healthy. There have been various enquiries for bulky forward transactions, but the resultant business is comparatively poor. The higher cotton price has imparted a healthy tone to the piecegood section but has restricted business, because the higher cotton value has not been reflected in increased prices. Buyers are not inclined to raise their limits as they are doubtful if cotton will be maintained at the rise.

There has been a slightly better offtake early in the week for summer goods towards the close, the position being rather easy.

Fair business resulted in Lancashire goods and a moderate one for Indian shirtings, white mulls, mainsooks and drills. There has been very little business to report for Japan except in small quantities for red shirtings and fancies.

The following were the United Kingdom imports and exports of gold registered from mid-day on the 12th instant to mid-day on the 19th instant:—

SILVER

Bombay, March 9, 1934.

Another week has passed without fulfilling the expectations of bulls. No further developments have taken place in America while local bulls have been chafing. London spot rate has come down again to 20 3/8d and New York ready to 46 cents. Local rates have ruled fairly steady. The rate for April settlement moved between Rs. 62-2 and Rs. 61-8, quoting this evening at Rs. 61-11. The undertone, however, was good.

Calcutta, March 8.

The activity that was noticeable in the silver market before and after the announcement of the reduction in import duty on silver in India is gradually subsiding, though the turnover is fairly good. Early in the week Fagun went up to Rs. 61-10 but on profit-taking, values have come down to Rs. 61-2. Second settlement is quoted at Rs. 55-12. The reduction in the imports duty by Rs. 5-13-9 per 100 tolas has had no practical effect on the market, except beyond the fact that readies have been maintained at an advance. Forward silver which was about Rs. 6 per 100 tolas below import parity in India is now about Rs. 2 below import parity. Unless there is real improvement in the white metal the old disparity may again rule under pressure of sale of internal distress silver, with the result that the prices may be, in due course, lower to the extent of reduction in the import duty. It is, however, very uncertain what trend the silver market may follow. There have been hopes that the U. S. A. Government will try to improve the price of silver. In the latter event there is more room for a rise than a fall in the price of silver.

The rise in London market which took place during the previous weeks is well maintained and prices are more or less unchanged at $20\frac{3}{8}$d. Similarly Shanghai Tael is steady at 1s. $4\frac{1}{2}$d. Stocks of silver in Bombay and Calcutta are estimated at about 10,000 bars, daily off-take being about 40 bars.

London Air Mail Week:

Buying by speculators and the Indian Bazaars, influenced by rumours of further action by the United States of America with regard to silver, caused prices to improve, $20\frac{1}{2}$d. for cash and 20 9/16d. for two months' delivery being reached on the 19th instant; these quotations equalled the highest recorded last year.

Far Eastern exchanges did not respond to the rise, consequently the higher level attracted selling from China which brought about a reaction. Although New York bought occasionally, this quarter has been mostly a seller and, on some afternoons, offered fairly freely, whilst there has also been profit-taking by speculators.

In view of the reason for the advance in prices, the outlook is rendered very uncertain, depending upon developments in the United States of America.

The following were the United Kingdom imports and exports of silver registered from midday on the 12th instant to midday on the 19th instant:—

TEA

Sale No. 36 was held on March 6, when a little over 11 thousand packages were offered for sale out of which 1,600 chests were covered by export rights. The quantity offered for export being very small, the sale was rather dull, with an easier tendency. 6,500 packages of tea leaf and 3,000 packages of dust were offered for internal consumption. Prices were irregular but easy and the activity was very poor. Dusts, however, were in good demand.

Quotations:—

Teas with Export Rights

	March 6, 1934

Indian Tea—

At the London auctions on March 5, 26,500 packages of Indian tea were submitted for sale.

There was a good demand. Low medium qualities were often slightly lower. Medium kinds were about steady. Autumnal teas met with good support.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 13d., to-day's auction 13d. lb.; Common Broken Pekoe last auction 13¼d., to-day's auction 13¼d. lb; Common Orange Pekoe last auction 13½d., to-day's auction 13½d. lb.; Common Broken Orange Pekoe last auction 13½d., to-day's auction 13d. lb.; Common Broken Pekoe Souchong last auction 13½d., to-day's auction 13½d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 13⅝d., to-day's auction 13½d. lb.; Clean Common Broken Pekoe last auction 13¾d., to-day's auction 13⅝d. lb.; Clean Common Orange Pekoe last auction 13⅞d., to-day's auction 13⅞d. lb.; Clean Common Broken Orange Pekoe last auction 14d., to-day's auction 13¾d. lb.; Clean Common Broken Pekoe Souchong last auction 13¾d., to-day's auction 13⅛d. lb.

Ceylon Tea—

At the London auctions on March 6, 21,000 packages of Ceylon tea were submitted for sale.

There was a fair demand but the prices for common and medium qualities were easier. Good liquoring teas sold well.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 13½d., to-day's auction 13½d. lb.; Common Broken Pekoe last auction 13¾d., to-day's auction 13½d. lb.; Common Orange Pekoe last auction 14d., to-day's auction 13¾d. lb.; Common Broken Orange Pekoe last auction 14d., to-day's auction 13¾d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 13¾d., to-day's auction 13⅝d. lb.; Clean Common Broken Pekoe last auction 13⅞d., to-day's auction 13⅝d. lb.; Clean Common Orange Pekoe last auction 14⅛d., to-day's auction 14d. lb.; Clean Common Broken Orange Pekoe last auction 14⅜d., to-day's auction 14⅛d. lb.

Java Tea—

At the London auctions on March 1, 7,400 packages of Java and other teas (including Sumatra) were submitted for sale.

Prices were generally easier but tippy teas met with good support.

The following were the lowest prices fetched during the day's auction:—

	Last auction lb.	To-day's auction lb.
Common Pekoe	12½d.	12d.
Common Broken Pekoe ...	11¼d.	11½d.
Common Orange Pekoe ...	12¾d.	12¼d.
Common B. O. Pekoe	11½d.	11¾d.
Common B. P. Souchong ...	11½d.	11½d.

The following are the value prices:—

Clean Common Pekoe	12½d.	12¼d.
Clean Common Broken Pekoe ...	11⅞d.	11¾d.
Clean Common Orange Pekoe ...	13d.	12⅞d.
Clean C. B. O. Pekoe	12⅜d.	12⅛d.
Clean C. B. P. Souchong ...	12½d.	12¼d.

Average Prices—

The following are the average prices of tea in the London market during the week:—

	Last week lb.	This week lb.
Indian Tea (Northern) ...	14.79d.	14.63d.
Indian Tea (Southern) ...	14.89d.	14.66d.
Ceylon Tea	15.81d.	15.67d.
Java Tea	12.86d.	12.68d.
Sumatra Tea	12.34d.	12.21d.

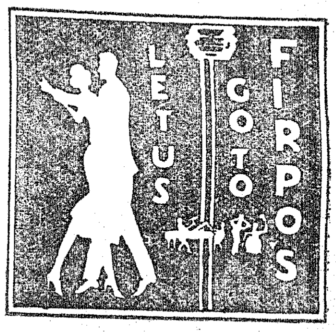
Editorial Comments



INDIA'S DISTINCTION !

Though there is a widespread feeling of uneasiness in this country, that India's foreign trade has not derived much advantage from the abandonment of the gold standard, few would have thought that, of all the countries which devaluated their currencies in and about 1932, India was the only one to have an increase in the adverse balance of goods and services in the first complete calendar year after the devaluation. That the depreciation of exchange helps to restore the equilibrium of foreign trade is more than borne out by the experience of the off-gold countries during 1932. A League of Nations' publication, "Balance of Payments 1931 and 1932," which has been recently issued brings out this fact most clearly. Complete figures for 1931 and 1932 are available only for 18 countries ; and of these, nine had stable, and nine unstable, currencies. A study of the changes in the movements of goods, services, gold and short and long term capital taken together has an interest all its own, especially as we hold the view that the reconstruction of national and international economy would be impossible, so long as the creditor-debtor relation is hopelessly weighted in favour of the former.

* * *

But it is, for the present, far more important to note that a study of the figures of goods and services, that is, of all movements of values *minus* gold and capital, discloses very interesting results. The advantage of devaluation is proved in both ways. Countries which had stable currencies suffered either a shrinkage of their favourable balance or an increase in their adverse balance. And those, which out of choice or out of compulsion decided to reduce the gold value of the currency, were able to effect a substantial improvement in their foreign commercial relations. Mostly, they turned a serious adverse balance into a substantial favourable balance.

* * *

The following tables are worth the most careful perusal of every one in India, particularly those who so complacently assumed during the discussions on the Reserve Bank Bill that all is well with India's currency and exchange :—

Balances on account of Goods and Services in 1931 and 1932, U. S. $ (000,000's)

TABLE I.

Countries whose currencies did not depreciate.

		Surplus deficit 1931	(+) or (−) in 1932	Change 1931 1932
United States	...	+145	+101	−44
France	...	−60	−214	−154
Germany	...	+258	+74	−184
Dutch East Indies	...	−45	−14	+31
Czechoslovakia	...	+30	−8	−38
Hungary	...	−38	−4	+34
Lithuania	...	−3	+3	+6
Estonia ...	...	+3	+1	−2
Albania	...	−2	−2	...
Total 9 countries	...	+288	−63	−351

TABLE II.

Countries whose currencies depreciated.

		Surplus deficit 1931	(+) or (−) in 1932	Change 1931 1932
United Kingdom	...	−472	−207	+265
Canada	...	−39	+5	+44
Australia	...	−73	+21	+94
India ...	...	−95	−147	−52
Sweden	...	−32	+20	+52
Norway	...	−36	+5	+41
Denmark	...	−19	+12	+31
Japan ...	...	−30	+35	+65
Finland	...	+24	+18	−6
Total (9 countries)	...	−772	−238	+534

It will be seen from the above that, while the nine countries enumerated in Table I suffered a transformation of a favourable balance of 288 million dollars into an unfavourable balance of 63 million dollars, the off-gold countries reduced their debit from $772 million to $238 million. And if India and Great Britain were excluded, it would be found that an unfavourable balance of 300 million dollars had been converted into a favourable balance of 109 million dollars, an improvement of 409 million dollars in all !

* * *

The difference between Great Britain and India in this regard, we trust, need not be laboured. The latest estimates of the Board of Trade give the balance of payments for Great Britain, taking all items into account, as *minus* £104 million, *minus* £56 million and *minus* £4 million for 1931, 1932 and 1933 respectively. The trend is thus clearly unmistakable ; and besides, if Great Britain incurs an adverse balance, it is definitely in the interests of a standard of living. And the invisible items, which count so much in Britain's balance sheet, stand for income from shipping, insurance and investments and cannot increase with a mere devaluation of the pound sterling. What we are concerned to note is that the so-called devaluation of the rupee has not afforded to India's foreign trade anything like the advantage which other countries have reaped from it. We have already pointed out that seven out of the nine countries listed above turned an adverse balance of 300 million dollars into a favourable balance of 109 million dollars, Finland being an exception to this rule. Britain also gained in that she was able to reduce the passive balance by more than half. *India alone has the distinction of increasing her adverse balance from 95 to 147 million dollars.*

* * *

We can almost hear Sir George Schuster, crying out, as he reads these lines, "What about gold?" We contend that the *raison d'etre* of gold exports is lost, when it is shown that our gold exports are not a case of drawing on reserves in times of difficulty, but only a means of squaring up an unbalanced position resulting from a gross disequilibrium of the exchange.

* * *

What a comment on our exchange policy that more than a year after the abandonment of the gold standard an increase in the adverse balance was all that we had to be thankful for !

GOLD RUSH

The return of the United States of America to gold bullion standard has, as was to be expected, led to considerable outflow of gold from the Continent of Europe, extraordinary activity in the London bullion market, and a hydra-headed inflow into America. The amounts involved are of colossal dimensions. France has been the worst sufferer, the difficulty in this behalf being accentuated by increased hoarding both of notes and gold. In an article appearin *L'Information* in Air Mail week, it is estimated that the probable amount of Bank of France notes hoarded at the moment in that country is in the neighbourhood of Frs. 25 milliards, and the amount of gold privately hoarded is Frs. 15 milliards. The total hoard of notes and gold taken together is thus estimated at Frs. 40 milliards. The gold reserve, as well as the stock of *devisen*, of the *Banque de France* has been most adversely affected. From Frs. 81.32 milliards on February 17, gold stocks had gone down to Frs. 74.43 milliards by February 16, 1934. Foreign commercial bills disappeared from the Bank return. Other foreign bills are down by over Frs. ½ milliard. In spite of this double drain, namely, exodus of gold to foreign centres and its disappearance into domestic hoards, the gold reserve position of the Bank of France continues to be extremely strong. The ratio of gold to engagements at sight was 77.65 per cent. on February 16, as compared with 77.67 per cent. a year ago. The ratio of gold to note circulation is as high as 91.80 per cent., though it shows some loss as compared with the position on February 17, 1933, when the ratio was 97.54 per cent.

* * *

There are abundant indications that the adjustments in the exchange markets have tended to curb the violent movements of gold, which, throughout February, were in the nature of a heady outflow from the Old Continent to the New, the stream passing through Britain. This week's exposition of the latest developments in France in our "Overseas News" section would also seem to indicate that the new Ministry has already succeeded in dispelling apprehension and restoring some measure of confidence. It is, therefore, reasonable to hope that the hectic transfers of the yellow metal, which were a marked feature of international finance in February, would show appreciable slowing-down in March.

* * *

As London has occupied a key position in this gold movement, it is well worth while to make a close study and detailed analysis of Britain's imports and exports of gold since the last week of January. In the week ended January 25, Great Britain imported gold worth £4.4 million, of which £1.52 million came from France; £.43 million from Ntherlands, £1.18 million from British South Africa; and £.47 million from Canada. The total exports were £100,000 and were sent in small lots to Germany, Switzerland, France and Mexico. The following week, that is, the week ended February 1, is interesting as the figures for this period foreshadowed the intense activity of the later weeks. Total imports into Great Britain were £5.97 million, France accounting for £1.42 million; United States for £.47 million; Canada for £.46 million; British South Africa for £1.52 million; and India for £1.11 million. Exports were only £200,000 and were, as in the previous week, in miscellaneous lots of small size. The week ended February 8 shows swollen figures on both sides of the account. Britain imported gold to the value of £14.40 million. France's loss in England's favour was no less than £6.23 million. Norway, Germany and the Netherlands accounted for shipments in the vicinity of £1½ millions each. British South Africa sent in £1¾ millions. The share of India in the imports was £⅔ million. Of the exports, which came to £6.20 million, the United

THE WOLSELEY NINE

The ARISTOCRAT In The 9 H.P. CLASS

This new model, which marks the return of the Wolseley company into the four cylinder field, is not merely a newcomer into an already crowded market. It is a genuine and successful effort on the part of a firm, world-famous as creators of cars of quality, to produce a 9 h.p. car of high performance, fine appearance and absolute reliability. Careful study of its details will show the soundness of its claim to be the real aristocrat of the 9 h.p. class. "Forward mounting" of the engine, and the clever use of the high proportion of body space, has resulted in a car unrivalled in its smart appearance, which accommodates four full-sized adults in perfect comfort. We shall be pleased to forward specifications and arrange demonstrations.

G. McKENZIE and Company (1919) Ltd.

208, Lower Circular Road, Calcutta.

States of America took the lion's share, the actual exports across the Atlantic being £5.98 million.

* * *

Still livelier conditions were witnessed in the following week. In the seven days ended February 15, imports of gold into England came to the colossal total of £35.90 million. The full force of the American developments was felt by France in this week. Shipments from that country came to as much as £26.92 million. Switzerland had also a considerable loss, imports from there being £2.25 million. Britain received from Germany £.67 million; from Netherlands £1.3 million ; from Belgium £.40 million ; from the United States of America £.89 million ; from British South Africa £1.36 million ; from India £1.56 million ; and from Australia £.31 million. The United States of America benefitted most from exports her takings being £7.56 million out of a total of £7.78 million. The last week, for which detailed figures are available, is that ended February 22. Imports into Britain in that week came to £18.35 million, France contributing the substantial amount of £12.77 million ; Germany £1.58 million ; Netherlands £.54 million ; Switzerland £.32 million ; British South Africa £1.01 million ; and India £1.39 million. The U. S. A. loomed largest on the export side. The gain of America in that week was no less than £24.23 million.

* * *

There is another point of view from which these figures should be studied. Between January 18 and February 22, imports of gold into England were £79.03 millions and exports £38.51 millions. On gold account, there has thus been a favourable balance of £40.52 millions. There can be no doubt that a good part of this metal should be considered as having found only a brief resting place in London. The final destination must be America. That there was not a bigger exodus to the U. S. A. in the period under review, was due to the difficulty of securing accommodation on ships and fixing up the requisite insurance. In fact, the movement from the Continent to America would have been sharp and substantial but for the operation of certain special and unavoidable factors. Had not these factors intervened, gold movements on the scale demanded by the situation could have taken place without let or hindrance, thereby facilitating and quickening the process of the adjustment of exchanges to the new situation. A brief reference to these factors is necessary in this context. The Bank of France authorities were not quite pleased, at the commencement, with the heavy westward flow. Paris has always set great store on its possession of enormous stocks of gold ; and it did pull a wry face when world developments were such as to weaken that position. But when the French authorities realised that, whether they like it or not, gold must leave France in response to the measures taken by America as also in response to domestic events, and that any artificial stemming of the gold tide would only re-act the more adversely on France, they removed all impediments to the outflow of gold. This was the first factor which was exercising a restraining influence on gold shipments in the early stages.

* * *

The second factor, whose effect has been felt in the later stages, is in connection with the difficulties caused by heavy arrivals of gold in New York. The Federal Reserve Bank of New York has been unable to cope with the consignments as and when they arrive, and there has, as a result, been a considerable congestion of gold in New York. The position in this behalf is thus described by the *Financial News* (London):

> "The usual practice is to take over the gold, and pay an advance of 95 per cent. on its value, until its exact value has been ascertained by assaying. At present it takes several days before the gold which is taken over is assayed, and, meanwhile, the owner has to cover the forward exchange on the outstanding balance of 5 per cent. This is not, however, all. Such is the congestion in New York that the Federal Reserve Bank is not even prepared to take over new consignments until it has assayed a great part of what it has already taken over.
>
> This state of affairs has several disadvantages. There is, in the first place, the additional cost of keeping the gold in safe custody with an American bank and the loss of interest. If the owner is not American he has to put up with the additional complications of covering the forward exchange. If he has worked on the assumption that he would be able to sell the gold in seven days, he has to renew his forward position for another week or so. If he has reckoned on a fortnight, and is repaid earlier, he has to swap to cover the difference of a few days.
>
> Above all, the capital of arbitrageurs is tied up as a result of the congestion. The resources of most of those now engaged in gold arbitrage are by no means unlimited, and they cannot undertake new shipments until their previous consignments have been cleared. In any case, they do not consider it advisable to involve themselves too deeply in the business, and rather than undertake another shipment before the last one has been cleared they prefer to forego the additional profit on arbitrage."

This congestion in New York and the consequent drain on the Federal Reserve Bank authorities, combined with the frenzied rise in insurance rates for gold shipments, have played an important part in the slower flow of gold America-wards.

PLANNING FOR JUTE.

Thanks to the *Weekly Jute Review*, a new entrant into Indian journalism, but with a field specially marked off for itself and an Editor with a title to speak on matters connected with jute, public interest in the problems of the jute industry has again been whipped up. The *Review* is evidently determined that the jute interests should be disturbed from their complacency and made to realise the dangers that are threatening them. Heirs to a prosperous trade and an exceptionally sound financial position, the heads of the jute mills in Calcutta are apt to be complacent, if not altogether somnolent, and underrate the possibility of troubles in the future. That in the past, restriction of output had, on the whole, realised its object and warded off the crisis is a circumstance which tends to weaken, rather than strengthen, one's sense of realism. The *Weekly Jute Review* has been at pains to point out that the monopolistic position of the Indian Jute Mills Association has been increasingly undermined by recent developments and that, therefore, the fundamental basis of the scheme of restriction now in operation is being swept away. The stage has been arrived at when the Association can neither abandon restriction for fear of all round ruination, nor persist in it, for the reason that its principal beneficiaries would be those who have not joined the scheme.

* * *

The exact causes of the development of such a position may be briefly referred to. Thanks to the restriction, which the Association mills and a few of the non-Association mills have imposed on themselves, the price of hessian at its present level yields a profit of Rs. 160 per ton to the mills which are signatories to the Agreement effected at the Government House last year. The mills, which are outside its scope and which work to their full capacity, naurally incur less overhead costs and enjoy a wider margin of profit. They are, therefore, able to underquote Calcutta; and the benefits of better trade naturally go to the non-restrictionists. It is a fact that, while the Calcutta mills are mostly working 40 hours a week and have got 15 per cent of their looms sealed, exports of raw jute to foreign countries are on the increase. Even at home non-restrictionist mills are freely adding to their equipment encouraged by the high profits and secure in the knowledge that the Indian Jute Mills Association will not cut its nose to spite the face. Mills are planned in far-off centres like Cawnpore; and the bogey of Japanese entry into the manufacture of hessian is still there.

In such a situation restriction has clearly lost all rationale. But what is the alternative? It is here that more careful thinking and, more, a fresh outlook are called for. We often talk of the dilemma, and the difficulty of impaling ourselves either on unrestricted production or on the continuance of the present agreement, for we implicitly rule out the planned control of the jute trade as a whole. Even the heads of the jute industry in India who are so vitally interested in its fortunes have not shown the capacity to face up to the problem. They either deny its existence by underrating the extent of the adverse developments or tinker with the problem, once it is posed. In his address at the annual meeting of the Indian Jute Mills Association Mr. Burn, for instance, was at great pains to show, that no new mills were established on the Continent during last year and that mostly the existing mills were working appreciably below capacity. Though, unquestionably, the danger point has not been reached, there is no questioning the fact that those, who are not participating in the restriction scheme, have been reaping profits, which are an irresistible inducement to increase of production and, if ncessary, of equipment. Likewise, those who participate in the restriction grow increasingly impatient of a scheme that has the merit more of benevolence than of business.

* * *

The most optimistic of us cannot deny that in the matter of restriction jute goods are becoming more on a par with other commodities, like tea and rubber. While in a case like rubber, the producers have at least learned the bitter lessons of unrestricted production, in jute men are apt to be more conservative and less nervous of the dangers of competition. Hitherto the jute mills in Calcutta were secure in the belief that, if any trouble developed in the industry, they had the remedy in the palm of their hands. If the present tendency to increase productive equipment should continue, restriction, when necessary, will offer the same insurmountable difficulties as in the case of tea and rubber; and such a position has already been reached.

* * *

The *Weekly Jute Review* urges that steps should be taken to narrow the margin of profit for hessian and suggests, besides a redistribution of looms between hessian and sacking, a scheme of export quota for the existing units, supplemented by an export duty on raw jute such as would increase the cost of manufacture to the foreign competitors of the Indian mills. The practical result, and the real object of this scheme, would be to shut out the mills that might be established in India in the future from the foreign markets. This is tantamount to a ban on new mills and additions to the equipment of existing mills.

We are, indeed, surprised at the manner in which economic control is sought to be sugar-coated. We should have thought that the world has moved far enough from *laissez-faire* to admit of schemes of economic control being put forward without any camouflage. What consideration is there for our shirking the conclusion that in the jute industry, planned control is at once inevitable and beneficial? The idea that an industry can be run with just that margin of profit, which will keep the existing units in full employment and at the same time scare away new producers, is a fiction of equilibrium economics which the bitter years of the depression should enable us to live down. The alternative seems to be between running an industry at a dead loss and reaching our hands for profits which melt into thin air even like the castles into which we often see the clouds shape themselves. In other words, new producers cannot be kept away except by incurring minimum losses. What productive effort can go on under such conditions? We urge that the time is come when the Government of Bengal and the Government of India should go into the question thoroughly and evolve the means of keeping to India all the advantage of a monopolistic industry and conceding to the pioneers therein their just dues.

* * *

Let there be no oldworldish squeamishness about economic control. That the plea for economic planning should be put forward by the European group, the inheritors of the spirit of individualism, is a happy augury, though the debate in the Assembly on this subject showed a deplorable lack of clarity in the minds of our legislators.

THE SPHERE OF LAW

The distinction between political and economic questions, which remained unchallenged during one of the most impressive periods of human history, has, we found in our enquiry into this question last week, no basis in logic. That it has no basis in the work-a-day world is the experience of nearly all governments in the post-war period and particularly during the years of the depression. If a problem can be solved only with the aid of the State or, in other words, the irresistible pressure which a government alone can exert and not by the efforts of the largest aggregation of individuals on a voluntary basis, then there is no meaning in branding it as a non-political issue. When people urge that a particular question is not a political issue, they either mean that it is a non-party issue, or that it calls for expert handling. The most handy instance of the former is afforded by the attitude of the British parties towards the continued subjection of this country's affairs to the dictates of Parliament. Obviously, a non-party

issue, inasmuch as no party would be prepared to pass the self-denying ordinance! But it is surely not non-political, all classes of the British people being directly interested in preserving the link with India. The need for expert handling, too, would not obliterate the political character of any social problem, but would only call for a surrender of the lay Legislature to the superior judgment of persons of indisputable ability and integrity.

* * *

We have laboured this point, as it is clear that there can be no conception of an adequate scheme of life for the individual for the State to take charge of, if illusory and unreal distinctions are allowed to persist in the minds of the leaders of society. It might be thought that to treat the economic fortunes of the individual as a concern of the State would involve an extension of the sphere of State activity beyond the limits of soundness and safety. We have no desire at this stage to discuss the merits and demerits of economic socialism. Nor do we propose, at this stage, to examine the practical consequences of the State recognising its responsibilities to the individual for his economic well-being. But we urge that the idea of a State ever remaining comfortably within its shell and putting out its prongs only when threatened with disturbance of the peace has not even the claim of age to recommend it. If the sphere of State activity was restricted in the ancient and middle ages, it was not because of a hide-bound theory of individualism, but because the state of human knowledge set its rigorous limits to the capacity of the social organisation to help the component individuals.

* * *

But individualism in modern times takes no account of either the expansion of human knowledge and the potentialities of organised social effort or of the vast increase in the power of small groups of individuals to interfere with the life and happiness of others. In other words, individualism is a theoretical dogma which overlooks changes in circumstance. And this is only understandable. For in the sphere of economics, it only signifies an attempt to avoid the blunders of mercantilism. In its attitude to religion, it is an expression of the disgust and horror at the Inquisition and its variants. It was felt that the organised forces of society should be utilised only for purposes which command the common assent of one and all. But however useful individualism might have been as a corrective to past blunders, it cannot be forgotten that it was but a violent swing back of the pendulum and not progress along a chosen path. It was, not masterful action, but helpless reaction.

* * *

That mankind so completely forgot the limitations of individualism is due to the fact that it was buttressed both by interested political and money power and by a disinterested philosophy of politics. The latter probably arose from the strange fascination of the antithesis contained in the maxim that that government is best which governs the least. It gained ready acceptance, for the only idea of government we had in those days was that of a bullying policeman or a presumptuous and censorious official.

* * *

Not to speak of those who stood to gain by the absurd exaggerations of individualism in the economic sphere, even men of good will could never rescue themselves from hatred of government as such. They were intent on ringing it round in a barbed wire. The growth of democracy did little to reduce this antipathy. In fact, with the growing oppression of minorities by majorities claiming to sovereign power, the feelings of sensitive intellectuals were outraged all the more; and it has become the mark of culture to insist that the paramount social organisation commonly hinders, and not helps, the healthy development of the individual.

* * *

Hence it is that we find a distinguished political thinker like Prof. Zimmern suggesting (*India Analysed*, page 23) not only that the essence of Statehood is *"law-abidingness,"* but that the State "neither seeks nor cares for the passionate response which men reserve for those who have stirred the depths of their spiritual being."

He claims:

> "A State established on this principle, a State which is a realm of law, may be astir with great teachings and noble movements: its young men may see visions and its old men may dream dreams. But its teachers and prophets will be in the pulpit and in the market-place, in the porch and in the grove. They will not be on the Bench. Justice will sit unmoved, holding the scales even in her hands, whilst, under her protection, men and women labour to convert splendid ideas into enduring realities."

It is only fair to point out that the immediate purpose of Prof. Zimmern is to warn the Federal

India of the future against the danger of becoming a mere citadel of power and to exhort her to aspire to be a realm of law. But the anxiety to delimit the sphere of politics and to exaggerate the cultural value of a State that just governs is manifest in the above quotation. In fact, Prof. Zimmern reads the same idea into the saying "Render unto Caesar the things that are Caesar's ; and unto God the things that are God's," which he hails as the wisest of all political maxims uttered by the founder of Christianity. And he continues:

> "And that surely is also the message of the great thinkers and teachers and saints of India from the earliest days, with their insistence on singleminded concentration upon the realm of the spirit and on the reality of the Unseen behind the tumult of this world's affairs."

We confess we fail to follow Prof. Zimmern. That the realm of the spirit is outside the realm of the State may be readily granted. But it must be recognised that many matters that are the legitimate concern of the paramount social organisation, are sought to be included within the realm of the Spirit. "Conscientious objection" is made as much to compulsory vaccination and conscription as to the removal of untouchability. Many forms of oppression derive their sanction from religion, so-called. If we understand the term "spiritual" aright, it refers to a sphere, which is inviolate from the most militant power the world has known. The State cannot enter it, even if it will ; and if only for this reason, its freedom from State interference might be readily granted. But it is the significance of this idea to practical policy that we are now concerned with. Prof. Zimmern, as is only to be expected, is not the type of individualist who would seek to favour any one class ; and he rightly insists that the law is the same for one and all. The essence of statehood is, no doubt, *law-abidingness* and the essence of law, impartiality. But the idea of the impartiality of law calls for some examination. There is at first the impartial application of the law. Then there is the formulation of laws, which, so far as they go, do not make any discrimination between individual and individual. And lastly, it might be possible for the State to have a legal system which will be above all reproach of partiality, even if the State were judged by its acts of omission. Few States there are, which can be seriously censured under the criterion of impartial administration of the laws existing at a time ; for it is the easiest course to give the desired partialities the requisite sanction of the law. When thinkers like Prof. Zimmern lay stress on the impartiality of justice, they certainly do not mean impartial application of the law regardless of its purport, but the formulation of laws which favour no particular individual or class. But we believe they hardly think of the partialities which the State might be guilty of through its faults of omission. It is when the law recognises its duty to root out every partiality which it can help, that the purpose of law bursts its traditional boundaries and calls for a re-examination from the standpoint of social ends. We hope that what we have just now urged will not be misunderstood as a plea for a monotonous equality. What we mean is that Justice cannot claim to hold the scales even, when the law makes no attempt to avoid avoidable inequalities. When material inequalities continue on the sufferance of law, it is idle to suggest that in its realm men and women can "labour to convert splendid ideas into enduring realities." They might labour ; but it would be abortive. "Young men may see visions and old men dream dreams ;" but they will never come true. The limits of law must be sought elsewhere than in attractive phrases of high-brow intellectualism or in unthinking catch-words which pass into the vogue of fashion.

EXPORT DUTY ON HIDES

The exporters of raw hide have after all won the day and ultimately succeeded in convincing the

THE
WOLSELEY HORNET

The fame of the Wolseley "Hornet" has spread throughout the world, and this new 1934 model marks another great advance in the 12 h.-p. six-cylinder class. The specifications include a host of special features, prominent among which are the underslung compound frame, four-speed synchromesh gearbox with "Silent third," and controlled free wheeling of the well-tried and successful Wolseley type. We shall be pleased to forward specifications and arrange demonstrations.

G. McKENZIE
and Company (1919) Ltd.

208, Lower Circular Road, Calcutta.

Finance Member that there was a very special case for the abolition of the 5 per cent. export duty on hides—not skins. The agitation for the removal of the duty on hides and skins had never ceased since the proposal was thrown out by the Legislative Assembly in 1927. The Madras tanners were lucky then, in being able to win over the Government to their way of looking at the matter. The Government, in order to pacify the exporting interests, had agreed to the proposal that the export duty will be replaced by a cess, which would be devoted for the improvement of the industry as a whole, by which the exporters would profit ultimately.

The Hides Cess Enquiry Committee was appointed as a sequel. It produced an excellent report containing valuable suggestions for the improvement of the industry. The duty continued to remain as a purely revenue measure and the entire question of replacing the duty by an export cess was shelved and no notice was ever taken of the recommendations of the Committee.

* * *

We doubt if the removal of the small export duty on hides was necessary to alter the state of affairs, as far as the export of raw hides to Germany was concerned. The preservation and curing of our hides are so defective, that our hides are considered of a very low quality in the European markets. Germany it was that was buying these hides in any considerable number for making a special class of inferior leather out of these hides. The demand for this class of leathers has, of late, been supplied in increasing quantities by the Madras tanners, as is evident by the continued post-war rise of tanned leather exports from India to London and other European ports.

* * *

The majority of hides in India are collected from the Northern Provinces and Bengal for export to foreign countries as well as to Madras. The freight rates on Northern India hides from the port of Calcutta to Madras are such that the Madras tanners do not enjoy any great advantage over the importers of these hides in foreign ports, as shipping freights to foreign ports are abnormally low. The withdrawal of the advantage of the 5 per cent. export duty, which the Madras tanners had so long enjoyed over the foreign tanners for the same class of hides, will certainly tell heavily on the already impoverished tanning industry of Madras, without in any way helping the producers of the hides. It would have been to the interest of all concerned if the recommendations of the Hide Cess Committee had been given effect to and if efforts had been made to improve the quality of Indian hides by spending the proceeds of the export duty. Our exports of hides had a satisfactory increase during the ten months of this financial year as will be seen from the following figures:

	1932-33 ten months April to January	1933-34 ten months April to January
Cow hides (in tons) ...	9,177	13,404
Bufallo hides (in tons)	1,296	2,171
Calfskins (in tons) ...	236	286
Other hides (in tons)	250	927

The hides and skins trade does not move in regular courses and the contention of the Finance Member, that, because the improvement exhibited in the first six months of the financial year has not been maintained, this forebodes danger, shows undue nervousness and a lack of appreciation of the special characteristics of this trade.

(*Continued from page 563.*)

who are slow at this game will eventually find that countries, which normally would have given them handsome terms, had their hands tied in this regard by previous commitments. Secondly, though America's foreign trade bears a small proportion to her internal trade, the importance of the retention of foreign markets to the general reconstruction of the national economy can hardly by under-rated. This is well stressed by Mr. Roosevelt when he says that "the idle hands, still machines, shifts tied to docks, despairing farm households, which are the result of the decline in world trade and the drop in the exports of America of 52 per cent. in volume and 32 per cent. in value in 1933 as compared with 1929 has made infinitely more difficult the planning of the Government's economic readjustment. The time is gone when trade facilities could be negotiated for and a draft submitted to the Legislature for its final sanction and ratification. For, as the experience of Great Britain with her numerous bilateral trade treaties has shown, the Government has to possess power to modify its ideas and to offer advantages in return for more or less equal facilities from the other party." The usual constitutional limitations will prove a hindrance in such negotiations and Mr. Roosevelt has, therefore, asked for the necessary powers.

A Bill embodying the negotiating authority for which President Roosevelt has asked Congress has been introduced in the House of Representatives.

It provides, according to Democratic leaders, a complete and permanent tariff policy for the United States and repeals the flexible provision of the 1930 Tariff Act, stipulating that any agreement negotiated shall be terminable within three years, but may be extended indefinitely.

To pose as the "injured party" has its obvious advantages. You engage, and can even demand, sympathy from all but the party who is the villain that doth injury to you. There is ample scope for nagging—a delectable pastime in certain conditions. It affords you endless opportunities for "bargaining." It becomes worth the while for all the world to humour you and make much of you. Any deficiency or remissness on your part is set down to the injury under which you have to labour. It is a pretext for being less than what one should be, an extenuation for lapses, a plea for indulgence. And human nature is such that the party alleged to be the aggressor (even if it be in sheer self-defence or otherwise justified on perfectly reasonable grounds) is ever the recipient of all blame from the onlooker. By the same token, the party that professes to have been injured (even if to be fanciful) is the recipient of over-flowing sympathy. The pose of one unmeritingly injured is altogether thrilling; and the exhilarating sensation thus caused is more than amends for any injury even where it is real.

* * *

In the days when the Indian textile industry was subject to the excise duty, Bombay was fully able to exploit the situation ; and she knew, as none else does or can, how to. Lancashire was the villain of the piece, the Secretary of State was an aider and abettor in the crime. The cross which Bombay bore was one which, properly speaking, the entire country should bear. From every platform in every part of India, the selfishness of British interests was condemned, and the cause of Bombay was fervently espoused. The grievance of the Western Presidency knit all other provinces in the web of a universal grievance. "Look at my forbearance, my fortitude, my courage against these odds!", said Bombay. Bengal and Madras, the Punjab and Assam looked at Bombay's forbearance and expressed unstinted admiration. When Sir Basil Blackett abolished the cotton excise, he reduced Bombay to a commonplace status. She had no longer that intriguing aspect of injury patiently borne. And the other provinces started scrutinising her with commonplace eyes. "You are selfish," said some. "Your house is in great disorder," said a few others. "Your practices are unwholesome and questionable," said a good many. With the disappearance of the excise duty disappeared the glamour and piquancy which kept off the gaze of the rest of India from those human aspects of Bombay, of which she had a due share.

The pendulum swung violently to the other end. All that Bombay did was traced to a self-aggrandising spirit. It was freely said that she fattened on other provinces. She was alert and expert in propaganda and she won support for purely selfish causes because her capitalists knew how to corrupt public opinion and mobilise votes. For nearly eight years, Bombay, once the injured party, has been made out as the villain of the piece, her victims being every other province. In this evolution of events, Bengal has asked for universal sympathy as the party most injured. The controversy "Bengal *versus* Bombay" has gone on, gathering more and more rancour and giving rise to more and more controversy. Bengal is, in this matter, extremely sensitive. She has a long list of grievances ; and well-meaning friends on either side have been endeavouring to quieten ruffled feelings. Dr. B. C. Roy and Mr. N. R. Sarker on the side of Bengal, and Mr. Mathradas Vissanji and Mr. A. D. Shroff on the side of Bombay have been engaged in this mission of peace.

* * *

It would appear as though the cause of peace is never to have a peaceful run. Bombay has been greatly chagrined over Bengal's luck in Sir George Schuster's latest Budget ; and Bengal is vastly excited over Bombay's chagrin. The Eastern Province is described, in Western circles, as the spoilt child, and retorts that the Western Province is the pampered child. A Sheriff's meeting was held in Bombay, at which the Mayor presided and the speakers included representatives of all the varied sections, the spokesman of the Bombay Chamber of Commerce sponsoring the main resolution. An adjournment motion was carried in the Local Council. The Assembly Members hailing from Bombay spoke out their minds, without any thought of how their remarks would be received by their colleagues from Bengal. A College Street meeting arranged for this week-end is the rejoinder of this province. The millionaires and millowners of Bombay would, doubtless, be described in terms far from complimentary ; and those who have been, hitherto, fanning the flame of provincial jealousy would be able to exclaim : "Did we not say so? Have we not been proved correct?" The cup of rancour is full to the brim.

I am not concerned, on the present occasion, with the ethics or economics of the matter. I am merely questioning whether an agitation at the present moment and in connection with over-due relief to Bengal is at all politic? The identification of all Western interests in this cry is a token that it should not be lightly set aside; that there is some substance in Bombay's case. But, as a gesture in a psychological context, the move of Bombay is fraught with disastrous repercussions; it is ill-timed; it lacks in grace; it is just not the way by which redress should have been sought. I could almost hear the evil sprite chuckling to itself and murmuring in glee:

> "Now let it work.—Mischief, thou art afoot,
> Take thou what course thou wilt!"

* * *

O, what a notable career is thus cut short! The "expectancy and rose" amongst the Indian staff of the *Times of India*, Mr. P. P. Iyer was a powerful, pugnacious, withal pleasing, personality. "P.P.", as he was known in intimate circles, could think vigorously, argue combatively, write pointedly, and plan with dash and vision. These traits made him an efficient and arresting, if not an altogether popular, journalist whose strong point was his being equal to every manner of work in a modern newspaper office. As a Reporter, he left every compeer of his miles behind him. He could sense a story and pursue it quick and alert. He was a very bloodhound for news, a relentless tracker who, once on the trail, refused to own defeat. And when he had successfully pursued the track, his "story" was always well-dressed up, snappy and sensational. The *Evening News of India*, designed by the *Times of India* to give battle to the many evening papers started in Bombay early last decade, had to contend against the *Indian Daily Mail* for which the latest machinery was equipped and on which the vast resources of the ambitious and whimsical Mr. J. N. Petit were poured without thought of cost or return. To rout the *Daily Mail* was no easy matter; yet such was the task which was entrusted to P. P. when he was appointed the *de facto*, though not the *de jure*, editor of the *Evening News*.

* * *

If an evening paper has to forge its way with the reading public, it must make a speciality of "scoops"; it must, again and again, forestall its contemporaries in the "news" side. It has no use for long-winded or erudite editorials. Paragraph-writing, with plenty of pep and pepper, is the quality that will stand an evening paper in good stead. The *format* must be attractive; the lay-out striking; and the racing anticipations and reports exciting. The *Evening News* was just all this; and the one Editor who could have given it just these features was P. P. Iyer. His promotion to the Assistant Editorship of the *Times of India* was its gain at the cost of the *Evening News*. Of P. P., it may be said that he did not pay much heed to Polonius' warning to beware of entrance to a quarrel; at the same time, being in, he bore it, "that the opposed may beware of thee." Despite an inherent proneness to be combative, he was a most loveable, convivial and companionable friend; and, ever, his motto was:

> "Those friends, thou hast, and their adoption tried,
> Grapple them to thy soul with hoops of steel."

* * *

In an earlier issue, *Indian Finance* contained a brief reference to the flotation in Bombay of the Industrial Investment Trust under distinguished auspices. Th following was the concluding portion of the comment: "While offering it a rousing welcome, we would like to express the hope that its success would inspire the inauguration of a few more Trust Companies planned on right lines and directed by men of standing, probity and knowledge. Only thus could the small investor and the investor in the mofussil be induced to part with his savings and make them available for productive enterprise." As justification of the high terms in which we spoke of this new venture, I would request the careful attention of readers to the prospectus which was published in the last week's issue. Alike in plan and personnel, objective and *modus operandi*, the Industrial Investment Trust deserves praise; and I congratulate Sir Kikabhai Premchand and his illustrious colleagues on launching this pioneer enterprise in a way and on lines that set a noble example for its successors.

* * *

There have been various kinds of investment trusts started in India, principally in Bombay and Calcutta; but they were designed less to serve a public purpose than to be a kind of dodge for the evasion of the full penalty of income tax by certain individual capitalists. This enterprise of Sir Kikabhai will have, as its sole aim and object, the mobilisation of the resource of the many who do not or cannot know anything of scientific investment, and the utilisation of the proceeds in shares of carefully selected companies so as to ensure capital security and regular and progressive return to shareholders.

* * *

As early as the Summer of 1929, *Indian Finance* urged the need for Investment Trusts of this kind as the only solution to the baffling problem of shy capital in India. The Industrial Investment Trust gives me all the delight of a dream come true. It is as well that I explain to-day, in as brief terms as possible, what an investment is and does and how it works. Investments Trusts may be defined as "an agency by which the combined funds of many investors, both in large and small amounts, are utilised to purchase such a wide variety of securities that safety of principal is attained in diversification, while no control of directive responsibilities results from investments." The investment portfolio is so managed that a good average yield is sought on the capital, the close supervision of the portfolio permitting, at the same time, a turnover policy aiming at the realisation of capital gains and the avoidance of capital losses. The essential principle is, therefore, the investment of the available amounts in a variety of securities, internationally and inter-industrially, so as to benefit by the law of averages in the protection of capital. This joint investment fund is vigilantly supervised by trusted directors and experienced managers. Individual investors are, in most cases, owners of only comparatively small amounts of capital which does not allow for broad distribution of risk and for the availability of a highly trained staff for the investment and re-investment of funds. An Investment Trust is equipped with a staff who have made a speciality of the selection, diversification and management of investments.

* * * *

In simple terms, it may be said that an Investment Trust is nothing more than the machinery for enforcing the warning against placing all eggs in one basket. The Industrial Investment Trust is to have no managing agency; and no managing agency charges will, therefore, be paid. There are to be no promotion expenses. The promoters have shown their confidence in the concern by subscribing for half the issued capital and they are content with the prospects of an appreciation of the capital value of their holdings. This is a striking token of the *bona fides* of Sir Kikabhai and those associated with him in an enterprise for which there is not only ample scope but a long-felt and sore-felt want. I may again repeat the hope that the success of this venture would inspire the inauguration of more trust companies planned on right lines and directed by right men.

Eavesdropper

THE GATEWAY OF INDIA

(From Our Correspondent)

Bombay, March 7, 1934.

Bombay's nerves are, clearly, frayed. Financial worries harry the Government, the Corporation and the Port Trust, not to mention hard-pressed individuals. It looks almost as if the best days for this city belong to the dead past. More people see through the "balanced budget" of Sir Ghulam Hussain ; and even taking it at its face value, one naturally asks whether it has taken account of the landslide in Bombay, which is euphemistically called "diversion of trade." The situation is depressing beyond words. The city looks to Government ; the Government turns to the Corporation and the Corporation flings back a glance of mingled pain and reproach. And on the top of all this comes the news that an excise levied on an industry, in which Bombay is far from uninterested, is to lead ultimately to the relief of a few provinces ; all at the other end of India !

And the chief beneficiary is Bengal. And Bengal, which of late has made a fine art of baiting the Bombay bull ! The local legislature started the game. With a unanimous adjournment of the Council, so unanimous that the honour of giving the reply to Sir George Schuster and his new-found minx was yielded ungrudgingly to a nominated non-official, Mr. B. S. Kamat. Whatever the final verdict might be, there can be no question that the Bengal Government has been singularly innocent of any attempt to balance its budget without extraneous help, while Bombay has taxed itself, often as in the case of the Town duty on cotton, at the risk of losing the trade on which its prosperity rests. The comparatively light taxation of Bengal is a bye-word amongst the other provinces, not excluding mute Madras. And Mr. Kamat made the most of the contrast even going so far as to dub his province, the acknowdedged leader of Indian industry and commerce, as the "Cinderella of the Government." Similar phrases are, perhaps, current at that end too ; but at the moment Bombay is sufficiently down and out to lay a stronger claim to that not unhelpful appellation. Much was made of the fact that the levy which enables the grant of relief to Bengal comes out of an industry in which Bombay is so largely interested.

I do not know, though I can fairly guess, how these developments are viewed in Calcutta. But it is pretty certain that the public meeting held on Friday last and the tone of the speeches therein are not exactly calculated to reduce the acerbity between these two provinces. One might wish that the question had been left to the Legislative Council as a matter of most intimate concern to that body. It is one thing to rise up from one's seat in the Council and urge that Bombay's claims had not been heeded to by the Central Government. It is quite another for individual citizens to meet at the invitation of the Sheriff and betray unedifying feelings of chagrin at Bengal's luck. For, after all, the present financial stringency cannot be permanent either for Bombay or Bengal, while the need for good will can never be outlived. It is a thousand pities that no one stopped to reflect on the consequences of this meeting.

But, while one might regret the turn, which things are taking, no one can deny that the case for Sir George's proposals is the weakest imaginable. A hard-pressed province may well ask for and receive relief from the Central Government. But such relief must rest on some principle. To levy a duty on the match industry and, on the strength of this revenue, release a portion of a traditional source of central taxation for one province can have only one explanation, a deep political motive or incredibly inexpert finance. If, indeed, it is the finding of the expert committees connected with the Reforms that the jute export duty belongs to Bengal, it must, no doubt, be foregone ; but not in a manner suggestive of a premium on improvidence. Who in Bombay in her present plight can overlook the fact that Bengal has had little or no additional taxation during all these years of the depression, or that she has not had any retrenchment worth the name ?

To take the discussion along these lines would have been more seemly and becoming. Only Mr. Lely, the President of the Bombay Chamber of Commerce, kept up the dignity of a detached and dispassionate outlook. And the majority of those who spoke at the Sheriff's meeting resolved it to a straight fight between the two major presidencies.

To those who have followed the relations between the two provinces, these developments will hardly come as a surprise. There is no love lost between the two. Bengal's industrial inferiority makes the present protective tariffs a dead weight on the consumers ; and it would have been well if Bombay were content to defend them as a necessary evil and not altogether useless as an incentive to the industrialisation of Bengal. But it is well-known how some of our magnates have rubbed Bengal the wrong way. Nor can one overlook the fact that that Bengal has of late shown a tendency to cut her nose to spite the face. Some of her leaders have too easily played themselves into the hands of foreign interests, as, for instance, in the recent demand for a change in the ratio. It is unfortunate that there has been little or no check to these inter-provincial jealousies and bickerings. And there need be no stronger argument against the proposals of Sir George Schuster than that they are a veritable apple of discord, which dismembers the Indian family and sets brother against brother. After all, Bengalee nationalism, might also reflect for a moment that the present grant is but a fresh charter for repression and dulls the edge of economy in administration.

The worst of these proposals is that they are most ill-timed. The Government and the Corporation have just come to grips with the questions arising from the diversion of trade. On Monday the latter resolved itself into a committee to discuss a letter from the local Government regarding the

THE PUBLICITY SOCIETY OF INDIA, LIMITED.

NOTICE IS HEREBY GIVEN that the First Ordinary General Meeting of the Shareholders of the Company for the year 1934 will be held at the Registered Office of the Company, No. 1, Waterloo Street, Calcutta, on Saturday, the 10th March, 1934, at 10 a.m.

To receive and approve the Directors' Report and the Audited Accounts for the half-year ended 31st January, 1934, and

To transact such other business as may be properly transacted at an Ordinary General Meeting.

The Share Transfer Register of the Company will be closed between the 3rd and the 10th March, 1934, both days inclusive.

Dated this 24th day of February, 1934

By order of the Board,
M. S. RAJAGOPAL,
Secretary.

Town duty on raw cotton. The Corporation was asked whether, if the Government were prepared to forego their part of the Town duty, they would be prepared to do the same in order to secure the object aimed at. The case for the abolition has been cleverly argued out. The Government point out at first that owing to the rapidity of diversion, the sacrifice which the Corporation is called upon to make, might eventually prove to be very little in fact.

Another supposition was also put forward for the examination of the Corporation, namely, that Government decided, instead of abolishing the duty entirely, to authorise a refund of one rupee per bale on all cotton exported from Bombay, and to leave the whole of the remaining revenue to the Municipality. In that case, in view of the fact that, when the legislation was originally passed in 1920, the share assigned to the Municipality was intended to correspond approximately to the amount locally consumed, it was probable that the Municipality would realise little or no revenue on this account in 1934-35. For the stock of cotton in Bombay to-day is about 10 lakhs of bales, whereas the consumption in the mills was estimated at only 4½ to 5 lakhs of bales.

The letter further stated :

> "In view of the practical difficulty of identifying the particular bales on which town duty has been paid, it is likely that refunds would be claimed on almost the whole of the raw cotton imported into the city during the next twelve months.
>
> "The representatives of the Corporation were also informed that as against a possible revenue of 4½ or 5 lakhs of rupees which the Municipality might hope to realise by any method of taxation on cotton locally consumed, the conversion betterments, separately communicated to the Corporation, will reduce the loan charges which the Corporation will have to pay in 1934-35 by about 2¼ lakhs on municipal loans and by nearly 1¼ lakhs on Improvement Trust loans, yields a total recurring betterment to the finances of the Corporation of nearly 3½ lakhs a year.
>
> "I am to request that the Corporation will be so good as to consider the position urgently, and to favour Government with their views not later than Wednesday, March 7".

After some discussion it was finally decided that the Corporation should ask Government for an alternative source of revenue to compensate them for the loss on account of the Town duty.

The next development, in this instance, is the conference held between the Government and the Corporation ; and it may be taken for granted that the representatives of the latter urged the view which had met with the acceptance of the City Fathers. But they recognised that a somewhat difficult situation had been created for them inasmuch as their reluctance in the face of the assent of the local Government to forego their share and the readiness of the Railways and the Port Trust to reduce their dues would appear to smack of unreasoning obstructionism. Nevertheless, the Corporation representatives are stated to have given partial support to this suggestion by agreeing to suspend the Town duty in respect of cotton exported from Bombay but retaining the duty on cotton consumed locally, provided Government gave the Corporation a share of the Entertainment Tax and the Stamp Duty on transfer of properties to compensate them for the loss of revenue. At the same time they made it clear to Government that what they had stated were their own views and not binding on the Corporation and that they would report what transpired at the conference to the Corporation for final decision.

It is heartening that Government have agreed to give the suggestions their best consideration.

Amidst the rancour of the relief to Bengal, all eyes here are turned on Lord Brabourne, who is fully posted with facts, but who has, nonetheless, a most delicate task to accomplish at Delhi, for far more than the finances of the Bombay Government or Bombay Corporation are now involved.

Another matter of intimate interest to Bombay which Lord Brabourne might have to take up with the Government of India is the state of cotton export trade resulting from a number of galling restrictions which the Japanese have put upon it. It is now found that the serious apprehensions, which were expressed in *Indian Finance* in the same issue in which the merits of the Indo-Japanese trade agreemet were examined, are all coming too true. The Japanese have attempted, while ostensibly lifting the boycott of Indian cotton, to ensure that the Indian exporters do not get the better of the Japanese firms trading in India and also to tighten the grip of Japanese interests over the entire export trade in Indian cotton. It is possible that the whole thing started with the anxiety of the Japanese to see that justice was done to the Japanese firms which exoprt Indian cotton and which had, at great sacrifice to themselves, given the Japanese spinners the fullest co-operation in bringing about the effective boycott of the Indian cotton. It would appear that, during the period of the boycott, the Japanese firms had nearly wound up their buying agencies in India and that the Indian exporters had made an intelligent anticipation of the ultimate event of the Indo-Japanese trade agreement and the lifting of the boycott and acquired large stocks which they were ready to export as soon as conditions permitted. The Japanese were, therefore, anxious that the Indian merchants should not be allowed to steal a march over the Japanese competitors.

This would have been not quite indefensible ; but the Japan Cotton Merchants Union and the Japan Cotton Spinners' Association have gone much further and have by means of a number of new regulations nearly elbowed the Indians out of the export trade in raw cotton.

The effects of these regulations leave no room for doubt. In the first place, a highly unfair advantage had been sought to be given to the three Japanese firms which are engaged in the export of raw cotton from India. Secondly, the freight space has been, so to say, cornered and free competition between Indian and Japanese merchants eliminated. Thirdly, the amount of permissible export during the busy season of the year has been fixed so low that prices must inevitably sag under the growing pressure of cotton moving from upcountry to the ports.

Mr. Haridas Madhavdas, President of the East India Cotton Association, pointed out, only the other day, that 550,000 bales have been fixed as the maximum export to Japan during the first four months of the calendar year by which time nearly half the Indian cotton crop (2½ million bales) usually reached the market. It is clear that the Indian merchants in Bombay and in Japan will be hard-hit by the regulations of the Japanese associations. It is understood that protests have been lodged to the Minister of Commerce and Industry at Tokio and also with the Commerce Member at Delhi.

Leaving aside the harm done to the trading interests, matters of far more serious national concern are involved in this. Firstly, the regulations of the Japanese associations imply a serious breach of the observance of the spirit, if not of the letter, of the Indo-Japanese agreement. Secondly, even if no such question were involved, the Government of India cannot afford to view, with equanimity, the manner in which the prices of Indian raw cotton are beaten down to deadlow levels. As Mr. Haridas Madhavdas points out, the latest action of Japan is a knock-out blow to the Indian agriculturist in his present condition.

"WATCHMAN"

OLYMPUS

(From Our Correspondent)

New Delhi, March 6.

The annual group photograph of the Assembly was taken to-day in the Assembly Sector. It gained importance as Sir George Schuster and Sir B. L. Mitter will no longer figure in the next year's group. Intimation had been sent long ago so that quite a large number of Members appeared in time. Mr. Sarma was in Delhi but kept out. He said that he had always had objection to sitting in these groups and had never done so. Retorted a friend, "But we had kept a front seat for you." How much Mr. Yamin Khan wished that seat had been his! He looked all round for a chair but none was available. The fact that he had ceased to be a party leader dawned on him more painfully to-day than ever before.

* * *

Sir George Schuster looked happy in this setting. But he told the Council of State yesterday that he liked speaking to them for a happy "change in atmosphere." Only two Members of the Assembly heard him say so and communicated this to the lobby. There was a suggestion that some one should refer to it in the House this week and ask the Finance Member to explain himself. One Member proposed that they should ask him to resign from the House and become a Member of the Upper House!

* * * *

I do not think Sir George made the remark as a reflection on the Assembly. Perhaps he meant that the Council of State work was less strenuous and who would not wish for an autocratic setting if he can get it! After all, for all his love of speaking, Sir George, too, feels the strain of work in the Assembly where he has to answer the Opposition.

* * *

In the Council of State, they have a convenient method of dealing with long debates. Sir Henry Moncrieff-Smith used to call only those who would "catch his eye" and he shut his eyes at 3 o'clock. So the debate inevitably concluded. Sir Maneckji Dadabhoy is more liberal. He thinks every one has a right to catch the eye, and, as all cannot be given a chance to speak, he tells those who cannot speak to hand over their written speeches. They are taken as read and go into the Hansard! Considering that, in the Assembly, Sir Shanmukham Chetty has put a strict ban on Members even altering their speeches to make them more gramatical and less irresponsible or defamatory, it is a matter for considerable parliamentary controversy as to whether the practice of taking speeches as read can be held to be justified.

* * *

Especially is this point of interest as the Upper House tries to challenge comparison with the Assembly. For instance, the Members of the Council of State felt very pleased when they heard that their President was giving a Council dinner to the Viceroy following the practice started by Sir Shanmukham in Simla last summer. Sir Maneckji made a not less politically-coloured speech and he spoke at no lesser length. The Viceroy spoke *ex-tempore* as he did on the occasion of the Assembly dinner and the two Houses seem like running a race in this respect.

Again, when you consider that the new constitution grants larger powers to the Upper House over the budget, it becomes a matter of some importance whether, in the question of parliamentary practice and the regulation of debates, the two Houses should not have uniformly of procedure.

* * *

The Budget debates which are now proceeding here hardly promise any further light on the subjects dealt with by the Finance Member. Even when Members make original points, as Mr. Ramaswamy Mudaliar did on the army, the Government spokesmen evade the question and count on the votes they have in their secure control.

* * *

Yet some results must accrue. These concern the European and Anglo-Indian interests. The only party in the House which gets a hearing is the European group. They discuss matters beforehand with the authorities concerned and know what answer they will get. Sir Henry Gidney is assured already that British nurses will be replaced by Anglo-Indian nurses and that the R. A. M. C. officers' work will to some extent be entrusted hereafter to Anglo-Indians in the I. M. D. That is a solid victory for the Colonel for his community. Again, when Mr. Tottenham defended the employment of Anglo-Indian girls on higher pay in the Army departments on the ground of their being more efficient in certain classes of work than Indian masculines, Colonel Gidney was very happy.

* * *

The European group is working for a bigger issue. They want a change in the present distribution of portfolios. A Member for Transport and a Member for Commerce and Industry. The distribution of portfolios is entirely in the charge of the Viceroy and no constitutional difficulties arise so long as three of the members have been in the service of the Crown for 10 years.

The Viceroy will discuss this matter with the Secretary of State during his leave and most probably a change will be made in the Autumn. The question of creating a non-official Army Member is also seriously before the Government and when the redistribution of portfolios takes place, there may be found a place for such a member in the reorganized cabinet.

* * *

Next comes the question of planned economy. Sir George Schuster has asked every body who talks on the subject to submit a note to him. Some commercial leaders have already done so and others may do it shortly. The idea seems to be that a sort of economic advisory council be created for planning industrial progress of India on such lines as would give India her chance in co-operation with U. K. so that the British people may buy more from India and India may buy her requirements more from U. K. than from any other country. It will be called a Trade Agreement but the purpose would be to secure through commercial goodwill what the Britishers could secure hitherto through political influences.

* * *

Sir Percy Grigg is already receiving his direction in these matters in London and I am told he will come out with plans roughly discussed on the subject of better trade relationship between India and England.

SOUTH INDIA

(From Our Correspondent)

Madras, March 7.

Rarely has South India been stirred so deeply as over this question of the imports of rice from Siam and Indo-China. Japanese dumping created a flutter sometime ago ; but it was short-lived ; and as soon as it was learned that the Japanese Government agreed to use its good offices to stop a large consignment of rice for this country, the agitation died down and calm was restored. But not so in the present instance. All Madras is aflame ; and the various sections of the population are at one in thinking that the last straw on the camel's back is come. The newspapers have done their part in whipping up popular interest. The *Hindu* is as ever the ready recipient of all correspondence, regardless of length or grammar or even sense. The *Madras Mail* features the photographs of Japanese steamers unloading the hated cargo from Siam in the Madras docks.

The representatives of Madras in the Central Legislature have fallen into line with those from the other provinces, making a hue and cry about neglect of their own and favouritism to others. The speeches and the replies of the Government spokesmen are given every prominence ; and the cause is further strengthened by leaderettes.

Outsiders may find it difficult to imagine the effect of these on the psychology of the public in this province. For, frankly, that is one of panic. And the reason is that the staple product of South India is clearly unmarketable. Rice has no price, no buyer, though, of course, hungry men, there are in plenty to acept it in generous handfuls. Such a position should not be difficult to understand, if it is remembered that, owing to the developments of the last decade, rice has practically ceased to be an object of international trade. Time was when rice exports from India accounted for as much as Rs. 26 crores in India's balance sheet of foreign trade. But now they have dwindled to about 14 crores and odd in 1932-33. And not only that, the production of rice in the world has expanded. The Mediterranean sea-board and the lands under the political control of Japan have all developed their rice fields ; and foreign markets have been permanently lost to us in great part.

Though Burmah is the chief loser, South India has felt the impact of these changes in lower prices. Another important difference between rice and other agricultural commodities is that none of the great Powers is interested in rice ; with the result that the advantage, which might accrue from international schemes of restriction or other regulation of production or export, are denied to rice. Thus it stands to reason that the present disorganised condition of the rice trade might well survive the depression, which already shows signs of lifting. So far as South India is concerned, the tremendous drop in the price of rice has so disorganised economic society, that it will be some time before even an appreciable rise in prices could bring about a readjustment. What with Government insisting on its pound of flesh and export markets sealed aparently for ever, the spectacle of imports of rice from abroad is regarded, as I said already, as the veritable last straw on the camel's back.

It is strange that, in spite of the public interest in this question, the real economic issues arising from the import of Siamese rice have not yet been clarified. There is, no doubt, a *prima facie* case against foreign imports being kept out, while local prices hardly cover the cost of production and godowns are bursting with unsaleable stocks. But it is necessary at the same time that the exact extent of the danger contained in the imports of Siamese rice should be ascertained. And in this, the public has yet had no lead worth mention. In a letter published in the *Hindu* of March 2, a number of merchants, presumably, importers of Siamese rice, have urged that the danger of the imports from Siam and Indo-China has been exaggerated out of all proportion to the reality. They point out that the imported product does not enter directly into competition with locally produced rice ; that it is largely broken rice intended for the consumption of the lowest classes who make their *kanji* out of it and who, in the best conditions imaginable, cannot afford the higher qualities that are alone produced within the country. It would follow from this that to prohibit imports from Siam or to increase their price by a high import duty would not only be unnecessary in the interests of local rice but would have the positively harmful effect of imposing a needless burden on the poorest classes of the country.

The Secretary of the Rice and Grain Merchants' Association, Madras, has shown commendable promptness in publishing in the columns of the *Hindu* a rejoinder to the statement made by the importers. But the reply of the Rice and Grain Merchants' Association is totally devoid of any reasoning or any helpful statement of facts. It opens with a reiteration of the crudest mercantilism, namely, that every export is a gain to the national wealth and "whatever we import, from a pin to a locomotive, is a loss to the nation." And what follows is a painfully futile attempt at rhetorical flourish. And if the case for the stoppage of Siamese rice were to rest on the communication of the Rice and Grain Merchants' Association, it would be a lost cause, indeed!

In spite of the failure of the interests, it is not difficult to see the facts clearly. That the imports are only of broken rice, which does not enter into competition with the internal product, is not denied and might, therefore, be taken for granted. But as was urged by Mr. Ramaswamy Mudaliar in the Legislative Assembly and conceded by Mr. Bajpai speaking for the Government, the danger of the imports must be judged, not from their volume, but from their psychological effect on the markets. There is no doubt that the markets have been thoroughly demoralised, especially in and about the principal ports. And potentially, too, the imports might be deemed dangerous. And, after all, there is no point in allowing these imports when the country has large stocks of virtually unsaleable rice.

The only consideration, therefore, in dealing with the question of the partial or total prohibition of the imports from Siam is that any action that might be taken in this regard might tend to deprive India of her markets in Indo-China and Siam. Much has been made of the value of the Siamese market to India ; but in a statement issued by Mr. Ramaswamy Mudaliar at New Delhi, it has been made clear that India's exports to Siam consist largely of opium and gunny bags, two commodities in which India enjoys a monopoly. If for any reason the exports of opium to Siam should be stopped, it is only a matter for satisfaction from all standpoints. And as for gunny bags, Siam can hardly afford to boycott India.

Thus, considered on its merits, the question should admit of the obvious and easy solution of prohibitive import duties. But it is learned that the Government are worried about this question, because action on the lines indicated might involve a breach of the friendly relations that have subsisted between the French and the British. Few Indians can feel any sympathy with this attitude of the British Government, as the idea of stabilising Anglo-French good will at the cost of the livelihood of millions of people in this country is too ridiculous even to call for a momentary reflection. There are, however, treaty relations between India and Siam and Indo-China ; and it is certain that the Government will not act in any precipitate manner.

THE CENTRAL BANK OF INDIA, LIMITED.

(Registered on 21st December, 1911.)

Thirty-ninth Report of the Board of Directors.

GENTLEMEN,

The Directors beg to place before the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1933.

	Rs.	A.	P.
The Net Profit for the year ended 31st December, 1933, including the sum of Rs. 3,56,027-6-3 brought forward from the last year's account, amounts to	18,24,616	8	0
An Ad-interim Dividend was paid for the half-year ended 30th June, 1933, at the rate of 6 per cent. per annum, free of Income-Tax, on 672,528 Shares absorbing	5,04,396	0	0
Amount transferred to Sinking Funds in respect of Lands and Buildings	2,00,000	0	0
Amount provided for Income-Tax and Super-Tax	50,000	0	0
The Balance of Rs. 10,70,220-8-0 the Directors now propose to dispose of as follows:—			
To pay a final Dividend for the half-year ended 31st Dec., 1933, at the rate of 6 per cent. per annum, free of Income-Tax, *i.e.*, annas twelve per Share on 672,528 Shares, which will utilize	5,04,396	0	0
To carry forward to next year's account	5,65,824	8	0
Total Rs. ...	18,24,616	8	0

The Bank's Deposits show a further improvement and at present amount to over Rupees Twenty-two Crores.

During the year under review new Branches were opened at Aurangabad, Cawnpore, Latur, Raichur and Warangal.

Two of your Directors, Nawab Sir Akbar Hydari and Mr. Sheriff Dewjee Canjee, retire under Article 94 of the Articles of Association. They are eligible for re-election and offer themselves accordingly.

You will be requested to appoint Auditors for the ensuing year and to fix their remuneration.

Indian Finance

MONTHLY REVIEW OF TRADE AND FINANCE

JANUARY 1934.

The New Year has opened with a marked setback in India's foreign trade. Reviewing our foreign trade for the month of November, we remarked that the improvement of the first half of the year had continued during that month, but that the incipient trade revival had not strengthened itself appreciably. Our caution in interpreting the trends of trade would seem to have been amply justified. Total exports show a steady fall from Rs. 13,19 lakhs in November to Rs. 11,86 lakhs in December and to Rs. 11,65 lakhs during the month under review. And what is more, imports, though they fell during December, have again risen, and risen by great proportions. The result is seen in the progressive decline of the balance of trade in merchandise from Rs. 3,18 lakhs in November, 1933 to Rs. 2,18 lakhs in December, 1933 and Rs. 1,98 lakhs in January, 1934. Thus the first month of the New Year has a depressing tale to tell, as regards India's foreign trade with decreases in exports and re-exports and increase in import trade.

It is hardly comforting to be told that the total visible balance of trade has marked increases over the previous two months, being Rs. 1,30 lakhs more than November and Rs. 1,83 lakhs more than December. For it shows only the flow of distress gold from this country in increasing measure. Only the ten months' figures show fall in import and increase in exports and re-exports compared with the ten months of 1932-33. While imports mark a decline of Rs. 16,53 lakhs, exports and re-exports are on the upgrade, being Rs. 11,59 lakhs and Rs. 13 lakhs more than the ten months of 1932-33. This is the result of the incipient trade revival of the second-half of the year and should not be mistaken with the present tendency of our exports and imports to help to narrow down our balance of trade in merchandise.

STATISTICAL DATA FOR JANUARY, 1934

	Jan. 1934	Dec. 1933	Jan. 1933
FOREIGN AND SEABORNE TRADE :—

*Weekly Average Returns.

The trade returns of British India for the month of January, 1934, as compared with preceding month, showed an increase in the value of imports while exports and re-exports recorded decreases. The value of imports of private merchandise totalled Rs. 10,67 lakhs, an increase of Rs. 1,49 lakhs as compared with the preceding month. The exports of Indian produce and manufactures fell by Rs. 18 lakhs from Rs. 11,57 lakhs in December, 1933, to Rs. 11,39 lakhs in the month under report. Re-exports also recorded a decrease of Rs. 3 lakhs and amounted to Rs. 26 lakhs.

Treasure on private account, including currency notes, showed a net export of Rs. 5,90 lakhs in January, 1934 as against Rs. 2,27 lakhs in the preceding month and Rs. 4,62 lakhs in January, 1933.

Measured by the statistics of merchandise and treasure, the total visible balance of trade in January, 1934 was Rs. 6,89 lakhs in favour of India as compared with Rs. 5,06 lakhs in December, 1933 and Rs. 5,72 lakhs in January, 1933. During the ten months ending January, 1934 the visible balance of trade in merchandise and treasure was Rs. 68,35 lakhs in favour of India compared with Rs. 53,46 lakhs in the corresponding period of the preceding year. The balance of remittances of funds in January, 1934 was *minus* Rs. 10,22 lakhs and in the ten months April, 1933 to January, 1934 was *minus* Rs. 39,38 lakhs.

As compared with January, 1933, the imports of food, drink and tobacco in January, 1934 decreased by Rs. 7 lakhs to Rs. 1,31 lakhs, imports of raw materials by Rs. 20 lakhs to Rs. 1,33 lakhs, while those of manufactured articles advanced by Rs. 24 lakhs to Rs. 7,75 lakhs. Under food, drink and tobacco, imports of sugar 16 D.S. and above (including beet) declined from 39,000 tons valued at Rs. 43 lakhs to 26,000 tons valued at Rs. 26 lakhs. Arrivals of raw tobacco improved from 930,000 lbs. valued at Rs. 9½ lakhs to 1,317,000 lbs. valued at Rs. 13 lakhs. Under provisions and oilman's stores there was an increase of Rs. 1 lakh due chiefly to larger imports of biscuits and cakes and condensed milk. Arrivals of rice not in the husk recorded an increase having amounted to 20,000 tons Rs. 11⅓ lakhs) as compared with 5,000 tons (Rs. 4 lakhs) in January, 1933. Under raw materials, the imports of kerosene oil declined by 1.3 million gallons in quantity and by Rs. 4 lakhs in value. Imports of mineral oils other than kerosene dropped by 4.6 million gallons and Rs. 9 lakhs and stood at 9.2 million gallons valued at Rs. 30 lakhs. Imports of coconut oil declined by 242,000 gallons in quantity and by Rs. 4 lakhs in value. Raw cotton (chiefly imported from Kenya Colony, Tanganyika Territory, Egypt and the United States of America) recorded a decline of 250 tons in quantity and of Rs. 5 lakhs in value. Under manufactured articles, imports of cotton yarn and manufactures decreased by Rs. 53 lakhs. The imports of twist and yarn fell from 3.8 million lbs. to 2.6 million lbs. in quantity and from Rs. 31 lakhs to Rs. 22 lakhs in value. Under cotton piecegoods, imports of grey goods fell from 31 million yards valued at Rs. 45 lakhs to 12 million yards valued at Rs. 18 lakhs and those of white and coloured goods from 29 and 30 million yards valued at Rs. 51 lakhs and Rs. 60 lakhs to 21 and 24 million yards valued at Rs. 41 lakhs and Rs. 50 lakhs respectively. Under iron and steel there was an improvement of Rs. 16 lakhs, due mainly to an increase under sheets and plates and steel bars. Imports of machinery and mill-work recorded an advance of Rs. 24 lakhs, due mainly to larger arrivals of electrical machinery and boilers. The number of motor cars imported amounted to 753 and that of motor lorries, buses and vans to 357. The value of motor cars imported in January, 1934 amounted to Rs. 15 lakhs and that of motor lorries, buses and vans to Rs. 4 lakhs. There were noticeable increases under cutlery, hardware, implements and instruments (+Rs. 8 lakhs), wrought copper (+Rs. 6 lakhs) and dyes obtained from coal tar (+Rs. lakhs) while there were decreases under piecegoods of cotton and artificial silk (−Rs. 12 lakhs and silk manufactures (−Rs. 5 lakhs).

*Monthly average returns.

Compared with January, 1933, exports of food, drink and tobacco in January, 1934 rose by Rs. 38 lakhs to Rs. 2,56 lakhs. Shipments of rice, not in the husk, increased in quantity from 68,000 tons to 77,000 tons but the value thereof declined slightly from Rs. 52 lakhs to Rs. 51 lakhs. The exports of tea dropped from 29 million lbs. to 25 million lbs. in quantity but the value rose from Rs. 1,27 lakhs to Rs. 1,64 lakhs. Shipments of tobacco unmanufactured rose from about 1 million lbs. valued at Rs. 3 lakhs to 1.8 million lbs. valued at Rs. 5 lakhs. Exports of coffee advanced from 6,000 cwts. (Rs. 4 lakhs) to 12,000 cwts. (Rs. 6 lakhs). Raw materials and produce exported declined by Rs. 63 lakhs to Rs. 5,56 lakhs. Under this group raw cotton recorded a decrease of 4,000 tons in quantity and of Rs. 49 lakhs in value. Of the total shipments of 43,400 tons, Japan took 11,700 tons, the United Kingdom 7,300 tons, China 6,100 tons, Italy 5,000 tons, Germany 4,400 tons, France 3,100 tons, Belgium 2,000 tons, Spain 1,000 tons, the Netherlands 900 tons and Greece 500 tons, the remainder being despatched mainly to French Indo-China and the United States of America. Consignments of raw jute increased from 63,000 tons to 66,000 tons in quantity but the value fell from Rs. 1,02 lakhs to Rs. 91 lakhs. Exports of lac improved by 53,000 cwts. to 84, 000 cwts. in quantity and by Rs. 21 lakhs to Rs. 31 lakhs in value. Shipments of oilseeds declined from 79,000 tons valued at Rs. 1,17 lakhs to 60,000 tons valued at Rs. 66 lakhs. Despatches of groundnuts fell from 62,000 tons to 34,000 tons in quantity and from Rs. 92 lakhs to Rs. 35 lakhs in value. Linseed advanced considerably from 5,000 tons (Rs. 6 lakhs) to 18,000 tons (Rs. 21 lakhs). Castor seed dropped from 7,000 tons valued at Rs. 10 lakhs to 2,000 tons valued at Rs. 2 lakhs. Shipments of raw wool advanced from 3.8 million lbs. valued at Rs. 13 lakhs to 7.4 million lbs. valued at Rs. 25 lakhs. Exports of raw hides and skins rose by 1,300 tons in quantity and by Rs. 8 lakhs in value. Exports of wolfram ore rose from 300 tons to 500 tons in quantity and from Rs. 4 lakhs to Rs. 7½ lakhs in value. Exports of raw rubber recorded an improvement of 2.7 million lbs. in quantity and of Rs. 6 lakhs in value. Manufactured goods improved by Rs. 26 lakhs to Rs. 3,19 lakhs. The yardage of gunny cloth exported increased from 74 millions to 84 millions and in value from Rs. 78 lakhs to Rs. 91 lakhs. The number of jute bags shipped contracted from 29 millions worth Rs. 83 lakhs to 26 millions worth Rs. 60 lakhs. Exports of tanned hides and skins rose by 700 tons in quantity and by Rs. 16 lakhs in value. There was a decline of Rs. 10 lakhs in the exports of cotton yarn and manufactures. While lead pig and paraffin wax recorded an improvement of Rs. 6 lakhs each.

The share of the United Kingdom in the imports rose from 37 per cent. in January, 1933 to 41 per cent. in January, 1934, and in exports from 26 to 36 per cent. The shares of Germany, Japan and the United states in the month under report were 9, 14 and 8 per cent. respectively under imports, and 6,7 and 10 per cent. under exports.

The tonnage of vessels entered into British India and cleared outward with cargoes from and to foreign countries and British possessions during the month of January, 1934, amounted respectively to 644,000 and 620,000 as against 652,000 and 673,000 in December, 1933, and 656,000 and 548,000 a year age. During the ten months ending January, 1934, the tonnage of vessels entered and cleared with cargoes amounted respectively to 6,043,000 and 6,338,000 as compared with 5,791,000 and 5,912,000 in the corresponding period of the preceding year.

U. S. GOLD RESERVE ACT OF 1934

FULL TEXT OF MR. ROOSEVELT'S PROCLAMATION

(Concluded from last week's issue).

"Notwithstanding the provisions of the foregoing paragraph, the Secretary of the Treasury may from time to time, when he deems it to be in the public interest, offer such bonds otherwise than as a popular loan, and he may make allotments in full, or reject or reduce allotments upon any applications whether or not the offering was made as a popular loan."

(2) By inserting in Section 8 (U.S.C., Title 31, Section 771), after the words "certificates of indebtedness," a comma and the words "Treasury Bills."

(3) By striking out the figures "$7,500,000,000" where they appear in Section 18 (U. S. C., Title 31, Section 753) and inserting in lieu thereof the figures "$10,000,000,000."

(4) By adding thereto two new sections, as follows:

"Section 19. Notwithstanding any other provisions of law, any obligations authorised by this Act may be issued for the purchase, redemption, or refunding, at or before maturity, of any outstanding bonds, notes, certificates of indebtedness, or Treasury bills, of the United States, or to obtain funds for such purchase, redemption or refunding, under such rules, regulations, terms, and conditions as the Secretary of the Treasury may prescribe.

"Section 20. The Secretary of the Treasury may issue any obligations authorized by this Act and maturing not more than one year from the date of their issue on a discount basis and payable at maturity without interest. Any such obligations may also be offered for sale on competitive basis under such regulations and upon such terms and conditions as the Secretary of the Treasury may prescribe, and the decisions of the Secretary in respect of any issue shall be final."

(*b*) Section 6 of the Victory Liberty Loan Act (U. S. C., Title 31, Section 767; Supp. VII, Title 31, Section 767-767a) is amended by striking out the words "for refunding purposes" together with the preceding comma, at the end of the first sentence of subsection (*a*).

(*c*) The Secretary of the Treasury is authorised to issue gold certificates in such form and in such denominations, as he may determine, against any gold held by the Treasurer of the United States, except the gold fund held as a reserve for any United States notes and Treasury notes of 1890. The amount of gold certificates issued and outstanding shall at no time exceed the values at the legal standard, of the gold so held against gold certificates.

Section 15. As used in this Act the term "United States" means the Government of the United States; the term "the Continental United States," means the States of the United States, the District of Columbia and the Territory of Alaska; the term "Currency of the United States" means currency which is legal tender in the United States, and includes United States notes, Treasury notes of 1890, gold certificates, silver certificates. Federal Reserve notes and circulating notes of Federal Reserve banks and National banking associations; and the term "person" means any individual, partnership, association or corporation, including the Federal Reserve Board, Federal Reserve banks and Federal Reserve agents. Wherever reference is made in this Act to equivalents as between dollars or currency of the United States and gold, one dollar or one dollar face amount of any currency of the United States equals such a number of grains of gold, nine-tenths fine, as at the time referred to, are contained in the standard unit of value, that is, so long as the President shall not have altered by proclamation the weight of the gold dollar under the authority of Section 43, Title III of the Act approved May 12, 1933, as heretofore and by this Act amended, 25-8-10 grains of gold 9-10 fine, and thereafter such a number of grains of gold, 9-10 fine, as the President shall have fixed under such authority.

Section 16. The right to alter, amend or repeal this Act is hereby expressly reserved. If any provision of this Act, or the application thereof to any person or circumstances, is held invalid, the remainder of the Act, and the application of such provision to other persons or circumstances, shall not be affected thereby.

Section 17. All Acts and parts of Acts inconsistent with any of the provisions of this Act are hereby repealed.

Approved, January 30, 1934.

Following is the text of President Roosevelt's Proclamation on January 31 revaluing the dollar at 59.06 Gold content reduced 15-5-21 Grains Nine-tenths Fine under the powers conferred upon him by the Gold Reserve Act.

Whereas, by virtue of Section 1 of the Act of Congress approved March 14, 1900 (31 Stat. L. 45), the present weight of the gold dollar is fixed at 25.8 grains of gold nine-tenths fine; and

Whereas, by Section 43, Title III, of the Act approved May 12, 1933 (Public No. 10, Seventy-third Congress), as amended by Section 12 of the Gold, Reserve Act of 1934, it is provided in part as follows:

"Wherever the President finds, upon investigation, that (1) the foreign commerce of the United States is adversely affected by reason of the depreciation in the value of the currency of any other government or governments in relation to the present standard value of gold, or (2) action under this section is necessary in order to regulate and maintain the parity of currency issues of the United States, or (3) an economic emergency requires an expansion of credit, or (4) an expansion of credit is necessary to secure by international agreement a stabilization at proper levels of the currencies of various governments, the President is authorized, in his discretion—

"(a) To direct the Secretary of the Treasury to enter into agreements with the several Federal Reserve banks and with Federal Reserve Board whereby the Federal Reserve Board will, and it is hereby authorised to, notwithstanding any provisions of law or rules and regulations to the contrary, permit such Reserve banks to agree that they will (1) conduct, pursuant to existing law, throughout specified periods, open market operations in obligations of the United States Government or corporations in which the United States is the majority stockholder, and (2) purchase directly and hold in portfolio for an agreed period or periods of time Treasury bills or other obligations of the United States Government in an aggregate sum of $3,000,000,000 in addition to those they may then hold, unless prior to the termination of such period or periods the Secretary shall consent to their sale. No suspension of reserve requirements of the Federal Reserve banks, under the terms of Section 11 (c) of the Federal Reserve Act, necessitated by reason of operations under this section, shall require the imposition of the graduated tax upon any deficiency in reserves as provided in said Section 11 (c). Nor shall it require any automatic increase in the rates of interest or discount charged by any Federal Reserve bank, as otherwise specified in that section. The Federal Reserve Board, with the approval of the Secretary of the Treasury, may require the Federal banks to take such action as may be necessary, in the judgment of the Board and of the Secretary of the Treasury, to prevent undue credit expansion.

"(b) If the Secretary, when directed by the President, is unable to secure the assent of the several Federal Reserve banks and the Federal Reserve Board to the agreements authorised in this section, or if operations under the above provisions prove to be inadequate to meet the purposes of this section, or if for any other reason additional measures are required in the judgment of the President to meet such purposes, then the President is authorised—

". . . (2) by proclamation, to fix the weight of the gold dollar in grains ninetenth fine and also to fix the weight of the silver dollar in grains nine-tenths fine at a definite fixed ratio in relation to the gold dollar at such amounts as he finds necessary from his investigation to stabilise domestic prices or to protect the foreign commerce against the adverse effect of depreciated foreign currencies, and to provide for the unlimited coinage of such gold and silver at the ratio so fixed, or in case the Government of the United States enters into an agreement with any government or governments under the terms of which the ratio between the value of gold and other currency issued by the United States and by any such government or governments is established, the President may fix the weight of the gold dollar in accordance with the ratio so agreed upon, and such gold dollar, the weight of which is so fixed, shall be the standard unit of value, and all forms of money issued or coined by the United States shall be maintained at a parity with this standard and it shall be the duty of the Secretary of the Treasury to maintain such parity, but in no event shall the weight of the gold dollar be fixed so as to reduce its present weight by more than 50 per centum. Nor shall the weight of the gold dollar be fixed in any event at more than 60 per centum of its present weight. The powers of the President specified in this paragraph shall be deemed to be separate, distinct and continuing powers, and may be exercised by him, from time to time, severally or together whenever and as the expressed objects of this section in his judgment may require; except that such powers shall expire two years after the date of enactment of the Gold Reserve Act of 1934 unless the President shall sooner declare the existing emergency ended, but the President may extend such period for not more than one additional year after such date by proclamation recognising the continuance of such emergency"; and

Whereas I find, upon investigation, that the foreign commerce of the United States is adversely affected by reason of the depreciation in the value of the currencies of other governments in relation to the present standard value of gold, and that an economic emergency requires an expansion of credit; and

Whereas, in my judgment, measures additional to those provided by Subsection (*a*) of said Section 43 are required to meet the purposes of such Section; and

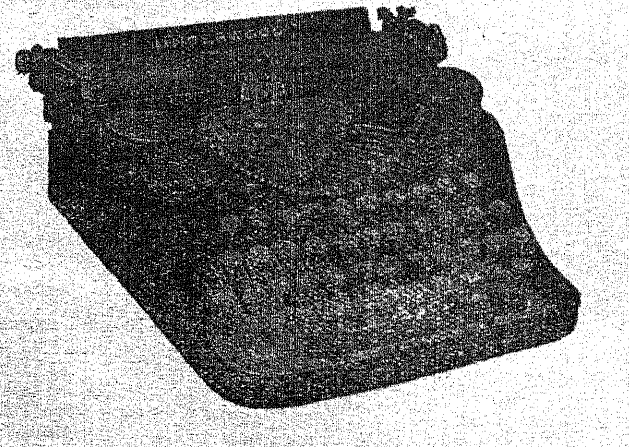
Whereas, I find, from my investigation, that, in order to stabilize domestic prices and to protect the foreign commerce against the adverse effect of depreciated foreign currencies, it is necessary to fix the weight of the gold dollar at 15-5-21 grains nine-tenths fine.

Now, therefore, be it known that I, Franklin D. Roosevelt, President of the United States, by virtue of the authority vested in me by Section 43, Title III of said Act of May 12, 1933, as amended, and by virtue of all other authority vested in me, do hereby proclaim, order, direct, declare and fix the weight of the gold dollar to be 15-5-21 grains nine-tenths fine, from and after the date and hour of this proclamation. The weight of the silver dollar is not altered or affected in any manner by reason of this proclamation.

This proclamation shall remain in force and effect until and unless repealed or modified by Act of Congress or by subsequent proclamation; and notice is hereby given that I reserve the right by virtue of the authority vested in me to alter or modify this proclamation as the interest of the United States may seem to require.

In witness whereof I have hereunto set my hand and have caused the seal of the United States to be affixed.

NOW!
You Can Afford
THIS PORTABLE TYPEWRITER
A FULL-FLEDGED PORTABLE IN EVERYTHING BUT PRICE



The newest member of the Underwood Portable Family. A genuine writing machine at the lowest price ever listed for a complete typewriter! Features available only in portable typewriters costing much more! Standard keyboard—42 keys writing 84 characters. . both capital and small letters . . shift lock . standard line spacer . . paper and carriage release levers . . shift key . . quiet key and carriage action . . nickel plated metal parts . . lustrous black crinkle finish.

AUDITOR'S REPORT.

I beg to report that I have examined the above Balance Sheet of the Travancore National Bank, Limited, as at 31st December, 1933, with the Books and vouchers of the Head Office and the certified returns from the Branches and have obtained all the information and explanations I have required. In my opinion such Balance Sheet is drawn up in conformity with the law so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of my information and the explanations given to me and as shown by the books of the Bank.

GREAT BRITAIN

The Board of Trade Statistics: The Anglo-Soviet Trade Treaty: The British Industries Fair: The Trade Tangle with France: Budget Prospects: Anglo-Japanese Textile Talks.

A Study of Statistics:

From the study of a fossil bone an expert is said to be able, mentally, to reconstruct a picture of the mammoth that roamed the prehistoric forests. To a student of economics, it must be a pleasant exercise to evolve, out of a country's financial and trade statistics, a complete story of the nation's struggle in the economic world. Nor is it a purely academic pleasure. For, the conclusions of the student can always be checked by reference to facts within his own experience and future financial policies can be formulated in the light of the lessons learnt.

The Board of Trade have compiled statistical tables in connection with the Overseas trade of Great Britain, and the estimated balance of payments, which throw a flood of light on contemporary economic history.

The story of momentous upheavals is plainly written on the tables. We can trace the slow recovery of the United States from the economic cataclysm which had overtaken her. The story of the Anglo-Soviet breach is apparent in the figures for Russia. The drop in the trade figures for the Irish Free State tell their own tale. The Imperial Preferences are seen to be at work in the Empire countries. The growing self-sufficiency of Japan is seen in the diminishing exports to that country.

Reviewing the tables of statistics as a whole, it would seem safe to conclude that artificial trade treaties and Empire preferences are hardly able to resist the more powerful causes of trade movements. Thus, the slight increase, namely £2,400,000, in the value of England's total exports would seem to be due chiefly to the brighter outlook in South Africa and America.. The large reduction of £25.8 millions in imports is wholly at the cost of foreign countries. England cannot hope to gain from Ottawa and other trade treaties what she has lost through natural causes of trade depression.

Turning to the Table for the balance of payments of the United Kingdom, it should be remembered that these estimates are, at best, probable and that there are, therefore, wide limits of error for these figures. The system of compilation also is not free from blame. For example, whereas "excess of Government receipts from overseas" would appear to be on account of "capital" transactions, the rest of the items are on account of "revenue" transactions and the two should not have been brought together.

But taking the figures as representing approximate, but workable, estimates, the result would appear to be gratifying. The adverse balance of England, after taking all visible and invisible exports and imports into consideration, is only £4 million. This is an improvement of nearly £50 million over 1932 and £100 million over 1931. As the adverse visible trade balance for the year is £264,000,000, it would appear that England received from "invisibles an income" of approximately £260,000,000.

The import of gold during 1933 bears, however, no relation to the adverse balance struck above. Gold to the value of nearly £196 millions flowed into England in 1933. A large portion of this was probably sent to England for safe deposit from abroad, and the balance probably represents short-term capital which England, with her greater reputation for solidarity and steadiness, attracted from foreign countries where the people had but waning faith in the stability of their currencies.

Anglo-Russian Trade Agreement:

The Anglo-Soviet trade agreement has been signed and awaits the ratification of Parliament. The provisions of the agreement are briefly as follows:

It provides for most-favoured-nation treatment; but each party has the right to represent to the other cases in which prices tend to frustrate schemes of preferences or injure the domestic production. Negotiations would follow, and if they failed, most-

PUBLICATIONS OF THE LEAGUE OF NATIONS

Just out WORLD ECONOMIC SURVEY, 1932-33

348 pages ... ... Price: bound in cloth Rs. 5 8 0

The Survey for 1932-33 begins with a description of the revival of economic activity in the autumn of 1932 after the Lausanne Conference and covers the period up till the close of the first session of the Monetary and Economic Conference at London twelve months later. The story is thus brought up to the end of July 1933.

As in the previous Survey adequate use is made of statistical information regarding prices, production, international trade, public finance, wages, employment, profits, etc. collected from all over the world by the Economic Intelligence Service of the League of Nations. Despite the wealth of material thus made available, the Survey, like its predecessor, is a clear and connected story of recent developments valuable to the specialist for its scope and accuracy, and equally to the layman because of its clarity.

The American banking crisis, the movement towards reduction of hours, the situation regarding international indebtedness, the magnitude of agricultural stocks compared with current production, the decline in international trade, the recent rise in prices and recovery of production, are among the subjects of topical interest surveyed in this volume.

WORLD PRODUCTION AND PRICES, 1925-32

155 pages ... ... Price: Rs. 2 12 0

This volume contains an analysis of the changes in the world output and stocks of raw materials and foodstuffs, in the world's industrial activity and, finally, of price movements and relationships. It includes the index number of world production of raw materials and foodstuffs calculated by the Economic Intelligence Service of the League and international index of industrial production, together with abundant statistical material, *e.g.*, national industrial production indices for some 20 countries, data comparing production of investment and consumers goods, and indices of activity of some 15 important groups of industry in a large number of countries.

The chapter on prices contains an analysis of the movement of wholesale prices in various groups of countries; comparisons are made between the evolution of gold and sterling prices, raw materials and finished products, international and domestic goods, investment and consumption goods, etc.

The chapters on production cover the years 1925-1932, and, where possible, the first quarter of 1933. The discussion of price movements has, where figures were available, been brought up to May, 1933.

Complete catalogue sent free on application.

favoured-nation treatment would, after three months, cease to apply to the goods in question.

A schedule attached to the Agreement lays it down that Soviet payments are to bear, in each year, an increasing ratio to Soviet proceeds, until, after a transitional period of four years, an approximate balance of payments is reached. The ratios cover certain "invisible" payments as well as "visible" trade.

British exports to Russia are made available for inclusion without discrimination under guaranteed credit schemes ; and goods from Empire countries other than self-governing dominions are included under the most-favoured-nation provisions, provided these countries do not discriminate against Russia.

Although bristling with safeguards and provisos, the Treaty succeeds in conveying the impression that the two countries are sincerely anxious to expand their trade with each other. Instead of squabbling about prestige and dignity, they have, therefore, set out to achieve the best result in a spirit of give and take. The wary and lukewarm manner, in which England began the negotiations, had chilled the hopes of those who wished to see these two great nations once more working towards mutual profit. But the result of the negotiations is certainly far in advance of expectations.

It has been argued that rigid and artificial arrangements regarding bilateral trade and attempts to balance that trade by this "barter" or "two-way traffic" plan are neither desirable nor practicable. Though the soundness of this argument is undeniable, it should be remembered that, in this instance, it has far more justification. Britain is committed to a policy of bilateral trade treaties ; and her experiences during 1933 are not such as to recommend its abandonment. As per Russia, not only is her foreign trade a monopoly of the State and the State is obliged to further it in the same way an individual exporter would, but her relations with the nations in the recent past call for special efforts to regain the export markets and other advantages of internatioal trade. Thus, whatever one might say of other bilateral trade treaties, the agreement that has now been concluded between Britain and Russia is to be widely welcomed as calculated to improve the trade between the two countries and, it may be hoped, set up widening ripples of prosperity in the world.

The British Industries Fair :

Holding exhibitions and fairs, from time to time, is a part of England's trade policy and the utility of these exhibitions is obvious. They not only stimulate trade but afford an opportunity to the public of appraising the nation's industrial progress. The first British Empire Exhibition at Wembly was a stronger fillip to Britain's internal, as well as, Overseas trade than a dozen trade agreements would have been.

The Fair, that opened in London and Birmingham simultaneously on February 19, bids fair to be one of the most successful on record. Large orders for British products have been recorded, the value of the trade transacted by midday of the 20th at Olympia reaching the handsome figure of £200,000. At Birmingham, where the heavy industries are exhibited, manufacturers of mining equipment are benefiting from the boom in the gold mine industry and from the extension of mining enterprise on the Rand and in other parts of the world. There is also a strong demand for brewing equipment from America, for armaments from the Balkans and for agriculture and coal mining machinery from the Argentina.

The Anglo-French Trade Tangle :

Speaking at a luncheon of the Glasgow Chamber of Commerce on February 22, Sir John Simon, the most—discussed Foreign Secretary of recent times, foreshadowed the ending of the unhappy trade tangle between England and France. "There is every prospect," he haid, "that negotiations are now going to be entered into with the goodwill of France and ourselves for new commercial arrangements."

France is believed to have expressed her willingness to consider negotiations for a new trade treaty on the basis of the present level of trade between the two countries. There will be quotas for British imports and a tariff of duties on French exports, more or less as they stand now, but *without* the bitter feelings behind them, and without the obnoxious surtax and turnover tax, which came very near to paralysing the entire trade between the two important nations. If a new trade treaty between France and England achieved nothing more than re-establish friendly feelings between the two nations, it will have achieved a great deal.

Budget Prospects :

It is refreshing in these days, when budgets have a habit of gathering increasing deficits from year to year, to turn to the closing of a financial year that is bound to show a satisfactory surplus for England. And when it is remembered that 1932-33 closed with a deficit of £32,280,000, one cannot pass over the prospect without pausing to congratulate those who are placed in charge of the finances of the nation.

The position towards the end of the third week in February was a deficit of £7,374,662 compared with a deficit of £84,524,881 at the same time last year. If revenue were approximately on par with last year, the year would close eventually with a surplus of about £45 millions. But one can point definitely to, at least, two causes why the revenue for the remaining period will fall below last year's figures. Income-tax receipts will be substantially less owing to the new system of tax-collection according to which the instalment payable during the last quarter, under certain schedules, is one-half instead of three quarters as in the previous year. This should mean a loss of revenue of about £7,000,000. Sur-tax receipts should also bring in about £5,000,000 less than last year. If we offset these by the legitimate expectations of an increase under other heads, such as, Customs, Excise, Stamps, Estate duties etc., receipts for the remaining period of the financial year should still be about £8,000,000 less than for the same period of 1932-33. There would, therefore, remain surplus of nearly £37,000,000.

Gratifying as the result appears, there are yet other tasks before the Chancellor of the Exchequer. To take 'sixpence off the income-tax,' to restore 'economy cuts,' these alone would absorb the entire surplus.

But signs are not wanting that the prospects of the coming financial year are even brighter than those of the present. There is every reason to hope that, owing to a discernible trade revival, the income-tax on net earnings of companies will show a substantial increase. Customs revenue should also go up for the same cause. Improvement in trade will again account for smaller expenditure by lessening unemployment. Those optimists who allow wish to be father to the thought are already having visions of an England freed from the burden of public debt and with no necessity of adding a penny to the bare minimum of an equitable taxation and with no obnoxious economy cuts and, above all, with no unemployment. But there is, unfortunately, often a great gulf between speculation and realisation, especially in national and international affairs.

Textile Talks with Japan:

The Anglo-Japanese Textile Conference is already, at the very outset, in deep waters. The British and the Japanese delegates have begun by disagreeing on the geographical area to be covered by the discussions. Britain wants an agreement with Japan in the world's cotton markets. Japan is prepared to discuss only if mutually profitable arrangements could be made for the markets in the British Isles and the Crown Colonies.

Both sides have quoted facts and figures in support of their respective attitudes. Japan, for instance, pleaded a greater density of population as an argument for her reluctance to discuss restrictions in world trade—she had so many more persons to the square mile to support. Great Britain pointed out that, while the density of population in the British Empire was less, that in the United Kingdom was more than in Japan. Japan next cited statistics to show that her export trade in gold dollars had declined steadily during 1930,1931 and 1932, and she naturally wanted to revive it in the world markets. Britain replied that, considered in yen, Japan's export trade during 1932 showed an increase on 1931 and Japanese exports of cotton piece-goods, in million square yards, during 1932 showed a substantial increase over those of the previous year. The Japanese delegates have asked for time for the purpose of obtaining instruction from home, and the Conference stands adjourned.

Although it is hoped that ways will be found for circumventing this initial difficulty, it is not an unlikely contingency that the Conference will break up over this "geographical areas" issue.

UNITED STATES OF AMERICA

Hostility to the Stock Exchange Regulations Bill: Market: Loan-issue.

The war between Wall Street and President Roosevelt is fought on two fronts. Mr. Whitney, the President of the New York Stock Exchange, is attempting to oppose the new legislation on scientific grounds while Mr. Gay would contest it in the events.

In his evidence before the House of Representatives Inter-State Finance Committee, the former voiced the protest of Wall Street against the stock-jobbing Bill. He pointed out that exchange operations, at a time of depression, help to ease a nation's credit and to resist an irretrievable slump by creating an artificial market for bonds and securities. He protested against the arbitrary marginal limits sought to be imposed on stock exchange transactions. The margin necessary should vary according to the prices of bonds traded and not be fixed at a rigid and arbitrary figure. He declared that the Bill's mandatory minimum margins "would force the liquidation of a substantial part of the $139,000,000 brokers' current debt balances, and also part of the $3,500,000,000 bank loans against securities." Mr. Whitney further pointed out the utility of "selling short" as a market stabiliser and generally resented the Bill which "gives the Federal Trade Commission complete control of the exchanges and puts all officers and members of the stock exchange at its mercy."

A legal aspect has been added to the struggle between Wall Street and the Federal Government by the stand taken by Mr. Thomas Gay, the Attorney for the New York Stock Exchange, that the constitutional validity of the proposed legislation is very doubtful, and is based on the assumption that the United States is possessed of a national, rather than a Federal, Government. According to Mr. Gay, the decisions of the Supreme Court support the view that only State Governments have jurisdiction over the exchanges operating within their borders.

Market:

The "Roosevelt Scare" has begun to have an effect on the market. On February 23, there was a marked decline in prices ranging from one to four points. The largest losses suffered were by motors, steels, rails and some metals. Aviation shares, however, rallied slightly and ended with a gain of one point.

Air Mail Week

The blizzard, earlier in the week, had the result of toning down activity on Wall Street.

The silver interests throughout the country are eagerly awaiting Mr. Roosevelt's lead in the matter of silver stabilisation. The advance in silver prices is said to be due to heavy purchases by India and China. It is urged by silver groups that the Government should purchase, at attractive prices, not merely all newly mined silver but all silver stocks held in the United States. There is considerable speculation regarding the probable Government attitude on silver ; a nationalisation of silver bullion and the prevention of private holders from obtaining a speculative profit are among the possibilities indicated.

Loan Issue:

Mr. Morgenthau, Secretary of the Treasury, announced, during the week, that an issue of long-term bonds was likely in March. The Treasury has already issued $75,000,000 in 182-day bills to replace the $100,000,000 91-day issue that has matured. This is a departure from the policy of increasing the amount of the maturing issue.

The Government's plans for floating new long-term loans by "unfreezing" the capital market is finding support with the bankers ; and there is considerable activity in the bond market. The New York Central 6 per cent. Convertible Bond issue was quoted at a 12-point premium and the latest Treasury note issue was 4½ times over-subscribed. The new State and Municipal issues were also well-received.

GERMANY

NEW STANDSTILL REPORT

A fuller report of the German Credit Agreement of 1934, to which only a passing reference was made in last week's review, is now available and the importance of some of the concessions should provide sufficient excuse for discussing the subject at some length. The Agreement arrived at forms an interesting document, not only because it summarises the latest credit position of Germany from a technical and economic point of view but also because it visualises a very optimistic future. The Committee are convinced that a direct and mutual settlement of their problems by discussion between both parties and through the medium of the Standstill Agreement constitutes the best method of dealing with the question of short-term debt, pending a return to more normal conditions. The creditors have ceased to view the problem merely with the idea of obtaining repayment of the loans ; they have come to take some real interest in the internal stability of the debtor nation.

The efforts of Germany to work out the Standstill Agreement during the past year to the best interests of both the debtors and creditors have been appreciated and the results obtained have been admitted to be highly satisfactory. Transfer difficulties are common, more or less, in all debtor countries, especially when they happen to be exporters of raw materials and foodstuffs to markets aided by a depreciated currency. But in the case of Germany the position is different ; for she depends mainly on her exports of finished products, while, at the same time, maintaining her currency at par with the other gold countries. While, as a debtor country should, enjoying the benefit of reduction in her debts due to depreciation of the foreign currencies, Germany, as an exporter, has to work against the advantages offered to the importing countries by depreciated currencies. Germany's experiments in currency inflation in the post-war period and the disastrous results thereof, are too recent to drive her to similar experiments however much she might wish to give a fillip to her exports as other major nations of the world have done. Determined as she is to maintain the internal stability of the Mark, contrary to the trend of events in other countries, and with a falling export trade, the debt position of Germany should

have revealed a condition far from satisfactory ; but it is, in fact, not so.

In July, 1930, the total amount of short-term banking indebtedness was estimated to be in the neighbourhood of Rm. 8,000 millions, and even before this was brought under the regulation of the first Standstill Agreement, which came into force in July 1931, it was reduced to Rm. 6,300 millions. The first year of the operation of the Agreement saw a further reduction in the volume of indebtedness to Rm. 5,000 millions. Under the second Agreement, on February 28, 1933, this was still further reduced to Rm. 3,850 millions. Now, when the third Standstill Agreement, which will extend upto February 28, 1935, and which has now been concluded, the total indebtedness is estimated to be about Rm. 2,600 millions, of which approximately Rm. 2,300 millions will have been availed of and the balance guaranteed by the Golddiskontbank.

It is, of course, true that this substantial reduction is due, partly, to export surplus and partly to depreciation in foreign currencies ; for it will be noted that the conversion of credits into registered marks has been progressing on a heavy scale and even by the end of December 1933, the figure reached Rm. 406 millions of which more than Rm. 300 millions have been released and disposed of. These registered marks disposed of at the end of the year and any additional amounts released since, have been sold by the creditors at a discount ranging between 15 to 30 per cent. and the indebtedness is reduced to that extent. Commenting on this position, the Report observes "that it is highly satisfactory and creditable to Germany's efforts that during a period of over three or four years her foreign short term banking indebtedness should have shown such an enormous reduction. If more normal conditions were to return in which free exchanges were possible, and if confidence were in consequence restored, Germany's existing short-term banking debt could not be considered at all beyond her capacity to support."

As regards a further reduction of indebtedness, the difficulties of the situation have been appreciat-movements, appears to be rather remote. There should be a sufficient exchange surplus for this purpose but that possibility, in view of the present trade movements, appears to be rather remate. There have been efforts, in the Transfer Moratorium, to improve the long-term debt position and the little surplus available is being utilised for the payments. The setting up of the so-called Konversionskasse machinery to meet the reduction of the Reichsbank's exchange resources is well-known. As early as June 1933, the creditors agreed to postpone capital payments, including Goldiskontbank instalments maturing between October 1, 1933, and February 28, 1934. In December 1933, a further reduction of transfer, in respect of interest, was agreed to, when the amount transferable in *devisen* was reduced from 50 per cent. to 30 per cent., with corresponding increases of the amount represented by the scrip from 50 per cent. to 70 per cent. As a result of the discussions during the latter part of January 1934, a slight modification has been effected according to which the Golddiskontbank has agreed to purchase the scrip, for the first six months of 1934, at the increased rate of 67 per cent., thus resulting in a total transfer in respect of 76.9 per cent. of the free value of the coupon. In view of these increased commitments, the Reichsbank has pointed out that it would be impossible to provide for any capital repayments. The position has been appreciated by the Creditors' Committee who decided to postpone the Golddiskontbank instalments for the present and to examine the position in July, 1934, again. For similar reasons, the Creditors' Committee have also decided not to insist on a further reduction of 5 per cent. in the credit lines now unavailed, for, in the event of any reduction being made, both individual financial centres and individual creditor firms must be treated alike, so that actual repayment, required by a further cut of 5 per cent., will necessitate a drain on the exchange resources of the Reichsbank reserve.

Though the Standstill creditors are making heavy sacrifices both as regards interest terms and capital, they have recognised that the maintenance of German foreign trade is absolutely dependent on international credit machinery and on the willingness of the creditors to extend credit facilities to Germany. As all foreign creditors are dependent upon German exports for the settlement of their loans and interests, it is in the interests of all to support this international credit machinery.

The position as regards the financing of Germany's import and export trade is interesting. The unavailed-of credit lines maintained under the German credit agreement, which amount to about Rm. 300 millions, will be utilised for the expansion of trade. But this facility should not be utilised for the creation of foreign exchanges or for financing of trade which could more appropriately be financed by local or inland credits. For, already, there is a certain amount of suspicion with regard to the character of the "additional exports" and the use of the unavailed-of lines for other than legitimate uses is sure to be resented by the creditors. At the same time, there is, unfortunately, no way of watching how this unavailed-of portion is being used up. Much depends upon the *bona fides* of the debtors. But the assurance given by the Germans that "unavailed-of credits will be used in accordance with the above declaration" dispels the sense of doubt and it remains to be seen that this undertaking is strictly implemented.

Another safeguard that the creditors have endeavoured to obtain for them is with regard to the

use of the registered marks and scrips for encouraging additional exports. A good deal of misapprehension has, of late, been current among the creditors in this connection. These exports are made possible by the fact that the German exporter can secure a market for his goods and balance an estimated loss on the transaction by a profit through the purchase of (1) German foreign bonds abroad with a view to their re-sale in Germany, (2) registered marks arising out of clause 10 of the Standstill Agreement, (3) scrip arising out of the settlement of long-term bondholders, and (4) the blocked marks. A German exporter, seeing that there is a chance of selling goods abroad at a price which would mean a loss to him in his own currency, obtains permission from the authorities to keep part of the foreign currency obtained by the sale of the goods and to realise it at a profit, instead of handing over the whole of it to the Reichsbank. The profit is secured by the purchase of the bonds as mentioned by the State organisation and by this method foreign exchange to the extent of 40 to 60 per cent. of the additional exports is added to the Reichsbank general stock of foreign exchange. The possibility of these transactions depends upon the fact that the price of German foreign bonds is higher in Germany than abroad and that the registered marks, scrips etc., can be bought from foreign holders at a discount and then disposed of in Germany at their face value as ordinary Reichsbank currency. Now, the point is that these additional exports are made possible only at the expense of the foreign creditors, in the case of bondholders, by the low price at which the German bonds are selling abroad and in the case of the creditors, by their having to sell their registered marks at a discount. The German exporter, on the other hand, points out that he has been creating a demand for these scrips and that there should not be any dissatisfaction at his using the exchange to the best advantage. These scrips would otherwise have remained unsaleable.

Irrespective of the merits or otherwise of the system, the effects of this plan have been noticeable. Exports are made feasible, which, in view of the depreciation of other currencies, would not otherwise be possible at all. Such additional exports provide for the Reichsbank only about 50 per cent. of the foreign exchange provided by normal exports and for this reason it should be in the interests of German authorities to control their use carefully. The Creditors' Committee have also recognised that "so long as it is carefully controlled by the German authorities and until currency relationship and price levels have been more permanently stabilised, it is in the interests of both parties that it should continue." Here again the German authorities have given a definite assurance that no German foreign bonds have been or are being bought out of the foreign exchange resources of the Reichsbank.

FRANCE

THE TASK BEFORE THE NEW MINISTRY.

Under the leadership of M. Doumergue, France is slowly settling down to a life of quietude. The political tension and the state of excitement, which just a few weeks back the city of Paris was in, have subsided and the common folk have begun to ply their daily trades with some confidence that a gov-

ernment has at last been formed— a government that is not merely a patch-work of leaders from the loosely-knit political organisations in France, but one which can govern, and means to govern. The Stavisky affair is being vigorously investigated; the English demand for a revision in the quota position has been answered with a stern denial and the initial step has also been taken by the abrogation of two important commercial treaties with England, to follow up her threats with determined action; equally assertive is the reply to the British Note on disarmaments. The signs of return to calm are also noticeable in the activities on the Stock Exchange. The Perpetual Three per cents, which had fallen below 64, are back again near 68; the 1918 War Fours have rallied from below 72 to over 76; Conversion Four and a Halfs of 1932, after dropping for the first time to 80, have now recovered to 82.

At the same time, a closer examination of the position reveals that all difficulties are not yet over for the new government; there are certain other problems which would yet prove hard nuts. Undoubetedly the most important is the Budget. Closely akin is the economic and the financial position of the country which has remained far from satisfactory. A deficit budget has just been rushed through the Parliament. Though the Finance Minister realised that the budget, as received by him from his predecessor, was nowhere near equilibrium, he presented it, much in the same form, merely because he had no time to tinker with it. With a deficit budget, the Ministry has to try other methods of financing the administration, if another fall of the Ministry were to be averted. Nor is the position of the Treasury more cheering. With the confidence of the people badly shaken in the administration, hoarding is on a marked increase and to bring out these hoards into use is the first task that the new government has set itself to. An attempt has been made to raise funds by loans. On the plea of having to advance to the Posts and Telegraphs administration, the Treasury has authorised an issue of a thirty-five year loan of 1,000 million francs in 5 per cent. bonds at 98½. The net yield is 5.73 per cent. which cannot be commended as cheap borrowing, especially at a time when all the countries are going through a systematic programme of conversion operations with a view to effect reduction in the service of national debt. The present issue also stands out in relief in comparison with the Conversion Loan of eighteen months ego, when the rate of interest was only 4½ per cent. We have to wait for more news to know how this issue is received.

The strength of the franc is also slowly declining. There are rumours, in reliable circles, of an impending international speculative attack on the franc. Though this is denied in other quaters as improbable, fears are expressed regarding the stability of the franc. There is also a talk of inflation to bring about an adjustment in the level of internal and external prices. The Minister of France, in one of his speeches during the last week-end, had remarked that monetary inflation alone was not enough to bring about an adjustment of prices, but, at the same time, is reported to have said that, if the budget could not be balanced, he might have to resort to inflation and monetary devaluation.

To inspire confidence in the government is thus to be the first need and, to effect this, there should be a firm control of the affairs of the State. The idea of the new ministry appears to be to furnish just this inspiration that a stable government has after all been formed. Judged from the results, this motive seems to explain the passage of the budget without any recasting, for it is repored that, with the present unsettled state of affairs, the Finance Minister did not want to make any experiments in taxation proposals, which, he was sure, would be unwelcome. The appeal to the market for funds through the new loan also lends support to this view. More than these, the ministry has proceeded to arm itself against any possible lack of support on the floor of the Chamber. Special powers have been granted to the Ministry, by a vote of the legislature, to enact reforms by decree up to the June 30, 1934. This shows that the Doumergue Ministry is determined to make a bold stand even in the face of an emergency. This firm action certainly marks the signal step towards the solution of many of the problems that are now facing the country; and if further measures are enacted in the same spirit of courage, the ministry would have justified its selection.

25 YEARS TEST

REVEALS THE BEST

Service: For over 25 years "The Indian Mercantile" has served the Indian Public with complete satisfaction.

"Dependable" is no exaggerated description of this indigenous concern which has at the time Assets exceeding three times its paid-up capital and has paid, with rare exceptions, handsome Dividends since its inception.

Life policies issued by this Company are scientific, up-to-date and designed to meet individual requirements at competitive rates of premium.

STATISTICAL INFORMATION

TRADE OF ADEN

The number of merchant vessels over 200 tons that used the Port of Aden in December, 1933, was 129 as compared with 124 in the corresponding month last year and the total tonnage was 569,000 as compared with 541,000.

Excluding coal, salt, fuel oil and military and naval stores and transhipment cargo, the total tonnage of imports in the month was 12,200 and of exports 6,700 as compared with 9,900 and 6,100 respectively for the corresponding month last year.

The total value of imports excluding Government stores was Rs. 42,29,000 as compared with Rs. 51,22,000 for December, 1932, and of exports Rs. 28,95,000 as compared with Rs. 33,56,000.

The total value of both imports and exports together was Rs. 71,24,000 as compared with Rs. 84,78,000 for the corresponding month last year.

Imports during the month were above those for December, 1932, in the case of grain, pulse and flour, gums and resins, hardware, hides raw, skins raw, sugar, twist and yarn, tobacco manufactured ; and below in the case of coffee, seeds, piecedoods grey, white and printed or dyed, tobacco unmanufactured and treasure private.

Exports were above those for December, 1932, in the case of grain, pulse and flour, gums and resins, hides raw, skins raw, sugar, twist and yarn; and below in the case of coffee, hardware, seeds, piece-goods grey, white, printed or dyed, tobacco unmanufactured and manufactured and treasure private.

TRAVANCORE EXPORTS.

The statements of export trade published by the Travancore Chamber of Commerce for the five months ending with 31st December, 1933, show that the export of cocoanut oil during 1933 was 1,835 cwts. as against 233 cwts. in 1932 and 8,448 cwts. in 1931. Calcutta and Bombay imported larger quantities in 1933. There was a steady increase in the exports of cocoanut, the figures for the past three years being 7,03,478 in 1931, 13,98,665 in 1932 and 15,22,260 in 1933. Bombay indented for more in 1933 and Karachi less. Coir yarn seems to be less in demand as will be seen from the fact that in 1931 the export was 1,45,769 cwts. as against 1,36,453 cwts, in 1932 and 1,32,940 cwts. in 1933. The tea market is still unfavourable. Though the quantity of tea exported went up from 3,75,770 lb. in 1931 to 5,02,056 lb. in 1932, the fall in 1933 was very striking, the actual quantity exported being only 99,169 lb. Rubber is still unsteady. 9,48,963 lb. in 1931, 2,38,891 lb. in 1932 which went up to 3,51, 955 lb. in 1933. Ceylon alone as usual imported more rubber. Travancore copra still holds its own in spite of Ceylon competition and enjoyed wider popularity. For in 1931 the quantity exported was 97,022 cwts. which rose to 1,12,319 cwts. in 1932 and again to 1,64,279 cwts. in 1933.

SUGAR

Calcutta, March 8.

The rise that was reported in the sugar market last week, due to the levy of surcharge at Re. 1 per maund on Indian Factory-produced sugar, is well maintained, although, the actual business passing has been small with more eagerness on the part of the sellers. Java sugar, due to arrive this month, is offered at the old price and unless movement of spot goods show an improvement, values are likely to decline gradually as the pressure for sale increases.

The condition in Bombay and Kathiawar markets is quite different. There were heavy stocks of Indian sugar in Bombay and, after the announcement of the duty, sellers have been very keen to sell off, with the result that, on the whole, prices are lower, Java prices not rising sufficiently to maintain the rise in the Indian sugar. The rise recorded in Kathiawar ports was 4 to 6 annas per maund and is well maintained at the moment.

The weakness in Bombay market was also due to the fact that "Nivas" is reported to have reduced its selling limit for superior sugar to West Coast India by 15 points to 4.10 guilders per 100 kilos and they are reported to have sold 10 thousand tons to exporters in Java at the reduced price.

In the New York Market there has been an increase by 4 to 5 points while London terminal has shown a decline of ¾d. to 1½d. due to March liquidation.

SHELLAC.

The market during the period under review has been quieter and prices are tending lower. The rise that took place in the shellac market during the past few months has been well maintained. In the meantime a very large quantity of shellac has been exported to London from Calcutta and there has been a scarcity at this end. But, it must be remembered that stocks in London, though in strong hands and well-backed financially, are very large and amount, in the usual course, according to the present requirement, to a year and a half's supply. As new operators are entering the market due to higher prices now ruling, it is desirable that they must be cautious in operating and know the real state of affairs. The rise has not been due to any real improvement in the trade of the commodity and higher prices may bring in more stock during the next season.

COMPANY REPORTS

REWA COALFIELDS, LD.

Extract from the Directors' Reports for the half-year ended 31st December, 1933:

	Rs.	A.	P.	Rs.	A.	P.
The working for the half year shows a gross Profit of				1,17,680	11	4
The amount brought forward from last half-year				9,222	4	3
making a total of				1,26,902	15	7
Depreciation	36,678	12	2			
Reserve for Taxation and Manager's Commission ...	20 681	3	0			
General Reserve ...	15,000	0	0			
				72,359	15	2
				54,543	0	5
There remains a balance of Rs. 54,543-0-5 which the directors recommended should be dealt with as follows:—						
In payment, on application, of Dividend of annas four per share, or at the rate of 5% per annum, free of income tax ...				33,750	0	0
Leaving to be carried forward ...				20,793	0	5

Whilst the demand for the half-year under review has been maintained, the general level of prices has declined.

Burhar Colliery is affected by competition from collieries in the neighbouring states from which coal of equivalent quality has been on offer at prices considerably below market rates.

Development—The extension of electrical pumping to No. 3 Incline was decided on during the half-year and the necessary equipment ordered. H. D. Townend, Janki Pasad, Brajendra Nath and E. L. Watts—Directors.

Shaw Wallace & Co.—Managing Agents.

MACNEILLS COAL COMPANIES.

Report and Accounts for the half-year ended 31st December 1933 of the above group which was published in these columns during the last week, provide satisfactory reading.

The results, in brief, are as follows:—

Name of Company	Profit or loss on Revenue Account	Credit or Debit Balance	Dividend per share	Carry forward
	Rs	Rs.	Rs.	Rs.
Aldih	49,887	25,400	Nil	25,400
Dhemo Main ...	53,816	25,663	Nil	25,663
Equitable ...	2,53,477	1,56,806	As. 8	44,306
Hurrilaldih ..	18,645	6,863	Nil	6,863
Mundulpur ...	1,760	10,685	Nil	10,685
West Jamuria ...	33,673	24,007	Nil	24,007

From the above table it is found that all the five Companies have made profits on Revenue Account and got credit balances. Except Equitable, which paid a dividend of annas 8 per share on ordinary shares. All other Companies have carried forward their credit balances to the next half-year. Equitable, after payment of Rs. 1,12,000 on account of Preference and ordinary dividends, has carried forward a sum of Rs. 44,306 to the next account.

BANSDEOPUR COAL CO., LTD.

Extract from the Directors' Report for the half-year ended 31st December, 1933:—

After bringing in the sum of Rs. 4,161-14-1 from the last account and providing a sum of Rs. 15,251-6-6 for Depreciation, the Profit and Loss Account shows a credit balance of Rs. 5,859-2-0.

It is proposed to carry forward this amount to next half-year.

W. T. Hunter, C. L. Phillips, P. H. Crete, E. L. Watts —Directors.

Jardine Skinner & Co.—Managing Agents.

Extracts from Director's Report:

Report for the year ending 31st December, 1933.

The net profit for 1933 including Rs. 60,058-5-2 brought forward amounts to Rs. 4,55,891-5-1, an *ad-interim* dividend at the rate of 10 per cent. p.a. was paid for the half-year ended 30th June, 1933, which absorbed Rs. 1,50,000. The Directors now recommend:—To pay a final Dividend at the rate of 10 per cent. p.a. for the half-year ended 31st December, 1933, free from Income-tax amounting to Rs. 1,50,000, to transfer to Reserve Fund (raising that Fund to Rs. 21,50,000) Rs. 75,000, to grant a Bonus to the Bank's Staff Rs. 25,000, to carry forward to next account Rs. 55,891-5-1, total Rs. 4,55,891-5-1.

During the year under report the money market remained very easy and consequently it was difficult to find safe and remunerative investments. The Directors, however, trust that the Shareholders will consider the results shown to be satisfactory.

A sum of Rs. 100 was paid by the Directors to the Calcutta Tropical School of Medicine and Rs. 70 to Dhanbad Hospital for upkeep, in anticipation of your sanction.

The Directors have to report with deep regret the death of Mr. Matubhai H. Kantawala who was a Director of the Bank for a number of years. The vacancy thus caused was filled by the appointment of Sheth Todarmal Samal Bechar as a Director.—Sir Lalubhai Samaldas, N. M. Muzumdar, Col. K. Shivraj Singh, Raj Ratna Bhailal Dajibhai Amin, Sheth Pransukhlal Mafatlal, Girdharlal Dosabhai Parikh, Seth Durgaprasad Shambhuprasad Laskari, Toolsidas Kilachand, Sheth Todarmal Chimanlal Samar Bechar, Directors, Bombay.

GANESH FLOUR MILLS CO., LD.

Extracts from Directors' Report:—

Report, The Trading Profits of the Company for the year ended 30th September, 1933, amount to Rs. 3,63,135-5-6. Including the balance brought forward and the adjusting liability on account of Income-tax the amount available for disposal is Rs. 3,77,301-0-4. This year's Profits constitute a new record in the history of the Company, on which please accept my congratulations.

During the year under report conditions in Flour Milling Industry continued to be bad and the efforts in securing concerted action to stop over-production and consequent competition between the Mills did not bear fruit. There was a greater competition in the Vegetable Ghee line, chifly owing to large imports of hardened Whale Oil from Japan and the continent of Europe. The additions to your Vegetable Products Factory have been completed and are, I am glad to say, now working satisfactorily.

Our Flour Mills at Lyallpur has been steadily working for the Government. The last contract expired on 1st December, 1933, and I have great pleasure in intimating that we have secured a renewal for another three years although at reduced rates which will still further reduce the already moderate return on our investment on that Mills. Further extension of wheat storage accommodation to meet the requirement of the Army has been provided, and everything possible is being done to render the Army complete satisfaction in the undertaking.

With a view to strengthen the position of this Company, and to enable further extension of our activities, I propose:—That no dividend be paid in cash, but in lieu thereof, the Capital of the Company be raised by issue of 28,000 Cumulative Preference Shares of Rs. 12-8 each carrying a fixed dividend of 4 per cent. per annum to be allotted fully paid up as Bonus to the Shareholders in proportion to the Shares they hold, raising the issued Capital to Rs. 7,00,000, that a sum of Rs. 2,500 be transferred to Charity Account, that, in order to leave a suitable carry forward to meet Income-tax and Super-tax, etc., a sum of Rs. 1,00,000 be appropriated from the Company's General Reserves.

Before concluding this report, I beg to thank our Directors, specially our Chairman, for the support and help during the anxious times we have passed through. I also desire to thank our Managers for their valuable work, which has contributed in no small degree to the prosperity of the Company. Maha Narain, General Manager and Secretary.

Presiding at the Statutory Meeting, and afterwards at the First General Meeting of Industrial Investment Trust Ltd., held at the registered offices of the Company, 63, Apollo Street, Bombay, yesterday, Sir Kikabhai Premchand Kt., the Chairman of the Company, said:

The Trust was registered on the 10th of August, and commenced business on the 10th November. I should like briefly to explain the objects of the founders in establishing this Company, and the advantages which, in their opinion, it offers to shareholders.

This is, I believe, the first public Investment Trust organised in India. Many of you are familiar with the

growth of the Investment Trust movement in Great Britain and in the United States of America ; in Great Britain many hundreds of millions of pounds sterling are invested in their corporations. The reasons for this remarkable growth are that an Investment Trust offers to the shareholder, and especially to the small shareholder, a greater security combined with a fair return on his capital than any other joint stock company. The monies subscribed are, under skilled direction, invested in a variety of first-class securities, with a wide geographical distribution. In some of the older Trusts, each individual shareholder is a copartner in fourteen hundred carefully selected investments.

An examination of the returns of eighteen representative British Trusts shows that—although many of them are saddled with investments made in the boom period and with frozen credits abroad, they returned to their shareholders in 1933 an average dividend of 7.36 per cent. A Trust investment is consequently the nearest approach to scientific investment obtainable. The Industrial Investment Trust has been established to bring these advantages within reach of the Indian public, and especially of the small investor and the investor in the mofussil.

In the opinion of the Directors, the present is a favourable opportunity for the launching of an Investment Trust in India. The inflated values of the boom period have passed. An Industrial revival has set in. The investments already made show a useful capital appreciation.

I should like to draw attention to three special features in the Company. There is no Managing Agency, so all profits made will go to the benefit of the shareholders. There are no promotion expenses, and the preliminary expenses will not exceed ten thousand rupees. The Trust will be managed in accordance with the best British practice and with strict economy.

The prospectus is now in preparation and will shortly be issued to the public.

Report—For the year ended 31st December, 1933.

The net Revenue after charging Rs. 1,02,587-3-9 to Depreciation is Rs. 2,20,456-5-11 to this should be added the balance on 31st December, 1932, Rs. 34,075-5-0 making a total of Rs. 2,54,531-10-11.

The Directors recommend that this amount of Rs. 2,54,531-10-11 be appropriated as follows.—In payment of a Dividend of 8 per cent. free of Income-tax for 1933 Rs. 1,84,000, in payment of a Bonus Dividend of 1 per cent. free of Income-tax for 1933 Rs. 23,000,total Rs. 2,07,000, to place to General Reserve Rs. 15,000, to carry forward Rs. 32,531-10-11, total Rs. 2,54,531-10-11.

Development.—During the year 281 new Exchange Lines, 74 Extension Lines and 13, Private Lines, were withdrawn.

The improvement anticipated in the Report for 1932, was achieved and during the year under review there was a net gain of 103 Exchange Lines, 23 Extension Lines and a loss of 7 Private Lines. With a better trade outlook, we can expect a continuance of development.—Dewan Bahadur Govindoss Chathoorbhoojadoss, A. S. Todd, G. H. Hodgson, M. A. Muthian Chetty, J. A. Rowland Knox, Directors.

Extracts from Directors' Report :

Report for the year ended 30th September, 1933.

During the year erection of the Factory and other Buildings and the installation of the Machinery and Plant was proceeded with, these being satisfactorily completed by the end of November, 1933. Manufacture of Sugar did not commence until the beginning of December, 1933, and consequently there is no Revenue Account for the year under review.

Charges incurred during construction have been allocated proportionately between the Fixed Assets.

Earthquake.—As was reported in the Circular to Shareholders, issued by the Managing Agents on the 25th of last month, the earthquake of 15th January, 1934, caused severe damage to the Company's property. Fortunately this was largely confined to the buildings, while the plant generally, with some comparatively minor exceptions, has escaped serious harm. The extent of the damage is, however, such that it will unfortunately not be possible to do any further crushing during the remainder of the current season. Important foundations have in some cases been displaced and dismantling to a considerable extent will have to be carried out before the plant can be put into working order again. It will furthermore be necessary to rebuild most of the buildings, including the factory building almost entirely. Before deciding upon a definite programme of reconstruction, a very thorough investigation is being carried out in regard to the effects of the earthquake in various directions, upon the result of which will depend the form which our recommendations to Shareholders as to the best procedure to follow will take.—J. Reid Kay, J. Aitken, Directors. James Finlay & Co., Ld., Managing Agents.

ATTOCK OIL CO., LD.

In a progress report the Directors state that sales of products in 1933 have been on a considerably lower scale than in 1932 in line with the fall in crude production. It is not yet possible to arrive at a close estimate of financial results, but a small loss is expected after meeting boring costs at Khaur and Dhulian, but before providing for major depreciation. Cash resources have been increased since the end of 1932, but to arrive at this position stocks have been reduced.

The report gives details of developments since the position was last reported on at the meeting held on 30th June. On the Khaur field results of drilling to the intermediate sands during most of the period were very disappointing and it has not been possible to maintain crude production at the previous year's level, the total production for the year 1933 being 101,375 barrels, against 145,681 barrels for 1932. Recent results have been more promising and give some hope of increasing production from the intermediate sands, although it is still impossible to forecast accurately in this respect. The new high pressure plant was transferred to the deep test at the end of October, and the pressure has been kept under control up-to-date, which is stated to mark a new and important advance in the technique of drilling on the Khaur field. It is now proposed to cement a string of pipe, and if this can be carried out successfully the well should be in good shape for getting down to considerable depth—with a chance of reaching the limestone which is the objective.

WORLD OF INDIAN FINANCE

Calcutta, March 16.

The current week has been a replica of the earlier week, with continued stringency of money. Rate for inter-bank call money has ranged from 2½ per cent. to 3½ per cent., with lenders scarce and borrowers plentiful. Minor fluctuations were noticeable but the general undertone was firm. Credits were in good demand till the mid-week. On Thursday, great pressure was experienced, especially in the Western Capital. Towards the close, however, there was some easing in the situation. The squeeze on Thursday may be attributed to the payment of the Treasury Bills allotment. The Treasury Bills operations during the week resulted in a withdrawal of funds though, perhaps, only to a trifling extent. The prognostications made in these columns last Friday were fulfilled—better response to Treasury Bills intermediates and larger applications at the weekly auction. Against Rs. 1.9 crores last Tuesday, applications in the current week came to Rs. 2.30 crores. Reference was also made, in the last week's issue, to a likely shrinkage in the cash balance of the Imperial Bank. From Rs. 10.96 crores on March 2, the cash balance of the Bank has dropped to Rs. 8.77 crores on March 9. As regards this week and the ensuing weeks, it may be said that, with revenue coming in and large interest payments received by the Bank on account of its investments, the cash balance of the Imperial Bank should begin to swell up. There is as yet no trade demand and interest in government securities has not been as keen as in the last week. The money position should, therefore, ease up till March 23. There are no large Treasury Bills Maturities during the last week; and though a number of holidays supervene it is likely that there will be a temporary tightness in the money market, unles the Government happen to expand currency against sterling assets with a view to pay off their outstandings of ways and means advances from the Imperial Bank. So far as the exchange banks are concerned, they have, of course, the ready expedient of selling sterling to the Government to increase their rupee balances in India.

What are the prospects of the Government being able to repay their ways and means advances? Last week's statement of the Bank shows ways and means advances at Rs. 8½ crores. The Treasury Bills Maturities in the current week may be taken roughly as Rs. 3 crores, of which Rs. 1½ crores was obtained by the weekly auction. Seeing that the response last week was satisfactory, we may assume that the Government will get about the same amount of intermediates in the current week. On this account, therefore, there should be neither improvement nor deterioration in the Treasury position. Sterling purchases will account for £1 million or Rs. 1.33 crores. Then, on March 15, the interest on 4½ per cent. 1934 bonds, 5 per cent. 1935 bonds, 6½ per cent. 1935 Treasury bonds, 4½ per cent. 1955-60 loan and 4 per cent. 1960-70 loan fell due. It may, however, be added that all the interest due on these loans will not be drawn on the same day. Thus, for instance, the bulk of the 6½ per cent. Treasury bonds is held by middle class investors in their Post Office Saving Bank account. 4 per cent. 1960-70 loan is scattered all over the country. Even allowing for dilatory applications for interest for these reasons, the payment should exceed a crore and a half. The excess of revenue over these payments could not, therefore, be large enough to pay off any appreciable portion of the ways and means advances. At the outside, a reduction of Rs. 1 crore may be granted in the current week.

Next week, a substantial reduction in the amount may be expected.

The last week of the month and of the financial year is cut into by so many holidays that the normal course of revenue collection will be interrupted. With a weekly outgo of nearly Rs. 2 crores on account of sterling purchases—even the last return shows a purchase of £1.6 million—the prospects of wiping out all the ways and means advances seem remote.

In this context, we may well pose the question whether it is proper or right to keep ways and means advances outstanding at the end of the financial year. It is possible to argue that there is nothing wrong in this, as it represents borrowing from the Bank which is not very different from borrowing from the market. But this does not seem to us to be sound reasoning. For one thing, it is quite possible that the borrowings on ways and means account are costlier to the Government than borrowing from the public by means of Treasury Bills. For another thing, why should the Government persist in this policy of accumulating unduly high sterling balances and *pay* for their requirements in India when they can utilise such surplus balances for currency expansion? Why should the market experience tightness of money when there is really no case for credit control? These ways and means advances have to be repaid sooner or later; and if the Government cannot do so in the peak of the revenue season, how will they do it in the slack season except by borrowing from the market? There has been no trade demand so far; and if a belated spurt sets in, even though it may be temporary, money conditions should be more stringent and the Government will have, as a consequence, to pay heavier prices on such borrowings. The old theories of Denningian days, when expansion was tabboo and contraction the only remedy for all earthly ills, should be coffined and buried and a straightforward expansion made against sterling, if only to show that the Government have enough confidence in the stability of the rupee-rate without requiring the artificial prop of monetary stringency.

The securities market is roundabout last Friday's levels. Though there was steady buying from Bombay the prices did not respond. London has lost five shillings in comparison with last Friday's quotation for 3½ per cent. Paper. The general quietness must be attributed to profit-taking and a feeling that the rise has been high enough. The announcement of the British budget, if favourable from the point of view of income-tax, may start a fresh movement. Though the general undertone is steady and healthy, the market is not yet ready for any further spurt. Rumours of a New Loan have died for the nonce; and bears are watching the bulls to see if the latter are tired or getting nervous about any international developments.

Exchange has been a firm market all week. There have been very few export bills but demand for remittance has been entirely absent. Such demand as there has been has been supplied amongst banks themselves. Forward rates have been somewhat steadier while the nearer rates have been a shade easier. On the sterling day, applications for £59 million were received and allotment was on the basis of 1 2/3 per cent. The Remittance *Communique* for the week ended March 10, 1934, shows that sterling purchased at the tap-rate amounts to £1.8 million.

The closing rates are: 1s. 6 1/16d., March-April T.T. with 1s. 6 5/64d., available for March T.T.; 1s. 6 1/32d., May-June T.T.; 1s. 6d., July-December T.T.

Bills may be quoted: 1s. 6 3/16d., for a couple of mails; 1s. 6 3/16d., and 1s. 6 5/32d., combined for three mails; 1s. 6 5/32d., April; 1s. 6 1/8d., from May 10 onwards, with possibly small buyers a shade under the rates in the latter period of the year.

Money has been in good demand with rates ranging between 2½ per cent. and 3½ per cent. Inter-bank call money may be quoted 3¼ per cent. Firms' money for call, three days' notice and seven days' notice was quoted ¾ per cent. One and two month deposits were quoted 1½ per cent. and three month deposits 1½ per cent.

BANKS:

It is a mistake to think of a Bank as an institution which exists merely for the purpose of taking care of depositors' money and paying it out on their instructions. Whilst it is true that this is the primary business of a Bank, it forms only a part of the duties which Lloyds Bank is prepared to perform for its customers. It is not possible in a short space to enumerate the many facilities the Bank offers, but its Branch Managers are prepared to consider, or, if they are not themselves in a position to advise, to obtain expert opinion upon any question affecting their customers' finances, investments, income tax, Trusteeships, Executorships, etc.

Beneath the outward calm of international finance and international exchanges the deeper undercurrents are still flowing strong. So far as the fate of the currencies of gold standard countries is concerned, the balancing of the French Budget has materially altered the outlook. But it could hardly be said that the difficulties of the gold standard countries have vanished.. For one thing, it is incorrect to suggest that the French Budget has been balanced, in the sense that all the necessary increase in taxation and decrease in expenditure have been effected. All that the French Government have done is to procure the assent of the Chamber of Deputies to the necessary measures being effected by executive decree instead of the usual procedure of a detailed Finance Bill and the like. As our Overseas columns this week show, M. Germain Martin has bound himself to effect the necessary retrenchment by decree. There is no reason to suspect that the Finance Minister will not exert himself to the utmost to implement his promise. But it is just possible that new factors, which he cannot altogether foresee or appraise now, might rise to foil him. It is apprehended that, owing to the growing tension of international relations, France might feel impelled to increase the size of her armaments ; and already proposals have been adopted for extending the term of training for the forces. Other measures, doubtless, are also in progress and the cumulative effect of all this might well be to retard the progress towards the balanced budget. If and when the Government is faced with the need for more resources, it is more than doubtful if the Government would resist the temptation of the extremely handy course of inflating currency, especially as its value stands higher than that of others.

Perhaps the best index of the weakness of the gold standard currencies is afforded by the recent trials of the lira. It will be remembered that the lira sagged nearly three per cent. below its gold export point. Various forces were at work to produce this result. Among them might be mentioned the cessation of large-scale remittances from the Italian residents in America to their homes, partly in lieu of their savings and in far greater part in fear of the devaluation of the dollar. As a result of the disappearance of the fears regarding devaluation, a counter movement has been afoot, with the result that the lira has not only been deprived of one of its principle supports, but has also been considerably weakened. Another factor which helped the lira to sag in such a marked manner was the sales of Italian loans by foreign holders. Consequent on the large-scale conversions effected by the Italian Government, to which reference was made in these columns sometime ago, foreign holders of bonds have naturally been keen to dispose of their holdings when the yield derivable thereon has been so seriously cut into by the operations of the Government. In such a position, the authorities were well advised not to attempt to bolster up the external value of the lira ; for any such attempt was bound to encourage bears ; and it might well be that the attempt would ultimately prove futile and end in a depletion of the Government's resources.

The weakness in the lira has proved to be short-lived and a timely statement by Signor Jung, the Minister of Finance, disavowing all intention on the part of Italy to abandon the gold standard has had its natural effect. In the case of other countries, probably, the authorities would not have been so readily taken at their word. For it has been part of the austerity of Fascist administration to maintain the integrity of the currency against odds. Signor Mussolini has never countenanced the suggestion that Italy might follow the rest of the world and have a bite at the fruit of devaluation. And in as much as the Fascist Government have maintained a secure hold on the activity of exchange banks, it is more easy for them to protect the lira than it has been for other governments to protect their currencies.

Of the gold group, Belgium too, has of late, felt the privations of the gold standard. But this country has, at the moment, no intention of abandoning it in a hurry. At the annual general meeting of the National Bank of Belgium M. Louis Frank, the Governor, stated that Belgium had "by dint of drastic deflationary effort adjusted prices and costs to the new international monetary situation and that by reason of this and of the strong reserve position, no danger can be said to threaten the stability of the Belgian currency."

One of the principal developments in international finance during the week is China's ratification of the silver agreement arrived at at the World Economic Conference. One would think that this should be regarded as a matter of course and as a foregone conclusion. But it is significant that, as against the general notion that the silver agreement benefits China and India more than any other country in the world, China has been almost the last to come forward with formal and legal ratification. It is significant also that, while setting the seal of its approval to the London Silver Agreement, the Yuan has also insisted on retaining its freedom to take any action it deems necessary, "if gold and silver commodity prices rise to the extent of being harmful to the national economy." It may also be pointed out that a fortnight ago when the Finance Minister announced the decision to ratify the agreement, he also stated that "a big increase in the price of silver would be a mixed blessing for China."

In the light of all this, it is necessary to examine the value of the present attempts at rehabilitation of silver prices to a country in the position of China. So far as India is concerned, the rise in the price of silver affects her not through an enhancement of the value of her currency—for the rupee is only a token of silver coin, the value of which is linked to sterling —but the increase in the value of India's hoards of the white metal. How exactly this increased value will come into play in international trade, nobody has troubled to examine. But it may be taken that if there were some tendency on the part of the masses to dispose of their silver ornaments, they would realise in return for them more in rupee or in international currency than sometime ago.

But the position of China is distinctly different. In China silver is not a hoard having but a loose connection with the currency of the country, but the currency of the country itself. Any increase in the gold value of silver would mean that the Chinese currency gets to be over-valued in the international exchanges. Now there is no reason why this overvaluation of currency, which the majority of the nations of the world shun like a serpent, should be a source of profit to China. It might be that Chinese currency might have a larger purchasing power in terms of the currencies which are linked to gold either on a stable or an unstable basis. But unless one believes in the archaic theory that increase in imports must before long be reflected in an increase in exports, one should fight shy of steps that are calculated to put up the exchange value of the national currency. It would appear that the Chinese Government are not free from such apprehensions.

NATIONAL INSURANCE CO., LD.

Head Office : **National Insurance Building,**

25 YEARS TEST

REVEALS THE BEST

Service: For over 25 years "The Indian Mercantile" has served the Indian Public with complete satisfaction.

"Dependable" is no exaggerated description of this indigenous concern which has at the time Assets exceeding three times its paid-up capital and has paid, with rare exceptions, handsome Dividends since its inception.

Life policies issued by this Company are scientific, up-to-date and designed to meet individual requirements at competitive rates of premium.

Agency Terms are unique and treatment sympathetic.

THE INDIAN MERCANTILE INSURANCE CO., LTD.,

11, Bank Street, Fort, Bombay.

MARKET REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March, 15.

There was no particular development in the Stock Exchange during the period under review. Government Securities were easier in sympathy with quieter tone in India Government's Sterling Securities in London. Jute Mills shares were also easier in sympathy with quieter Hessian Market. Cottons were dull while only a limited business was put through in Coals. Apart from the continued activity in the Engineering Group, Miscellaneous Industrials were practically unchanged. The little more activity which was in evidence in Tea shares during the last week has been maintained.

Government Securities: Following the quieter tone in India Government's Serling Securities in London an easier feeling has obtained in the Government Securities.

3½ per cent. Government Paper ruled quiet and fluctuated within narrow limits—opening at Rs. 87/5 on Monday 3½ per cent. Government Paper was quoted at Rs. 87/1 at the time of writing. 4 per cent. Loan (1960/70) kept fairly steady round Rs. 102/10 and 3½ per cent. (1947/50) at Rs. 97/2. 5 per cent. Loan (1945/55) was quoted at Rs. 115/-.

The Bank rate remained unchanged at 3½ per cent.

Fixed Interest bearing Securities: The demand for Jute Mills' Preference shares continued, as usual, but business was somewhat restricted. Among other Preference shares B. I. Corporation Preferences were marked up further to Rs. 133/-, Burn & Co. (7 per cent. Pref.) changed hands at Rs. 118/- Kumardhubi Engineering Preference at Rs. 52/- and Bengal Paper ("A" Pref.) at Rs. 125/-.

Rather limited business was put through in Debentures. 5 per cent. (1958/88) Calcutta Port Trust changed hands at Rs. 107/12, 7 per cent. (1928/48) Ryam Sugar at Rs. 112/-, 5 per cent. (1920/45) Sejua-Jherriah Power at Rs. 96/8 and 7 per cent. (1919/35) Gohper Tea at Rs. 90/-.

Other Investment Stocks: Less business was reported in Banks' shares. A small lot of Imperial Bank's fully Paid-up shares changed hands at Rs. 1,265/- and Contributories at Rs. 312/-, Central Bank's shares were quoted at Rs. 25/8 cum dividend.

There was not much doing in Light Railway Shares—Hardwar-Dehra changed hands at Rs 110/- and Hoshiarpur-Doab at Rs. 81/8.

Cottons: Dull conditions prevailed in Cotton shares and only a minimum of transactions resulted. Benares Cotton and Silk, however, kept steady at Rs. 1/12.

Coals: Apart from the sustained demand for Amalgamated round Rs. 15/12 there has been nothing of any interest reported in this section. Bengal, Burrakur (ordy.) and New Beerbhum (ordy.) were rather easier. Equitable (ordy.) and Sendra kept fairly steady at last levels. Pench Valley advanced to Rs. 35/8. Among others, Bhulanbararee, South Karanpura and Talcher were marked down to some extent. The report and accounts of Bird-Heilgers Group of collieries for the half-year ended December 31, 1933, have been published and they are given elsewhere in this issue.

Jutes: Quieter conditions prevailed in this section during the early part of the period under review in sympathy with weaker commodity markets and a subdued feeling was apparent. Howrahs opened at Rs. 55/8 on Monday and receded to Rs. 54/13 on Wednesday, while Kamarhatty fluctuated between Rs. 552/- and Rs. 547/-.

Towards the close the market recovered owing to the news that stocks in U.S.A. have been reduced considerably and there will be more demand of Hessians than it was anticipated. It is expected that the shipment will be better during this month. Prices of Hessians improved, but the sagging tendency in the raw jute continued. Howrahs, at the time of writing, advanced to Rs. 55/12 and there has been a revival of interest in other shares also. Among low-priced stocks, Clives, Hukumchands and Nationals were enquired for and changed hands at better rates.

Among higher-priced denominations, Ballys were in better demand while Barnagore, Gourepore and Kanknarrah were also enquired for.

Although there is still scope for improvement in the prices of Jute Mills shares as the mills are making a fair manufacturing profit, but in view of the high level of rates prevailing, investors should proceed with caution.

Electricals: Only a limited business was put through in Electrical shares. Bengal Telephone (ordy.) changed hands at Rs. 15/- while Upper Ganges and Upper Jumna Valley Electrics were quoted at last levels.

Engineering: The usual enquiry for Engineering Concerns's continued unabated and the feature of the week has been the improved demand for Indian Iron and Steel, which from a quotation of Rs. 5/6 during the week-end, advanced sharply to Rs. 6/2 at the time of writing. Bengal Iron also kept very steady at Rs. 4/10. Arthur Butler remained unchanged at Rs. 7/2, Burn & Co. (ordy.) at Rs. 215/- and Kumardhubi Engineering (ordy.) at Rs. 2/8. Indian Galvanizing was quoted at Rs. 10/-, while Indian Standard Wagon (ordy.) receded slightly to Rs. 49/-.

Sugar: Sugar shares kept steady, on the whole, as it would appear, that the first shock of the excise duty is over in view of the fact that the margin of profit may remain unaffecetd. Cawnpore (ordy.) kept steady at Rs. 30/6, Champaran at Rs. 20/4, New Savan at Rs. 13/4, Ryam at Rs. 30/- and Samastipore at Rs. 10/-.

Miscellaneous: In this group B. I. Corporation (ordy.) improved to Rs. 1/4 and a fairly large turnover resulted. Burma Corporation was also better at Rs. 10/- on London advices, Calcutta Tramways (ordy.) kept steady at Rs. 17/4, Indian Cables at Rs. 3/4 and Ivan Jones at Rs. 2/8, British Ceylon Corporation recorded a deal at Rs. 6/12, while Indian Wood Products were easier at Rs. 27/12, Calcutta Ice, on the other hand, improved to Rs. 8/-, Midnapore Zemindary remained steady at Rs. 62/- and Murree Brewery improved to Rs. 173/-.

Teas: The better feeling which was evidenced in this section during the last week, has been maintained although results of sales were not satisfactory. Tezpore were in active demand and advanced to Rs. 10/- with buyers over, while Bishunath were marked down to Rs. 27/12, Naga Hills kept steady at Rs. 17/14.

MADRAS STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Madras, March 15.

The securities market ruled steady with a large business passing in 4 per cent 1960-70 and 3½ per cent 1947-50 loans. Amongst other securities, 5 per cent 1940-43 Bonds were the most steady feature. Mysore Loans were dull, excepting 4 per cent 1953-63 which rose to Rs. 102. 5 per cent Cochin State Loan met with business at Rs. 105.

There was good enquiry for Madras Corporation Debentures with none offering.

Amongst joint stock company debentures, Rajahmundry Electrics, Singareni Coals and Vellore Electrics were enquired for without attracting sellers. United Nilgiri 1936 and 1943 debentures changed hands at Rs. 101 and par respectively. The preference share market was active with Deccan Sugars absorbed at Rs. 116, Premier Hosiery Works at 4 annas premium and Tata Iron and Steel Second Preferences at Rs. 121.

Bank shares were firm. Imperial Bank Fully Paids were taken up at Rs. 1,267½ and the Contributories at Rs. 315. Indian Banks were popular at Rs. 95.

Amongst Public Utilities, Madras Telephones were asked for at Rs. 16-12 cum-dividend ; Rangoon Telephones at Rs. 12 and Vellore Electrics at Rs. 11-12 whilst sellers predominated for Trichi Srirangams at Rs. 151-8.

Mills were firm. Bangalore Ordinary shares were taken up at Rs. 90 and Buckinghams Ordinary at Rs. 178 ex-dividend. Vasanta Mill Preferences were an active market at Rs. 105. Kaleeswarars were lower at Rs. 250 cum-dividend.

PURE IRISH LINEN

Having just arrived we are offering these goods at the following low prices :

Coat ... ,, 12/8

Tussore, Poplin, and Palm Beach Suiting and light Mohair Dinner Jacket for the Hot Season. Fit, Style and workmanship with prompt service always assured.

A Trial Order solicited

WILLIAM HEATH
5, Park Street, Calcutta.

Cements were active and closed easier. Considerable profit-taking deals put through included Indian cements between Rs. 345 and Rs. 350, Katnis at Rs. 300, United Cements at Rs. 77 and Shahabads at Rs. 315.

Sugars were dull.

No business passed in plantation section. Both rubber and tea were active. Cochin Malabars gained further and were done at Rs. 2-2, whilst Cochin Rubbers were done at Rs. 16-8. A line of Periakaramalais changed hands at Rs. 43 whilst Highland Produce shares were a feature rising to Rs. 19 cum-dividend with no sellers below Rs. 20 at the close.

Of the smaller priced shares a very large parcel of Nilgiri Neergundis changed hands at Re. 1.

The Miscellaneous market was dull except for transactions in United Brewery ordinary shares at Rs. 97 and some speculative interest in Tata Iron and Steel ordinary shares around Rs. 58.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Bombay, March 15.

Securities:

Giltedged securities ruled fairly steady during the period. The rate for 3½ per cent. Government Loan moved both ways, alternate firm and weak advices from London helping such fluctuations. However, neither bears nor bulls dominated the market for long, and the range of price movement was confined to only eight annas. From its last close at Rs. 87-6 the rate touched highest at Rs. 87-9-6 and lowest at Rs. 87-1-6, being finally quoted to-day at Rs. 87-5-6.

Shares:

The outstanding feature in the share bazar was that textile concerns came into limelight, their turn being overdue. Cement group was a bit easier, though the rumour of a higher interim dividend for Shahabads stiffened their rates. Heavy purchases by prominent bull carried up rates of Tata Steels, though later some profit-taking took place. Big power shares frequently showed tendency to ease off but bull support again firmed up. Belapur Sugars. Indian Radio ordinaries and New India Assurance improved during the period. Otherwise, industrials were rather dull. Price movements of important scrips are tabulated below:

	Close on 8-3-34			Highest			Lowest			Close on 15.3-34

JUTE AND JUTE GOODS

JUTE

Calcutta, March 15.

Further weakness developed in the Raw Jute market during the current week. Price of May Futures fell down to Rs. 29-10. The highest and lowest price during the week were Rs. 31 and Rs. 29-6 respectively.

The opening of the market on Friday was steady at about Rs. 31 but as the week progressed, market began to display weakness under pressure to sell by long bulls and weak holders. The goods market is ruling rather easy and is likely to decline further. The liquidation is very much over and the technical position of the market is lighter and responsive to bull sentiment. The difference between Ready Firsts and Ready May Futures has narrowed down to Rs. 2 instead of Rs. 3 a week ago. This has led several hedge accounts to buy back Futures and is a healthy sign of the market. But the heavy stock position together with the apathy of the Indian mills to withdraw at a rise, do not show any signs of a rise in the Jute price.

Business in Ready Firsts was done at Rs. 28 with buyers at this price for March towards the close. Mills have also bought District LR and XLR at Rs. 4-8 and Rs. 4 with sellers at this price. Tossa was done at Rs. 25 with buyers asking annas four more per bale at the close.

Statistical Position.

The arrivals of Jute during 8 months ending Feb. 28, 1934, are 70 lakhs of bales as against 62½ lakhs of bales during the same period in 1933. The purchases by mills have been 35 lakhs bales or almost the same as last year. Exports have, however, shown an increase to 30 lakhs bales against 24 lakhs bales in 1933. Consumption in India during the 8 months is estimated at 32 lakhs bales as against 31 lakhs bales last year, while consumption abroad is estimated at 26 lakhs bales against 24 lakhs last year.

Stocks on March 1, are estimated as below:—

	Lakhs of Bales	
	1934	1933
Mills in India	49.5	46.5
Outside India	19	15
Bazaar and Press House ...	13	7

London, March 15.

There has been a good business round about £16-5, during the week. The buyers at the moment seem to be satisfied. The undertone of the market is steady, and sellers are less willing to discount prices. The supply being plentiful buyers are not following the advance. Spinners are awaiting the developments of new crop sowings.

JUTE MANUFACTURES.

Calcutta March 15.

Easy and weak, can be termed the condition in the jute goods market this week. The sales reported last week by a long bull account did go a long way to depress the market. The recovery which took place towards the close of last week could not be maintained and under pressure to sell by weak holders and second-hands, nine porter hessians has declined from Rs. 10 to Rs. 9-9. As anticipated the decline has been gradual and may go further, because the pressure to sell is not still eliminated.

The top-heavy position of the market has remained more or less unchanged. The demand from the consuming centres during the current week has been poor, exports during the current month have also been less encouraging, and the consumption in U.S.A. during February were expected to show falling off as compared with the previous month. The technical position of the market is still heavy and it would not be surprising if further weakness be noticeable in the course of the following week.

To the greatest surprise of the market the stocks of hessians in U.S.A. at the end of February has shown a falling off by about 20 million yards as compared to the previous month, while the consumption during February is estimated to be a million yards more than that of January. Consequently the price of hessians has gone up from Rs. 9-9 to Rs. 9-12 and the undertone of the market is more healthy.

Heavy goods market has also ruled easy in sympathy with hessians market. The decline, however, has not been very large. B. Twills were done at Rs. 24-8 and Heavy Cees are quoted at almost the same price for near and forward position. The volume of business in this section has been very poor.

New York, March 15.

The market has been ruling steady but quiet with a fair amount of business passing at the decline. Pending the passage of the Bankhead Bill, the market is waiting for further developments. Consumption during February has been better than January. The undertone of the market is steady.

COTTON AND COTTON GOODS

COTTON

(By Wire)

(From Our Correspondent)

Bombay, March 15, 1934.

American markets have been quite uninteresting during the period. Operators continued to remain inactive, though the Bankhead Bill is expected to be passed without amendments limiting ginnings to 10 million bales. New York May rate, after moving beween 12.37 and 12.15, almost reverted to its previous close. Liverpool May moved from 6.33 to 6.23, being quoted to-day at 6.27 in the opening. Locally the market would have perhaps, succumbed to bearish proclivities of operators but for news about reduction of railways freights, town duty and port Trust charges.

Calcutta, March 15.

During the week the market has ruled dull and lifeless with very small fluctuations. The highest and lowest price for April-May Broach were Rs. 203 and Rs. 199 respectively.

Pending the passage of Bank-head Bill the New York market has ruled easy. Likewise the Indian Market has also remained featureless Liquidation is almost over, and the technical position of the market is healthy. But the heavy stock position in Bombay, together with the pressure of the new crop movement, and a poor export demand, have been telling upon the market and under sheer pressure to sell values do not show advance. Indian cotton is cheap in parity. World consumption is encouraging. Taken all the factors into consideration it appears as if the market will remain narrow. Opinions are divided about the real effect on prices following the passage of the Bank-head Bill, and the events in due course will show what the future trend of the markets would be.

World Consumption: The consumption of cotton in the world during the six months ending January 1934 is estimated at 12.51 million bales as against 11.88 million bales during the same period last year. The increase in different cottons has been as below:—

(In million bales)
Six months ending January 1931.

			1934	1933
American	...	...	7.01	6.84
Indian ...	...	...	2.35	2.06

Mill Stocks: In spite of the increased consumption during the said half year the estimated Mill Stocks are 5.21 million bales on February 1, 1934, as against 4.56 million bales on February 1, 1933. The increase in stocks of different cotton is as below:—

	Million Bales February 1, 1934	Million Bales February 1, 1933
American	2.83	2.70
Indian	1.20	.83
Egyptian	.24	.20
Sundries	.93	81
Total	5.21	4.56

World Stocks: The increase in stocks is not visible in case of Mills alone, but is also noticeable in Liverpool and Bombay. The visible supply in U. S. A. markets is no doubt lower than last year but the invisible supply is quite enough to feed the world consumption for next two years, if, the next American crop, according to Bank-Head Bill be limited to 10 million bales .

The following figures will clearly explain the situation:

	(Million Bales) February 23 1934	(Million Bales) February 23 1933

GOLD

(*By Wire*)

(From Our Correspondent)

Bombay, March 15, 1934.

Gold rates fluctuated within a very small range as sterling-dollar and sterling franc rates remained quiescent. The franc rate improved from 77.15 to 77.53 last night. Sterling-dollar rate moved between 5.07½ to 5.10¾, being quoted to-day at 5.09 7/8. London ready gold, from its previous close of £6-16-8 improved to £6-16-10½, and then gave way to £6-16-2. Local spot quotation moved between about 3 annas from Rs. 33-15 to Rs. 33-12, being quoted to-day at Rs. 33-12-6.

Calcutta, March 15.

Steadier conditions have prevailed in the Gold market during the current week. The arrivals of gold from up-country centres has been fair-sized and have been well absorbed at advancing rates to meet the export commitments already made. Quotations at one time were ruling over export parity in view of the heavy bear covering and touched Rs. 34. Stocks on hand in Bombay are estimated at three lakhs tolas and daily offtake is no better than 3,000 tolas. Shipment per S. S. Maloja has amounted to Rs. 90 lakhs. Sovereigns are quoted at Rs. 21-6 for Ready and Rs. 21-7 for Forward positions. There has been practically no change in London-New York and London-Paris Cross rates.

LONDON AIR MAIL WEEK

The Bank of England gold reserve against notes amounted to £190,979,339 on the 21st instant as compared with £190,903,256 on the previous Wednesday.

In the open market the amounts of gold on offer were on rather a smaller scale, although £3,900,000 was disposed of during the week. Supplies were taken for the United States of America, but movements of the exchanges have tended to lessen the margin, the prices quoted yesterday and to-day being practically on parity.

The following were the United Kingdom imports and exports of gold registered from midday on the 19th instant to midday on the 26th instant:—

Imports

				£
Germany	...	...	...	1,578,758

SILVER

(By Wire)

(From our Correspondent).

Bombay, March 15, 1934.

The House Coinage Committee of United States of America approved of two bills, one authorising the Secretary of the Treasury to pay 25 per cent. above market prices for payment in silver against agricultural exports and the other to buy further 1,500 unit ounces of which 150 unit during the next four months and additional 250 unit ounces within a year. Purchases are to be discontinued in case commodity prices advance to 1926 level. Though intimation of this news failed to produce any spectacular rise in foreign markets, it convulsed local bazar with tempestuous fluctuations on Sunday and Monday. Absence of any further news about the two enactments have latterly quietened bullish enthusiasm, and much liquidation has transpired. London silver ready rate from its last close of 20 7/16d. touched highest and lowest at 20¾d. and 20¼d., being finally quoted Yesterday at 20 5/8d. New York Ready silver came up from 46⅛ to 46¾ cents. Locally spot rate advanced from Rs. 55-10-6 to Rs. 56-13 and is quoted to-day at Rs. 56-8, while April rate came up from Rs. 61-8 to Rs. 63-3, and stands to-day at Rs. 62-5.

Calcutta, March 15.

Very steady conditions have prevailed in the silver market during the current week. Opening at about Rs. 61-4 the market suddenly rose to Rs. 62-8 on Monday, on news being received from New York that the Coinage Committee of the House of Representatives have approved of the Bill, authorising the Treasury to pay 25 per cent. above the market for silver shipped to the United States of America in payment of exported agricultural commodities. The Bill further provided for the purchase of 150 million ounces of silver, at market price, during the first four months after the passage of the Bill and 250 million ounces within a year. The purchase of silver to cease if commodity prices reach the 1926 average. This news had a very bullish effect on the local markets and led to good buying activity. London price also rose to 20¾d. latterly declining to 20⅝d.

New York price has, however, showed no such change and has been ruling about 46½ cents. There has been considerable doubt regarding the passage of the bill, but the opinion has been gaining ground that some compromised form may take place and that ultimately the price of silver will be raised higher. Indians have been buying in local as well as London Market, China has operated both ways in the latter.

Further strength was lent to the market on Tuesday when news was received about the introduction of Compromise Bill by Senator Wheeler, authorising the Government to purchase 50 million ounces of silver monthly, until 16 to 1 ratio with gold was reached. Prices immediately rose to Rs. 63-2 to fall back to Rs. 62-6 on profit-taking.

The effect has been discounted by the market at the moment and unless the Bill is passed and actual buying takes place, the market is likely to show some easiness on profit taking.

Due to settlement week the daily offtake was somewhat better, averaging about 50 bars in Bombay and 10 in Calcutta. The stocks in Bombay are, however, unchanged at 10 thousand bars and 1,500 in Calcutta.

London Air Mail Week:

On continued demand from the Indian Bazaars and speculators prices showed a further advance, and 20⅝d. for cash and 20 11/16d. for two months' delivery, were reached on the 23rd instant. Up to this point sellers had been very hesitant but subsequently China offered more freely and, as a result, prices reacted rather sharply, declining to 20 3/16d. and 20¼d. for the respective deliveries by yesterday. New York has operated both ways during the week but Continental operations have been less in evidence.

In the course of his budget speech yesterday at Delhi, the Indian Finance Minister announced that it was proposed to reduce the duty on silver imported into India from 7½ annas to 5 annas per ounce; another matter of interest to the market is the news that both China and Canada have decided to ratify the Silver Agreement reached in London last July.

Following this, the market hardened, general buying and reluctance on the part of sellers resulting to-day in a sharp rise of ½d. prices being fixed at 20 11/16d. for cash and 20¾d. for two months' delivery; these prices are the highest since 8th December, 1931.

TEA

Sale No. 37 was held on 13th March when 8,700 chests were offered for sale. Due to the fag end of the season only few hundered cases were available with export rights which were easily disposed off at previous week's rates.

5,300 Cases of tea leaf and 2,600 packages of dust were offered for internal consumption. The demand was fairly good. Pekoe grades and Fannings were sold at last week's rates, while plain Broken Pekoes and Suchong grades were easier by about 3 pies per lb. Dusts were well-supported and were 3 to 6 pies dearer over the previous week's sales.

Ceylon Tea—

At the London auctions on March 13, 21,100 packages of Ceylon tea were submitted for sale.

There was a quieter market with irregular and easier prices for common and medium qualities.

The following were the lowest prices fetched during the day's auction :—

	Last auction lb.	To-day's auction lb.
Common Pekoe	13½d.	13d.
Common Broken Pekoe	13½d.	13¼d.
Common Orange Pekoe	13¾d.	13½d.
Common B. O. Pekoe	13¾d.	13½d.
The following are the value prices :—		
Clean Common Pekoe	13⅝d.	13¼d.
Clean Common Broken Pekoe ...	13⅝d.	13⅜d.
Clean Common Orange Pekoe ...	14d.	13¾d.
Clean C. B. O. Pekoe	14½d.	13¾d.

Indian Tea exports :

Exports from Northern India from 1st April, 1933 to 13th March, 1934, are as follows :—

	Season 1933-34	Season 1932-33	Season 1931-32
Total U. K. ...	234,481,259	279,277,888	250,373,505
Total Outmarkets ...	33,905,161	43,842,339	46,149,014
Total Indian Ports ...	23,617 912	24,729,184	20,494,357
Grand Total ...	292,004,332	347,849,411	317,016,876

SUGAR

Calcutta, March 15.

The Sugar market during the current week has been easy and there is not much business to report. Price for Java Ready is Rs. 10-1 and 9-4 for Cawnpore. According to the reports received it is understood that a fairly good business for sugar from Afghanistan has gone to Russia which, in the ordinary course, would have gone to Java. This has further embarrassed "Niwas" which is holding very large quantity to dispose of.

ETHICS AND ECONOMICS OF EXPANSION

Of the ethics of expansion we need say no more than this: a Government, which, at the slightest provocation, was prepared to have recourse to frequent, recurring and large-scale contractions of currency, cannot hope to have its *bona fides* accepted at face value unless, when contrary forces are at work, it shows equal readiness to expand currency to the fullest extent necessary. It has ever been our complaint that in single-minded devotion to exchange, the invariable tendency of the Indian financial authorities has been towards deflation. This complaint receives added force from the experience of the last two months. Makeshifts of various kinds are being tried to tide over the ways and means difficulties occasioned by actual remittances far exceeding the original or revised programme. But the Government fight shy of the simple and straight-forward course of utilising surplus sterling resources for expansion of currency. It cannot be that mere exchange considerations stand in the way of expansionist policy. The exchange market has been, and continues to be, in a healthy condition, with the ruling rate well above 1s. 6d. and with the undertone persistently firm. A few crores added to the currency notes in circulation by transfer of excess sterling assets to the reserve would in no way affect exchange adversely. We can, therefore, only conclude that the relentless pursuit of deflation over a long period has made deflation a habit with our authorities. This is not fair to the several interests comprised in the national economy. Exchange is not the only, or even a very important, factor of national economy. Rise in prices is a far more important factor, whose effect is more widespread and of more vital significance. In the interests of a higher price level, the Government should have, without hesitation or delay, created more currency according as more remittances have been effected than were necessary. We cannot but think that this preoccupation with exchange betokens a tenderness to the small body of men engaged in the foreign trade and this indifference to prices betrays a callousness to the interests of the masses.

* * *

Nor is it necessary to dilate at length on the economics of expansion. If the Government need a certain amount of sterling every year, they are welcome to buy it from the open market, from time to time, at such varying rates as are necessary in the changing conditions of the market. Once the authorities have secured their maximum needs of sterling, they should not, ordinarily speaking, continue to purchase sterling in a way that arrests the rise of exchange to the upper point and that prevents automatic adjustments that will take place in a properly functioning Exchange Standard. In other words, the Government, in a strict interpretation of their responsibilities, can buy sterling at a lower rate than the upper point only so long as their remittance programme remains unfulfilled; once this programme is fulfilled, they are at liberty to buy sterling only when, with the exchange at the upper point, the banks offer sterling to them at the statutory buying rate. If developments had been allowed to proceed on these lines, sterling would have been tendered to the currency reserve, resulting in an automatic creation of currency thereagainst. We admit that a sterling exchange standard is a *managed* currency standard. But the Government of India have been making it a *manipulated* currency standard.

* * *

We are asked by the Finance Member to go into ecstasies over the considerable strengthening of our external reserves. It is also implied, at the same time, that this strengthening of the reserves is due to the shrewd way in which sterling purchases are made and are being made. It is nothing of the sort. If Government had stood aside on the completion of their remittance programme and if they had allowed exchange to rise to the upper point, the amount of sterling that would have found its way to the currency reserve would not have been less than is now the case. We understand management of currency; but we must demand that currency is not so managed as to make deflation a permanent feature of currency administration.

* * *

We are told that trade continues sluggish; that demand for finance is on the poor side; and that, therefore, there can be no reason for any expansion of currency. We admit that trade is poor. We have again and again emphasised that trade demand is negligible. But is there any justification for a Bank Rate of 3½ per cent. and for an inter-bank call money rate of 3½ per cent. while conditions of such sluggish trade are being experienced? We do not ask for currency expansion in order to cause a plethoric supply. We ask for currency expansion only to the extent that is necessary to remove the present unnatural and artificial stringency of money and high level of money rates. Is it proper that excessive sterling purchases are made the instrument for occasioning a stringency that should not be there? In this connection, we may turn to the latest return of the Imperial Bank of India. The Bank has invested Rs. 49½ crores in government securities; in addition it has advanced Rs. 8½ crores on ways and means account. Government obligations thus amount to Rs. 58 crores. As against which, the total of loans, cash credits and inland bills, come only to Rs. 22 crores. The total trade advances at Rs. 22 crores in the current week compare with Rs. 47 crores last year, Rs. 41 crores two years ago and Rs. 48 crores three years ago. No more conclusive testimony to the slackness of trade is needed. The trade has declined so heavily; is there any reason why money should be in such great demand?

* * *

While trade advances have gone down from Rs. 48 crores to Rs. 22 crores in three years, Government obligations in the portfolio of the Imperial Bank have advanced by Rs. 25 crores. In simple terms, the Imperial Bank is not financing trade but is financing the Government. Through this financing of the Government, it has allowed its balances to fall to a low level. Because its cash balance is at a low level, it keeps up the Bank Rate. Money is stringent because the Imperial Bank has lent far more money to a single party than any Bank is justified in lending to a single party, even if that party happens to be a thrice-puissant Government. The Imperial Bank has had to lend money so heavily to the Government because the latter have accumulated heavy balances in London, thereby depleting the balances in India. In such a situation, the normal procedure would be the utilising of the surplus balances in London for transfer to currency reserve and creation of currency in India thereagainst. This normal procedure would have been followed by the Government if the Imperial Bank had not been too yielding in its accommodation to the Treasury. It is up to the Bank to tell the Government straight and square: "We have too heavy an investment in Government obligations. This is unsound banking. This is not healthy to the money market. This causes unnatural stringency. Do take immediate steps to return your short loans. We must have at least Rs. 10 crores back this week." If the Imperial Bank authorities took a firm and curt attitude of this kind, the Government will not be able to evade the plain and straightforward course of currency expansion, the need for which is all the greater as a portion of the funds from the money market has gone to up-country parts in respect of "distress" gold and as the funds which have been sent up to the mofussil will take time in finding their way back to the money market proper.

ASSEMBLY DEBATE ON ECONOMIC PLANNING

The Assembly debate on Mr. James' motion on "Economic Planning" has proved to be a dead squib. In the first place, it is too much to expect that the Government and the Assembly, as they are now constituted, would make any decision on such a radical question as "planned economy." But one would have thought that those who participated in the debate would at least be able to point out the disabilities from which they, for their part, suffered from the utter lack of plan in Indian economy. The European business interests surely have, despite their century-old tradition of individualism, many a point to urge in favour of a planned economic policy. While amongst Indians those who have been affected most are the dumb masses, who are yet a stranger to agitation and effective lobbying in the Assembly, the European businessmen are in a position not only to influence policy but also to make definite suggestions as to how the departure from *laissez-faire* should be made. The case of jute in Bengal is an obvious instance. Tea has just had legislative sanction to its system of export quotas; but control of production might soon be found necessary and might require the action of the State in that behalf. Coal cannot survive, unless the industry works according to a definite plan resting not solely on the goodwill of the coal-owners for its observance. Minor industries in which British capitalists are often more interested than Indian, have their problems. And above all, British businessmen have found that the economic prosperity and progress of India are vital to the preservation and furtherance of their interests here and at home, though formerly, they laid insistence on this question more with a view to divert attention from measures like the Coastal Reservation Bill than out of a realisation of what India's prosperity means to their own interests.

* * *

Thus there are specific points on which the European members of the Assembly could have dwelt to great effect and to the advantage of themselves and the country at large. And we confess that we are disappointed to find that none of the European members dealt with the question from a practical standpoint. And this disappointment is all the keener, as Mr. F. E. James, the mover, seems to have spoken in a representative, rather than a personal, capacity.

* * *

We are prepared to believe that when larger questions of policy and principle are under discussion, it would have been out of tune to refer to the conditions of particular industries. But the larger questions, too, have been tinkered with, the non-official members plunging themselves into administrative details, and the official spokesmen making the most of administrative difficulties and thereby practically begging the question. Mr. James' motion was that the demand under the head "Executive Council" be reduced to Rs. 100 in order to draw the attention of the Government to the necessity of meeting the need for economic planning by means of (a) redistribution of Government portfolios, (b) consideration and consolidation of tariffs in force in the country and to be imposed in the future, (c) formation of Economic Advisory Council and (d) revision of trade agreements.

* * *

There can be no questioning the aptness of the outlines of the motion. Its scope is wide, its provisions are pointed, and it is suggestive of the many problems which are of urgent immediate importance. The view has been expressed in some quarters that the acceptance of Mr. James' proposals in their original or slightly altered form would involve, not only additional burdens on the taxpayer, but also the danger of the country being subject to the tyranny of a number of "expert" bodies, of which two at least are already in an embryonic stage, the Statutory Railway Board and the Reserve Bank. We are afraid both these dangers have been unduly exaggerated. As for the burdens on the taxpayers, much of the administrative change called for in the interests of economic planning can be effected without additional expenditure. Only the new kinds of activities entail a fresh outlay; and for our part, we would consider it only an investment, which, if it were properly worked, would yield a return out of all proportion to the capital. If the proposals were such as to command the confidence of the country, no one in this country would grudge the expense. And as for the tyranny of experts, we affirm it is the duty of the electorate to send representatives to the Legislature who

would put the most competent and the most arrogant of experts in his place, as a servant and a tool of, and not a dictator to, those on whom the direction of public policy ultimately rests. It is a different question, however, whether the Assembly in the reformed constitution would be able to bring such control to bear on the experts.

* * *

The difficulties of the time cannot, however, detract from the importance of thinking out how economic planning has itself to be planned. And the best approach would be to regard the national economy as falling into four distinguishable, though closely connected, departments, namely, agriculture, industry, transport and trade and commerce. In most other countries of the world, the State has been more reserved in the sphere of agriculture and industry and comparatively more active in transport and trade. Mr. James' remarks, we find, referred more to the last two, the first two being shoved into the background. He still seems to believe that if industry and agriculture are to be helped at all, it is not directly but indirectly through the revision of tariffs and trade treaties. So that Mr. James, who started with economic planning of the widest scope, found himself asking for only a few administrative changes and a revision of the trade treaties. The Economic Advisory Council becomes a mere pious aspiration.

* * *

We believe that the Economic Advisory Council will never pass the stage of a mere aspiration, if we try to construct it by reshuffling the portfolios of the Viceroy's Executive Council. Economic policy and Economic Council must alike be more of a natural growth. The policy must be evolved during the course of a continuous study of related problems by permanent bodies specifically charged with the work. And the Economic Advisory Council must be the result of coordinating such permanent bodies in a committee composed mainly of the heads of such bodies. Almost all those who spoke on Mr. James' motion stressed the necessity of bringing commerce and industry under one portfolio and making the beginnings of a Board of Trade, as also the unification of authority on questions of transport. But such changes can only enable Government to take action, without doing much to decide what should be the proper line of action. It is of the highest importance that the country must know on what body of experts it would have to rely for guidance in each set of questions. We believe that the beginnings of a planned economic policy and an economic advisory council alike lie in such bodies as the Tariff Board, the Railway Rates Tribunal and the Institute of Agricultural Research. A little reflection will show that given time and an expert personnel, the three bodies would have scoured the whole ground of India's national economy, except where the purely financial and monetary problems are concerned. The Tariff Board would have ascertained the needs of India on account of her industry and what is more, would have made a special study of the problems connected with tariffs and commercial relations with foreign countries. The Institute of Agriculture may be relied upon to master the problems of agriculture and the staple crops in particular. And a Railway Rates Tribunal—the word Railway is used more with a view to employ a familiar term, than restrict the scope of its investigation to the railways—will before long have examined the problems of transport. It is out of material like this that any useful attempt to construct an Economic Advisory Council can be made. We are concerned with the framework of the Council rather than its appendages or embellishments. Mr. James pleaded for the representatives of banking, industry, etc., finding a place in these councils and committees. Experience has shown that the representative principle in the formation of committees, be it on a communal or other sectional basis, is a failure, unless care is taken to ensure that the bulk of the members have some expert guidance to rely on. While we see no reason to oppose the suggestion that these expert bodies or the Economic Council should have power to co-opt or should be expanded by additions on a representative basis, we wish to urge that these bodies must have a solid foundation of expert personnel on which to rest.

* * *

An examination of the history and prospects of the Tariff Board will make our point clear and incidently draw attention to some of the dangers with which we have reason to believe, this useful institution is threatened. The Fiscal Commission envisaged the Tariff Board as a permanent body, with a variety of functions, some of them to be discharged on the directions from time to time of the Government, and the others continuously on its own initiative.

* * *

We extract below the list of functions from the report of the Fiscal Commission.

> (1) To investigate the claims of particular industries to protection, and, if satisfied that protection is required, to recommend the rate of protective duty, or any alternative measures of assistance such as the grant of bounties.
>
> (2) To watch the effect of protective duties or other measures of assistance on industries; to review periodically the results of such protection on each industry, and to make recommendations when necessary for the modification or withdrawal of protection.
>
> (3) To investigate the relations between the rates of duty on raw materials, partly finished products and finished products; to make recommendations for adjustments in these rates, and to suggest solutions for conflicts of interest between different industries.
>
> (4) To report which industries need assistance on the ground that they are essential for purposes of national defence, and in what manner such assistance can most conveniently be given.
>
> (5) To enquire into allegations that dumping is taking place to the detriment of any Indian industry, or that any Indian industry is being injured by competition resulting from the depreciated exchange of any foreign country or from export bounties, and to make recommendations for any action necessary.
>
> (6) To consider the effects of excise duties on Indian industries.

(7) To report on what commodities revenue export duties can safely be levied and at what rates.

(8) To consider the effects of *ad valorem* and specific duties and tariff valuations on various articles, and to make recommendations for any changes that may be desirable.

(9) To consider to which articles preferential rates of import duty in favour of the United Kingdom might be extended and what the preferential rates should be.

(10) To report on proposals for preferential agreements with any of the British Dominions or Colonies.

(11) To investigate questions in connection with the treatment of Indian products by foreign countries and the advisability of taking any retaliatory action in special cases.

(12) To investigate any complaints regarding combinations of manufacturers to the detriment of the Indian consumer and to make recommendations for any necessary action.

(13) To watch generally the effects of the tariff policy on the cost of living.

(14) To study the tariff systems of other countries.

A glance at the above will show what a position the Tariff Board was intended to occupy in the fiscal system of the country. We are not aware that the Government have at any time disclosed the reasons which led them to deviate from the recommendations of the Fiscal Commission. But whatever the reasons may be, there can be no doubt that, if the recommendations had been followed, the Tariff Board would by now have gathered knowledge and experience invaluable to the organisation and functioning of an Economic Council. We attach special importance to the task of watching the effects of the import and excise duties on foreign trade and indigenous industry. The experience of the negotiations regarding the Indo-Japanese Trade Agreement shows that the Government of India do need to have a body of experts who have thoroughly mastered the questions and who are in a position not only to make suggestions but appraise the probable effects of proposals that might be made by the other party.

* * *

Instead of utilising the Tariff Board for this purpose and training a band of Indian officials in this all-important task, the Government have consistently delimited the sphere of the Tariff Board. The system of periodical renewal of appointment even gives rise to the doubt whether on the expiry of a particular enquiry, the Board would not be abolished. We urge that the time is come when the permanency of the Tariff Board should be established beyond doubt. And when the temporary incumbents have been replaced, the tenure of office of the Chairman and the members must be made analogous to that of the judges of the High Court. While discussing the question of the salaries of the Tariff Board members, the Fiscal Commission recommended that "no scale lower than that at present in force for judges of the High Court would meet the case." Considering that the Board will often have to give verdicts unpalatable to the authorities both at present and in the future reformed constitution, we consider it of the greatest importance that the members of the Tariff Board should have protection from official displeasure.

* * *

The Tariff Board run on the lines indicated could within a short time lay enduring foundations for an economic policy and provide the *personnel* for an econmic advisory council. To return to the functions of the Tariff Board, one would have thought after the perusal of the Fiscal Commission's report that the Tariff Board would have had a large place in the conclusion of the Imperial Preference agreements, the Indo-Japanese Trade Treaty and the Lancashire Pact. On the other hand, the recommendations of the expert board had to be modified in order that they could be brought into line with the trade agreement and the Mody-Lees Pact. One wonders how an intelligent fiscal policy can be evolved, if tariffs are levied and changed to suit at once a Tariff Board report, a trade agreement and an understanding arrived at between two private parties. It is high time that the Legislature insists that, before any commitments in respect of tariffs are undertaken, the Government ought to procure the considered opinion of an expert body like the Tariff Board. It is necesary also that, before full effect is given to the recommendations of the Fiscal Commission in their original form, the necessary changes in the strength and *personnel* of the Tariff Board should be made. For it is only when the Board has enough men in its ranks to cope with the increased work, that it can do justice to all functions with which it will have to be entrusted. It is surprising that during all the long-winded discussions in the Assembly, there was hardly any one to call attention to the manner in which the

PUBLICATIONS OF THE LEAGUE OF NATIONS

Just out WORLD ECONOMIC SURVEY, 1932-33

348 pages ... ... Price: bound in cloth Rs. 5 8 0

The Survey for 1932-33 begins with a description of the revival of economic activity in the autumn of 1932 after the Lausanne Conference and covers the period up till the close of the first session of the Monetary and Economic Conference at London twelve months later. The story is thus brought up to the end of July 1933.

As in the previous Survey adequate use is made of statistical information regarding prices, production, international trade, public finance, wages, employment, profits, etc. collected from all over the world by the Economic Intelligence Service of the League of Nations. Despite the wealth of material thus made available, the Survey, like its predecessor, is a clear and connected story of recent developments valuable to the specialist for its scope and accuracy, and equally to the layman because of its clarity.

The American banking crisis, the movement towards reduction of hours, the situation regarding international indebtedness, the magnitude of agricultural stocks compared with current production, the decline in international trade, the recent rise in prices and recovery of production, are among the subjects of topical interest surveyed in this volume.

WORLD PRODUCTION AND PRICES, 1925-32

155 pages ... ... Price: Rs. 2 12 0

This volume contains an analysis of the changes in the world output and stocks of raw materials and foodstuffs, in the world's industrial activity and, finally, of price movements and relationships. It includes the index number of world production of raw materials and foodstuffs calculated by the Economic Intelligence Service of the League and international index of industrial production, together with abundant statistical material, *e.g.*, national industrial production indices for some 20 countries, data comparing production of investment and consumers goods, and indices of activity of some 15 important groups of industry in a large number of countries.

The chapter on prices contains an analysis of the movement of wholesale prices in various groups of countries; comparisons are made between the evolution of gold and sterling prices, raw materials and finished products, international and domestic goods, investment and consumption goods, etc.

The chapters on production cover the years 1925-1932, and, where possible, the first quarter of 1933. The discussion of price movements has, where figures were available, been brought up to May, 1933.

Government have sought to narrow the sphere of Tariff Board and to reduce its influence on our fiscal policy.

Now that excise duties are to be levied on some of the protected industries, it is highly necessary that there should, as the Fiscal Commission contemplated, be a Board to watch the effect of the protective and excise duties on the growth of the industries concerned and take timely action without waiting for the industries to be driven to the necessity of asking the Government for help. Will our legislators take the opportunity of the debate on the sugar excise and matches excise bills to raise this question and effect the long-overdue reform?

* * *

We may now turn to the two other bodies, which we mentioned in this connection, namely, the Railway Rates Tribunal, and the Institute of Agricultural Research. It is well-known that what was originally intended to be a Railway Rates Tribunal was whittled down into a Railway Rates Advisory Committee. That the Government have never taken this body seriously is also well-known. But it is quite necessary, if our transport system is to subserve the ends of industry, that the Railway Rates Tribunal should be as competent and authoritative a body as the Tariff Board has proved to be in spite of all the handicaps that the Government have imposed on it. Owing to the failure of the Railway Rates Advisory Committee to inspire confidence, the rates questions have tended to recede farther into the background. But there can be no doubt that many questions will come forward, as soon as the Government make it clear that the status and *personnel* of the committee have been improved and Government are going to abide by its recommendations. It is only when the railway rates questions are studied continuously that the Ministry of Transport, of which our legislators have begun to dream a little too prematurely, can at all render any useful service.

* * *

As for agriculture, it is too easily presumed in this country that its problem at present is one more of gaining foreign markets than of internal rationalisation. So far as the Institute of Agricultural Research is concerned, it has during these years confined its attentions to the problems of research. But we have reason to believe that the Institute has gained much first-hand knowledge and experience of the problems of agriculture. And we believe, therefore, that, if so directed, it would not be difficult for the Institute gradually to acquire the knowledge necessary for functioning as the inspiration and director of new constructive movements in Indian agriculture. And as for foreign markets, a Tariff Board working on the lines we have indicated would be able to suggest trade treaties with foreign countries which will appreciably improve the chances of India's agricultural products in the foreign markets. It would be futile to attempt to give in detail all that these three bodies might achieve. Our purpose is rather to emphasise that it is only by building up sound institutions like these that the true foundations of a competent economic council can be laid. And it is depressing to reflect that what little was attempted by Mr. James in his motion in the Legislative Assembly last week should have come to nought and economic planning left as far away from us as ever.

EVOLUTION OF STATE POLICY

An examination of the stages in the evolution of public policy would throw light on a number of problems germane to the enquiry in which we have been engaged during the last few weeks. That public policy cannot leave aside any aspect of social affairs, be it economic in the sense of sordidly material, or cultural in the sense of pertaining to the inner life of society or individual, we have endeavoured to prove in the last two weeks. It is well-known that the policy of many a State, ancient and modern, has been directed to the attainment of ends which are not political in the purely conventional sense. How such ends came to be accepted as the legitimate objectives of State endeavour should be an interesting and useful enquiry. It may be easily granted that the great movements of history did not derive their origin from what may be called a mass suggestion. Some mind, gifted with an insight into contemporary social conditions, and capable of sensing the wrongs and dangers that are in either a fully developed or an incipient stage, makes the first move towards a proper apprehension of the danger. It also makes a tentative suggestion as to the remedy. Zeal always goes with vision; and the mind that sees an evil to the public as a whole often possesses the capacity to gather to itself an increasing number of adherents in opposing the evil. The next stage is propaganda carried on by more or less disinterested followers of the evangelist. The interests which are threatened by such propaganda set up a counter-propaganda; and it is then that the dynamic idea passes into the stage of politics. Given a healthy political atmosphere, it would not take long for the idea to be incorporated into a policy of the State, enjoying all the prestige and power which law can confer, that is, if the idea is intrinsically sound, and if the people who have to make the decision are able to make a proper choice. If, on the other hand, the idea is unsound, it would be scotched in the heat of open discussion and could survive only amongst a small group of fanatic partisans who would be hunted down by the law and by a hostile public. The test of healthy politics is the time which a sound idea takes in its passage to the Statute-Book.

* * *

The obstacles which the idea has to overcome are many and varied. It has at first to combat the natural conservatism of the human mind. Except in sartorial fashions, in all other matters, the new is almost invariably hated. And among the intelligentsia, resistance to new ideas is in direct proportion to rank and circumstance. Government, by its very nature and by virtue of its being charged with preservation of order in the interests of one and all, has necessarily to be intolerant of new ideas; and there are few countries in the world which have valued, or succeeded in safeguarding, freedom of thought and speech. Where these rights are denied, the chances of a new idea gaining the acceptance of a widening circle of citizens are very slender. And if this stage of first hand propaganda is passed and the idea gains a comparatively large association of enthusiastic followers, the gain in following is more than balanced by the stiffening of the opposition. No longer can the association work in secret. Its activities have to be carried on in the light of publicity. The principal leaders are exposed to the tactics of the opposition; and the followers might conceivably be subjected to many a disability and even indignity. Stormy and disorderly public meetings, campaigns in the press, intrigues in the dark, corruption, intimidation all these together make up the throes, which an embryonic social purpose will have to undergo before it can pass into an acknowledged policy of the State.

* * *

All this is the day-to-day experience of politics. What we are concerned to note is that the "dreams" and "visions", of which Prof. Zimmern speaks in *India Analysed* cannot be turned into enduring realities unless the dreamers and the visionaries turn themselves into active politicians and secure the help of Society and the State in realising their ideals. Wilberforce was among the first to recognise the horror and inhumanity of slavery and to dream of a world in which slavery would be a thing of the past. However fervent he might have been, his dream cannot come true except with the aid of an Act of Parliament. Mrs. Browning heeded to the "cry of children", and her sobs broke out into saddest songs; but only the Factory Acts could wipe the tears and give solace and comfort, Ruskin, William Morris and Edward Carpenter have all, however, written and sung in vain. A "Dream" was all their lot; the realities are far, far off.

* * *

The moral of all this is that the idealism of visionaries must pass into practical politics, if human society is to move forward on the path of progress. It is dangerous to assume that in a mere realm of law, as opposed to the citadel of power, the scales of justice are held even. They would often have to be tilted to secure a nearer approach to evenness.

* * *

To take a concrete instance nearer home. Prof. Zimmern's insistence on the realm of law, though, no doubt, disinterested, may well be made to look like a special pleading for a continuance of those economic inequalities which are sought to be perpetuated by the provisions against commercial discrimination contained in the White Paper. We have no doubt that nothing is further from Prof. Zimmern's intention than that. And we trust that we, too, shall not be misunderstood to advocate an indiscriminate use of legal power against foreign business interests in India. What we mean is that the notion of the realm of law might often result from evading the question of what the law should be.

* * *

The State has, thus, unquestionably to pull its weight in securing certain moral ends. Its aloofness from such ends, if it is at all admissible, is conditioned only by the state of public opinion. For, when public opinion is not quite in sympathy with a particular end, it is no use the State exerting itself to secure it. For the essence of morality is volitional choice; and morality secured by coercion is like a contract under duress. In that sense, the common theory that the State cannot have anything to do with morality is valid. But all law is in the last analysis morality; and the element of coercion is defensible only when it is directed against deliberate perversity dangerous to society and when it has the sanction of some public opinion. When a sound objective lacks full public support born out a conviction, as in the case of the Sarda Act in India, a law seeking to secure it by coercion must be said clearly to exceed its limits. While on the one hand it would be tyrranical to accord premature legal sanction to such movements, it would be idle to suggest that these objects can ever be secured without the aid of the law. Statesmanship lies in finding when a popular movement is ripe for being accorded the strength of the law.

* * *

Even more important is the attitude of Government to new ideas and new demands. Nowhere is dogmatism less justified and more dangerous than in the sphere of right and wrong. And no state can persist in a policy of doubtful right, or nip a new idea in the bud. There is sufficient resistance to new ideas in the world as it is; and there is little or no need for legal persecution to strengthen that resistance. To our mind, individual freedom of thought and expression is valuable not so much because the individual should have an inviolable right to think and express as he likes, as because we believe that in every free thought lie the germs of a high social purpose and a humane public policy. The right of free association is indispensable if ideas, pregnant with good for the race, are to be swiftly propagandised and enabled to take their place, in their time, in public policy.

* * *

An adequate theory of politics cannot set any clear limits to the sphere of state activity. There is no benevolent neutrality which the State can be content to preserve in matters which are of common social concern. Economic questions are not, and cannot be, outside its purview. It may be that in some stages of evolution, the common interest could be best furthered by a policy of non-interference. But the decision as to whether it is non-interference or whether it is participation, and to what extent, must rest with the people as a whole. Likewise, in matters which are, broadly speaking, cultural, the State cannot divest itself of responsibility. There is always the danger that an institution like the State is apt to be tyrannical. When institutional religion has come to be condemned by thinkers and when of its own accord it is relaxing its hold on men's minds, it may seem strange to suggest that the State has its duties in this sphere. But there is nothing inconsistent between advocacy of a certain course and a recognition of the possible dangers therein. If man is a social animal, and he can escape a life, "nasty brutish and short", only through society, then the State as the paramount social organisation has to do all it can to help the enrichment of human life.

Hitherto we have been content to point out the evolution of policy from the standpoint of the growth of support and governmental recognition. It is also necessary to examine the practical considerations governing State policy. It is a significant fact, and one which, nevertheless has been largely overlooked, that in the earliest times as in the latest, the State has attempted to do more for the individual than in the intervening periods. Government in the tribal and half barbarian stages was a complete affair, the political ideas of the time finding no place for nice distinctions between politics and economics, between matters material and matters spiritual. Greek city-states had wide notions of the duties of the Government. And in all these, religion was part of the State; and in medieval times a distinction was made only to emphasise their unity in life. Feudalism was an economic order which kept rights and duties closely bound together; and few were left without a place in economic society. In the present times, too, the number of positive functions which the State endeavours to discharge to the individual are legion.

* * *

It is only in the nineteenth century when the world had just lived down the horrors of religious persecution and the blunders of mercantilism that attempts to democrate the sphere of the State and the law were most rife. The wholesome nature of these restrictions in the periods in which they were emphasised cannot be denied. But before conceding any universality to these doctrines, it should be well to examine the cause of the similarity between the period before and the period after. That the tribal systems attempted practically the entire regulation of the life of the tribe can have only one explanation, that it was feasible because of the size of the group, the area occupied and the simplicity of individual and social life. Even for civilised Greece, the same reasons may be said to apply; and in the larger aggregations of later times, the phenomenon is less marked to the extent that the tasks involved were bigger and more complex. The same explanation of feasibility holds good in the case of modern times. Though States and their populations may have grown larger, the vast improvement in technique and equipment has enabled modern governments not merely to keep the peace—perhaps they are doing it less efficiently than some of their predecessors—but also to put the children to school, to preserve public health, to carry out schemes of irrigation to reclaim lands, to win markets, to control production and to discharge a number of functions from which the political theorist and the practical statesman of earlier days would have shrunk back in dismay. No medieval government could possibly have thought of a system of compulsory education or a system of state control of transport or the reduction of acreage under cotton or wheat.

* * *

It follows, therefore, that, while on the one side, the state of public opinion (or in earlier periods, the inclinations of the authorities) set its limits on what the State may do, there is, on the other side, the practical consideration of whether a Government can discharge a function if it were entrusted with it. In other words, the objectives of State endeavour are governed, as in the case of individuals, only by the will and the way, not to speak of the intrinsic value of such objectives.

In reconstructing social ends and State policy, we have, therefore, to sweep aside the restrictions with which they were hedged during the period of individualism and take into account the vast expansion that has taken place during the modern age in human knowledge and equipment. It is quite possible to frame a scheme of life for the individual, which is complete in all that society and state could do for him and which would, far from cramping individuality, only enable it to develop all the better. A state exerting itself towards the realisation of such a scheme would be rewarded with the deepest loyalties of which the individual is capable, and which he never gave to the King or the Pope, to the feudal overlord or the industrial employer.

PIRIM

"Eavesdropper" writes:

Pirim has been the talk of the town. Editors of local papers have vied with one another in singing the praise of Pirim. Capitalists have shown avidity to pay any price and secure the Indian rights of Pirim. Throngs of curious visitors have been visiting the Great Eastern Hotel, importunate to get admission to the private exhibition of Pirim. Artists and connoisseurs have lustily welcomed Pirim. But, as my stenographer asks, what is Pirim? Pirim stands for "Portraiture In Relief In Metal." As with all definitions, this one does not, I am sure, take you far in the understanding of what Pirim is. Giving definition up as hopeless, I may essay description. Pirim has been variously described as a three-dimensional photograph, the conversion of an ordinary photograph into a permanent picture in bold relief in whatever metal is best suited to the subject or theme, a new piece of photographic magic, a very revolution in photography, happy blend of the art of the sculptor, the painter and the photographer, the reproduction in metal, untarnishable and indestructible, of a portrait, a scene or a group, from an ordinary photograph. This is varied enough description. But is Pirim any the clearer to you? All that I can say is that the beauty and realism of Pirim can be realised only when you have seen it.

* * *

Cowper went into ecstasies over the art of the photographer. Were he alive to see what Pirim is like, he would have confessed that his Muse was not equal to sing the beauty or joy of this new invention. An ordi-

The match excise and sugar excise proposals, which are the exciting features of the 1934-35 budget of Sir George Schuster, have led to piquant, and, in a sense, poignant enquiries. Will the excise duties be leviable only on the production as on or after April 1, or will they apply to sugar and matches manufactured prior to April 1, but stocked in godowns within the factory premises? Or will the duties be applicable even to stocks owned by companies but stocked in godowns outside of the factories? I have had any number of personal calls and telephone calls for the clarification of the position in this regard. Fortunes can be made or lost according as the factory in question adjusts or fails to adjust stocks in relation to the final plan of action decided on by the authorities. So far as I am aware, the lapse of a month between the announcement of the levy of an excise or customs duty and its actual coming into operation is unprecedented. The usual procedure, we are acquainted with, is for such duties to take effect from the date on which the Budget pronouncement is made. It is only on the present occasion and only in regard to the excise duties, that the factories have been given a warning fully a month ahead. The interregnum leads, on the one hand, to hectic output, while the immunity from the excise remains still in force ; on the other hand, it occasions no less feverish activity in regard to all those manipulations, manoeuverings, and adroits adjustments that would ensure that the increased production of this period does not, by any mischance, become liable to the impending penalty of a heavier imposition from the Government.

* * * *

One may be sure that the output from match and sugar factories during the current month would constitute a record production, being perhaps two to two and a half times the average monthly manufacture. To the extent that the new duties have thus induced accelerated production, the realisations therefrom in the twelve months of the next financial year would be equivalent to what would be paid in a ten-months' working. But the Finance Member had, perhaps, no help in this matter. The organisation and machinery for administering the duty had to be created ; and the Finance Member had no magician's wand which could cause such a machinery to arise in an instant. The co-operation of Provincial Governments had to be requisitioned; elaborate calculations, detailed instructions and careful exchange of views on plans were necessary to ensure that the administration of the duty would be evasion-proof.

* * *

While the delay of a month between the announcement of the duties and their effective operation was thus deliberate, I do not know whether there was an equally deliberate motive in the paucity of information as regards the *how* of the excise. If the duties are to be applicable not only to the output on or after April 1, but to stocks made prior thereto but retained in the godowns of the factories, the owners would have to arrange for the removal of the stocks to some godown or other situated outside of the factory premises. If the duties are to be enforced not only on the stocks in the premises but also on the stocks in the other godowns of the factories wheresoever such godowns be situate, arrangements would naturally be made for the disposal of more or less the entire output to selling agents or to other outside buyers. It is the vagueness of the position in this behalf, that had made manufacturers of sugar and matches so frightfully eager to get a definite answer to the queries posed at the beginning of this gossip. With a view to give a useful lead in this matter, I have been at great pains to study the Bills introduced in the Assembly for the providing of "the imposition and collection" of excise duties on sugar and matches.

* * * *

Clause 3 in both the Sugar Excise Bill and the Match Excise Bill merits careful study in this regard. The relevant clause in the former runs as under:

> "A duty of excise at the rate of one rupee and five annas per cwt. shall be levied on all sugar produced in any factory in British India and either issued out of such factory on or after the first day of April 1934, or used within such factory on or after the said date in the manufacture of any commodity other than sugar, and shall be payable by the owner of the factory."

* * *

Clause 3 of the Match Excise Bill reads as follows:

> "A duty excise at the rate specified in Section 4 shall be levied on all matches manufactured in any manufactory in British India and issued out of such manufactory on or after the first day of April, 1934, and shall be payable by the owner of the manufactory."

* * * *

The emphasis in either case is not on manufacture on or after April 1, but on issue out of such factory or manufactory on or after that date. This may, therefore, be said to make it quite clear that stocks in the factory, even if they pertain to the output of an earlier period than April 1, shall be liable to the excise. Equally is it obvious that Indian-made sugar held anywhere else but in factory premises will be exempt from the duty. Nor is there any mention of outside godowns in any other

section of the Bill or in the rule-making powers provided in the last clause. In this context, I must refer to the exchange of telegrams between the Indian Sugar Mills Association and the Government of India. The following telegram was sent on March 13 by the Association to the Hon'ble Finance Member, Hon'ble Commerce Member and the Hon'ble Industries Member:

> "Indian Sugar Mills Association strongly request Government issue press *communique* immediately clearing position regarding exemption from excise duty on sugar produced before 1st April, although issued later from factories. Unless *Communique* immediately issued factories suffering heavily due to fall in prices consequent on selling pressure request immediate announcement."

To which the following reply was sent on March 14:

> "Cannot comply your request proposal of Government is that sugar produced before first April but issued later from factories should not be exempted."

* * *

While the intriguing conundrums as regards godown location and liability to taxation may now be considered as definitely solved, other matters connected with the Sugar Bill have become fit themes for speculation and subdued but recurring rumours. Will the excise duty of Rs. 1-5-0 per cwt. be passed in the Assembly without any reduction or abatement? Will the Khandsari manufacture of sugar be left untouched by the duty, as now proposed? Or will an attempt be made, on a more correct appreciation of the relevant factors, to bring Khandsari sugar into tht present taxation scheme? If so, will it not enable the Finance Member to secure his total requirements from a lower excise duty? In simple terms, is there not a strong case for imposing the excise on factory sugar as well as on Khandsari sugar, and for reducing,, as a consequence, the duty from Rs. 1-5-0 per cwt. to, say, twelve annas per cwt.? From the reports I have been receiving from New Delhi, the joint deputation of the Indian Sugar Mills Association and the Indian Sugar Producers' Association which waited on the Members for Industry, Finance, Commerce and Agriculture and on the Financial Seceretary, would appear to have created a good impression about the justness of their case and the constructive spirit inspiring their criticism. The Punjab and the U. P. Governments have, I gather, made it clear to the Central Government that the excise duty in the proposed form and at the proposed rate would seriously jeopardise the economic interests of provinces which have witnessed heady activity in the matter of larger utilisation of sugarcane for manufacture in modern factories. Those provincial governments, which must be allowed and are entitled to, the biggest say in this matter, seem definitely opposed to the present scale of duty. Sir George Schuster cannot afford to brush aside their views lightly.

* * * *

On the side of the industry, the representation made to the Government is backed by two powerful associations, one consisting predominantly of Indian interests and the other of European interests, so that an unusual unanimity among sections ordinarily divided lends special emphasis and irresistible force to the case put up to the authorities. The Associations, between themselves, represent no less than 72 white sugar factories in British India—and, I may add, quite a few factories in Indian States are also members of the Association and are, doubtless, in agreement with the views put forward in the memorandum. Here then is undoubted weight and powerful authority attaching to the counter-proposals which have been submitted for the consideration of the Finance Member; and there is, surely, every need for a review of the position and, if necessary, a re-shaping of the proposals, in the light of the facts and figures, arguments and pleadings urged from such influential quarters.

* * *

Sugar factories in India are members of one or the other of the two associations. The Sugar Mills Association has its headquarters in Calcutta while the Sugar Mill Producers' Association hails from Cawnpore. The Chairman, Mr. Padampet Singhania and Mr. D. H. Pel Yates have made out, on behalf of their respective organisations, a cogent and convincing representation, the main purpose of which is to show that the return at present enjoyed by the Indian white sugar industry falls far below the degree envisaged by the Tariff Board and that in the event of producers being compelled to bear the full amount of the proposed excise duty, the industry will find itself in a most difficult situation. The aim and object of the Indian Sugar (protection) Act of 1932 was "to provide for the fostering and development of the sugar industry for a period ending March 31, 1946." It was the intention and hope of the Tariff Board, in making its recommendations in this behalf, to foster such conditions and afford such protection protection as would induce the launching of sugar enterprises in such numbers as to make India self-supporting within the period of protection.

* * *

The hopes of the Tariff Board have been realised in a far more striking manner than one would have thought possible three years ago; and the situation to-day is just what the Tariff Board anticipated would be the case towards the closing years of the protection *regime*. It is claimed that the development has been so rapid that "the country is now considered to be almost self-supporting and, in fact, has practically reached the stage envisaged by the Tariff Board at the end of the protection period." It was the assurance of protection for a period of fifteen years that was responsible for the big strides which this industry has taken. Rs. 15 crores has been invested; and three main agricultural provinces have been transformed into important industrial units. The industry is now responsible for the employment of between 80,000 and 90,000 factory workers, 1,000 to 1,500 graduate executives, a very considerable employment among bullock carters, and revenue to railway and other transport services. It produces and consumes 60 lakhs of sugarcane each season, paying for its raw material no less than Rs. 6 crores. An annual drain of a sum of Rs. 12 crores, which represented the average imports of foreign sugar, has been more or less completely stopped. Nor could it be said that these benefits to special interests have been at the cost of the consumer.

* * *

From the point of view of the consumer, the following table is furnished in the memorandum, illustrating the prices which the Indian consumer would have to pay (*a*) for Java sugar, (*b*) for Indian sugar at the average value recommended by the Tariff Board (Rs. 8-13-1), and (*c*) for Indian sugar at the price actually ruling in February. (The consumption is estimated at six lakhs of tons; and in

each case, Rs. 1 per maund has been added to the factory or port price for freight to consuming centres).

Java Sugar @ Rs. 10 2 per maund plus freight 6,00,000 tons	Tariff Board Recommendation @ Rs 8-13-1 plus freight. 6,00,000 tons	Actual price in February 1934 @ Rs. 7-12 plus freight. 6,00,000 tons.
Rs.	Rs.	Rs.
18,02,25,000	15,90,46,870	14,17,50,000

The conclusion is drawn, from the above table, that the domestic industry has, on account of internal competition, brought down sugar prices to such an extent as to result in India getting her supplies of sugar at a saving of Rs. 3,84,75,000 below the present Java price and of Rs. 1,72,96,870 below the average price recommended by the Tariff Board.

The sugar industry is almost the only industry in which the policy of protection has been fully vindicated from every point of view and justified by every criterion. Protection has fostered enterprise. Protection has brought out capital in an abundant stream. Protection has stimulated internal competition. Protection has not been accompanied by higher prices payable by the consumer but has actually made sugar available at cheaper prices. Protection has made India self-contained in the matter of factory sugar. Protection has stopped the drain of a large sum annually to foreign countries. Protection has benefitted the agriculturists, increased the wealth of an important cash crop, afforded some relief to unemployment, and effectively safeguarded the consumer. The experiment of protection in the case of sugar has been progressing so propitiously that it was the duty of the authorities to feel proud and gratified and to do all that was necessary for emphasising and underlining this progressive record. Instead of which, we find the Finance Member seeking to nip the industry in the bud.

Knowing as I do the ways of the framers of budgets and makers of taxes, I have no hope that, even if convinced of their folly, the Government would retrace their steps. One has, therefore, to reconcile oneself to the excise duty as a settled fact. But it is necessary to urge that new plans should be devised whereby the harm done would be minimised. From this point of view, the representation of the Sugar Mills Associations makes a valuable suggestion. As regards the Khandsari Industry, there can be no justification for its being excluded from this duty. "The Khandsari Industry is estimated to represent one-third of the total sugar output. The exclusion of this portion of the industry can only react as a further depressing influence on the market price of sugar in India. This discrimination to the disadvantage of one section of the industry is a breach of the equality of treatment implied for all classes of the industry, when the protection was granted under the stimulus of which the Factory Industry has expanded. It must be pointed out that the Khandsari manufacturer is not an agriculturist, but an industrialist, whose raw material is purchased-juice instead of purchased-cane."

The minimum that should be done under the circumstances is for the inclusion of the Khandsari industry in the proposal for the levying of an excise and a proportionate reduction in the incidence of duty. When one section of the Indian textile industry came to an agreement with the Lancashire Delegation in the teeth of opposition from other sections of the textile industry, the Government of India showed indecent haste in giving legislative sanction to a pact so arrived at. In the case of the sugar excise, the representation is backed by the entire body of European sugar producers and Indian sugar producers in this country. The plea urged by them receives powerful support from two important Provincial Governments who are vitally interested in this matter. Will the Government show equal readiness and decent haste in responding to an appeal so eminently just and reasonable?

(From Our Correspondent)

Bombay, March 14, 1934.

Bombay is pricking its ears to catch every whisper in New Delhi about the discussions between the Governor of Bombay and the Central Government; but so far to no purpose. It is certain that Lord Brabourne must have gone through the whole gamut of Bombay's financial and economic position, and particularly, the problems that now agitate the public mind here in this city. It is too much to expect so soon after the conference between the heads of the Central and Provincial governments that anything should be definitely known about what passed between them. Meanwhile, it is very intriguing to learn that the visit of the Bombay Governor to the Imperial Capital has been commented on by the representatives of other provinces as evidence of a deep-laid plot in which Bombay's people and Governor have colluted to mulct the rest of India of their lawful moneys. Too easily is it forgotten that a new provincial governor has to take the earliest opportunity to get into personal touch with the representative of the King Emperor or that the time of his visit had been fixed nearly two months before Sir George Schuster chose to create the cheap sensation of a dog-fight between Bengal and Bombay.

In one sense, it is well that this meeting between Lord Brabourne and Lord Willingdon should have come about at this juncture. For the respective sides could well be expected to put forth their case at its best and the Central Government, too, would be impressed with the depth of feeling in the provinces on questions like these. Another circumstance tending to enhance the significance and value of the Governor's visit to New Delhi is that the official member for Bombay in the Assembly was prevented from participating in the debate and representing what might be presumed to be the standpoint of his Government on the questions that came up before the assembly. It would have been very helpful to the non-partisan members of the Legislature to learn what the official member has to say side by side with the forensic denunciations of Mr. H. P. Mody and Sir Cowasjee Jehangir. Unlike on earlier occasions, the Bombay official member would seem to have on this occasion come under an official ban. In view of this disability imposed on Bombay it is well that Lord Brabourne's visit should have come at this time. The occasion is also apt for Sir George Schuster to implement the promise, he gave in reply to Mr. H. P. Mody's allegations against the Kathiawar ports, of discussing this question with the Bombay Governor. Considering that Lord Brabourne has the whole of his term of office before him and that the recent proposals of the Central Government are a crushing handicap on his race for financial success, it is impossible that Lord Brabourne has missed this opportunity of opening the eyes of the Central Government to Bombay's claims both to justice on the merits of the case and charity in consideration of her plight.

While Lord Brabourne has probably prepared the ground for Government making its contribution to the solution of the problem of diversion of trade, the Port Trust and the Railways have already taken a definite step forward towards the same end. The Port Trust has provided in the budget, which was duly approved by the Trustees on Tuesday last, for a reduction of the freight and wharfage charges on cotton, a measure involving a surrender of Rs. 6 lakhs of revenue on the part of an institution which is by no means in affluent circumstances. It will be remembered that at the Conference between the Port Trust, the Municipal Corporation, the Railways and the Government for consideration of the questions arising from the diversion of cotton trade, the Port Trust and the Railways offered definitely to do their part, if the Corporation and the Government should see their way to abolish the town duty of Re. 1 per bale. Even now, the proposal of reducing freight and wharfage charges on cotton is provisional on the abolition of the Town duty, though one might feel confident that ultimately in spite of the difficulties in the way the Town duty would be abolished. The specific measures in this connection are the reduction on the docks export wharfage charge from 12 annas a bale to 8 annas and abolition of the Port Trust Railway inward freight of 1 anna a bale. These reductions would represent a normal loss of over Rs. 6 lakhs a year in Port Trust Revenue and would involve a corresponding deficit in the Port Trust budget for 1934-35 which would have to be provided for in the revised estimates by withdrawal from the Revenue Reserve Fund. Taken together with the measures announced to-day by the G.I.P. Railway and the prospect of the abolition of the Town duty, the action taken by the Port Trust is, indeed, a very considerable and timely relief to the hard-pressed cotton trade of this city.

The Port Trust budget for 1934-35 is notable for its accompaniment of a spirited defence on the part of the Chairman of the Trust of the financial policy and achievement of the Port. That compared to the Port Administration of your city, Bombay has far less to grumble about and has even something to be positively grateful for, no one will dispute. But Mr. W. R. S. Sharpe has painted a very glowing picture not of the Port's finances so much as the Port's financiers.. His case rests, firstly, on the fact that the Port Trust was the first public body in India to undertake retrenchment on a wholesale scale, which, perhaps, is more a reflection on others than a compliment to Bombay! Secondly, for ten years the Bombay Port Trust has effected no increase in charges until the imposition of the 12½ per cent. sur-tax in October 1932. And it must be remembered that, though the surtax was estimated to bring in Rs. 15 lakhs, the Port has already given back to trade Rs. 5¾ lakhs in the shape of remission of ground and shed rents, to which must be added Rs. 6 lakhs of the now-proposed reduction on cotton. If we consider the extent of the retrenchment effected, it should be remembered that the Port Trust's record should be examined only in relation to the controllable expenditure; and judged by this criterion, expenditure has been reduced by Rs. 44 lakhs a year or 33 per cent.

And all this has been done in a period in which revenue dropped by 25 per cent. and the tonnage never touched the pre-war level. The best result recorded was in 1922-23 when the total volume was 6,835,000 tons. In 1929-30 it was 6,688,000; and by 1932-33 it had declined to 4,689,000 tons. It is natural, therefore, that on a tonnage basis the present charges are roughly double the pre-war charges. And yet, as the Chairman claims, Bombay's ratio of working expenses to income exclusive of debt charges is by far the lowest of any of the ports of India. As for the debt charges, the outstanding fact in favour of the Port Administration is that since 1924-25 no capital loan was raised and the Port has managed for a whole decade without new borrowing. The capital debt of the Trust reached its peak of Rs. 22.61 crores in 1925-26 and, thanks to the avoidance of new loans, repayment of the earlier ones and utilisation of surpluses in the sinking funds, the annual debt charges are steadily decreasing. The budget estimate for 1934-35 on this head is Rs. 1,23 lakhs ; and this would probably be further reduced by interest conversion in respect of the loans taken from the Government of India and the Bombay Government between 1920 and 1925 (Rs. 200 lakhs at 6½ per cent. free of income tax, Rs. 1,60 lakhs at 6 per cent. and 50 lakhs at 5¾ per cent.). The Chairman presents the position in the most telling way when he says that "even if the Trust has to borrow Rs. 10

lakhs a year for the next 10 years to finance capital works, the debt charges will, nevertheless, decrease from year to year and will not be more than Rs. 1,15 lakhs in 1941 and 1942." So far as the estimates of the present budget are concerned, it may be mentioned that the revised estimates for 1933-34 show a small surplus of Rs. 27,000 and that the budget year is expected to leave a surplus of Rs. 45,000.

The G.I.P. Railway, too, has done its part in reviving Bombay's dying trade in cotton. The authorities have announced lower rates of freight for cotton despatched to Bombay and these rates are dependent on the abolition of the Town duty and a reduction in the Port charges and will come into force from April 1. It has been already pointed out that the Port Trust has declared its readiness to reduce the wharfage and Port Trust raliway freights. The G. I.P. expects to make up the loss in rates by the expansion in trade. The area served by the G. I. P. Railway is, it would appear, capable of expanding its cotton acreage. Akola and Amraoti alone can supply $1\frac{1}{2}$ million bales between them. And as things are, the rates are estimated to affect only about a million bales of cotton. To minimise the attractions of rival ports as outlets for the export of cotton from this area, the G. I. P. has also provided facilities for the direct shipment of cotton. While formerly cotton used to be brought to this city and stored up before it was exported abroad, and thus involved a number of incidental charges, the Railway has now thought it possible to make arrangements by which the transit of the cotton from the cotton growing centre to a particular ship in Bombay would be guaranteed by the Railway. However tangible the advantage of the inland system might be, there is no doubt that it will take time before the interests concerned can learn to avail of it. Publicity has a large role to play in this ; and if the Railway would resort to every means of popularising the new system, there is no doubt that the courage and enterprise it has shown will be amply rewarded by a marked

expansion of the movement of cotton through Bombay.

Government, too, have taken the first move towards the abolition of the Town duty on cotton. A bill designed to this end has been published in the form of an amendment to the Bombay Municipal Act 1888. The statement of objects and reasons says:

> "It is considered necessary to abolish, with effect from April 1, 1934, the Town-duty which is being levied under section 195A of the City of Bombay Municipal Act, 1888, on raw cotton imported into the City of Bombay, since the passing of the Bombay Municipal and Improvement (Amendment) Act, 1920. The reasons for the proposed abolition of the duty are:
>
> Firstly, this duty assists the increasing diversion from the City of Bombay of the trade in the export of raw cotton:
>
> Secondly, in view of the pevailing low prices of raw cotton it is desirable, in the interests of the grower, to remove as far as possible every hindrance to the demand for Indian cottons.

The strike situation in Sholapur has assumed an increasingly grim aspect. While Government and employers are availing of every opportunity to inveigh against the mischievous agitators from outside, the strike has been spreading fast, more mills are drawn into its vortex and the attendance of mill workers in all factories is falling day by day to a yet lower level. The latest figure available puts the percentage of attendance at about 24. About the merits of the case between labour and industry in Sholapur, it is dangerous to be dogmatic. Nor even can one be certain as to the part played respectively by the Government, the employers and the labour leaders. There are charges against one and all. Government have been accused of siding themselves with the employers and utilising the ordinary provisions of the criminal law to prevent labourers from aggregating together and deciding on a course of action or otherwise strengthening their hands. Against labour it is said, picketing has never been peaceful, that intimidation has been freely resorted to, that there are at least one or two instances of incendiarism to their discredit and that, on the whole, the fight for the standard of life has not been a clean one. As for the labour leaders, they come in for a full share of the abuse as heartless promoters of mischief, being blind to all considerations of justice or prudence. Cases of violence have been reported; and it is interesting that while the *Times of India* reported causalities of over a 100, the official report of the District Magistrate definitely refers to such accounts as baseless exaggerations. Thus, even on questions like these, there is considerable disagreement; and it is futile to attempt to form definite conclusions about the merits of the case. It may be mentioned, however, for what it is worth, that a public meting, in which men like Mr. K. F. Nariman and Mr. Brelvi were present, condemned the action of the employers and of the Government and accorded its support to the demands of labour in Sholapur as being in consonance with justice.

The Legislative Council, too, had a day's debate on this question. Accusations of partiality were freely hurled at the Government. The Home Member was obliged to put in an elaborate defence and to assert that all that the Government tried to do was "to keep the ring clear for the combatants." Mr. Bakhale, as usual, suggested that the Government, should implement and give effect to the recommendations of the Labour Commission and set up a full-time Member for Labour, with an adequate staff, which will gather all relevant information and be in a position, when the time comes, to adjudicate between rival claims. Mr. Bakhale clearly raised a too inconveniently fundamental question; and it was all that the Home Member could do to effect his escape by putting forth the handy excuse of paucity of funds, though he murmured at the same time that Government cannot venture on such perilous paths.

Gold worth Rs. 1,55,33,276 was exported from Bombay for foreign countries during the week ending March 10. The P. and O. mail steamer, "Rawalpindi", which sailed from Bombay for London on Saturday afternoon carried gold worth Rs. 93,40,705. Of this, gold worth Rs. 88,868 was for New York, option London; Gold worth Rs. 35,635 for Amsterdam, option London or Paris; Gold worth Rs. 52,26,139, for London, option Amsterdam, Paris or New York and the rest for London.

The s.s. "President Hayes," which left Bombay harbour for New York on Friday carried gold worth Rs. 61,92,571 (for New York).

The total value of gold exported from Bombay for foreign countries since Great Britain went off the gold standard now amounts to Rs. 1,73,26,68,582.

SECOND THOUGHTS ON THE BUDGET

By G. L. M.

The first thoughts on the Central Government's recent Budget found expression in the leading articles of the papers the next day, in the inevitable interviews, in special supplements and enlarged issues, in criticism in the Assembly, in outbursts in the Provinces. It is time, therefore, to collect the second thoughts on this Budget of Sir George Schuster, which is his last, but not his least.

The Budget has been balanced. These few plain words sum up the story of a nation's financial emancipation. The glad news that Sir George had shown a slight surplus flashed across the whole country. It filled everyone with joy. Clark bowled a slow ball not aimed at the head of the batsman so that the batsman could play at least one ball with safety. Jail warders told the "political" prisoners what had happened and allowed them to go on one day's voluntary hunger-strike to celebrate the happy event without insisting on forcible feeding. Nobody snored in the Assembly or in the Councils that day. The surcharge on income-tax appeared attractive. The rural areas felt uplifted and the faces of the agriculturists were beaming. Even the unemployed ceased to tramp the streets for a day in search of a job in order to bring a little brightness into the life of the nation whose Budget had been balanced.

Financial authorities assure the country that it is now definitely in a position to pay its way. Not merely that Sir George Schuster is able to pay *his* way. Nor even that the *Government of India* are able to pay *their* way by increasing old and imposing fresh taxes, by raiding Sinking Fund and by manipulating the Depreciation Fund and by juggling with the Public Debt. But the country is paying its way. My neighbour who is harrassed by the *durwan* of the rent-collector told him plainly: "Don't trouble me. I have transferred rent charges to capital instead of revenue expenditure and am not going to pay it now. The surplus Budget clearly shows that I am paying my way. The country is doing it and I am a part of the country. Sir George Schuster says it; and how can you doubt his word?" From every home where there is a deficit budget each month, because figures cannot be juggled and windfalls cannot be expected, a shout of joy goes out that the nation at least has got a surplus Budget. For the nation does not live in homes and cottages and huts where there is penury and hunger.

* * *

Puzzled by this dilemma of a surplus in the midst of deficit, sumptuary allowances in the midst of starvation, I turned to the Financial Authority for an explanation. "How is it," I enquired, "that the period of trade slump and fall in prices corresponds with additional taxation and restoration of cuts in salaries of the most highly paid Services in the world?"

"The explanation", he said, "is very simple. Industries are thriving in this country more than they should. Government can welcome this only if they are in non-Indian hands. But take sugar".

I took it. It tasted sweet.

He was, however, not satisfied. He continued, "Now take salt".

I took a pinch of salt but it was very saltish.

"On the other hand", said the great Authority, "take matches".

I took that also, but had to return the box after lighting a cigarette. This provided a link to continue the argument.

"Now take cigarettes and tobacco", he said.

I picked up both indigenous and imported brands.

However, when the Financial Authority wanted me to "take" not only cotton piecegoods but also hides which smelt rather badly and steel which was too heavy to carry, my patience was exhausted.

Suddenly a bright idea struck me. With a hopeful gesture, I asked, "But what about the duty on silver and gold exports?"

I was disappointed. The Authority did not ask me to take silver or gold.

Throughout this vast land on the morrow of the Budget, men asked one another to "take" sugar and salt, cotton and jute, linseed and groundnuts, hides and skins, matches and cigarettes.

* * *

The Authority changed the subject. "Which do you think is the Cinderella Province of India, Layman?"

"Assam", I hazarded, "because it is deprived of excise revenue on oil".

"Wrong. Try once more".

"Bengal," I ventured, "because it is deprived of the proceeds of jute export duty."

"Wrong. Try once again."

"Madras," I said almost in tears, "because its rice is threatened from Siam and Bangkok and unlike wheat or jute or cotton, its case is not heard."

"Wrong again. Have another guess."

"Punjab," I muttered sobbing, "because its wheat growers are not fairly treated."

"No. Can you still try?"

"Orissa and Sind are not yet separate Provinces and have not, therefore, reached the stage when they could claim the privilege of being Cinderella Provinces," I pleaded; "I do not know if you refer to Burma which wants to separate from, but maintain commercial relations with, India; or Bihar owing to the earthquake; or the Central Provinces whose Government cannot subscribe to the earthquake fund owing to poverty and is worried about Berar; or the North-West Frontier Province which probably wants an increased subvention from the Central Government or Ajmer Merwara where there are no tariffs against detenus. If you had said, which is the Oliver Twist, Province I would have said, all the Provinces because they all ask for more. But who, O Great Authority, who is the Cindrella Province of India?"

"Why do you forget that benighted Province of Bombay? Its development by Baron Lloyd at break-neck speed has made it barren but it also bears some grudge against New Delhi and now comes forward with a beggar's bowl. The Meston Settlement is the Aunt Sally of Indian public finance. Everybody can hit it. With so many Cinderellas competing to dance with the Prince of Finance and put their feet in the lost slipper of Prosperity, who can say that the future of India is not bright?

"When all are for a Section
And none is for the Nation
And while the poor go on starving
The Services ask for ration!"

OLYMPUS

(From Our Correspondent)

New Delhi, March 14.

The struggle for legislative preference has thrown the Budget temporarily into the background. Sir Joseph Bhore was anxious to have his Textile Bill referred to a Select Committee and Sir Harry Haig wanted to rush through his States Protection Bill. The former being a tariff measure got the better chance, and Sir Harry was told to wait till the Finance Bill is through.

* * *

Sir Thomas Ryan's death has lost the Assembly a precious day. This was willingly surrendered. Sir Thomas was neither a regular Member of the House nor one of its front-benchers. He did not have even the status of a Secretary to the Government. But he had won such universal esteem and affection that no one had the heart to say that the adjournment should not be for a full day. It was felt, no doubt, that such a precedent, might prove embarrasing in future; but on such occasions it is sentiment more than balanced views that prevails and every one was happy that the Assembly adjourned.

* * *

The death of Sir Thomas has really shocked every one. The least expected, it reminds me of a talk I had with him only last week. So full of life and looking fresh and young, I asked him why he was retiring and why was he depriving India of those gifts he had acquired through a varied administrative experience. Sir Thomas had great sympathy with India; and there was no occasion in his life when his Irish feelings were not with Indian ambitions. He replied that he would like very much to make India his home, but his family ties made it impossible for him to stay in this country. He agreed, however, that India was the poorer for every official who left her, just, when he was able to revert to it public life and enrich it. Little did we think that the end was so near.

* * *

Yesterday the Assembly met to discuss the Tariff (Textile) Protection Bill. The debate was entirely directed against the Mody-Lees Pact. Sir Joseph Bhore made one of his longest speeches. He spoke for an hour. It was, frankly, a laboured speech. There was no fire in it; no originality and not even the directness that Sir Joseph is able to impart to his brief speeches. The only occasion he warmed up was when he pleaded for a friendly gesture to Lancashire.

* * *

After that the attack was not on the "front benches" but on the coterie of the Independents who were shielding Mr. Mody. Mr. Mudaliar sat near the Bombay representative to cheer him up against the tirade poured against him by Mr. B. Das and Mr. Joshi. Mr. Mody's sense of humour too came to his rescue.

* * *

Briefly stated the *non-official mind disclosed* distrust of the Bombay millowners. There was a time when the millowners flitered with the Swarajists who ruled the Assembly. Then Government twitted them. Now they are on the side of the Government and now the non-officials distrust them!

* * *

If I were to say whose speech was the best I would unhesitatingly give the award in favour of Mr. Joshi. He put the issue so squarely that the House felt that the mill industry had a fairly big charge-sheet to answer. The millowners had failed to rationalise the industry; had ignored all that Tariff Boards and the Labour Commission said in favour of labour, had given no impetus to indigenous insurance business and had not attempted to develop Indian industries for stores—all because as Managing Agents, they were making money as agents for foeign insurance companies and foreign suppliers of stores.

* * *

Mr. Mody took an hour and twenty minutes to answer the charges. He is a clever advocate and avoided answering charges by making counter charges. He felt the agony of condemnation but was sure that history would pronounce him as the best friend of the "teeming millions." The only part of his speech which might have caused some sensation, he spoke only in suppressed tones and "code" language. It seems he has some evidence to show that the Japanese are trying to get over the fixed quota through certain devices. He has promised to let the Select Committee know it all. Sir Leslie Hudson proved the best friend or "Little Mody" as he is affectionately called by the European group. He backed his speech including his plea for change of tariff in respect of yarn and artificial silk piece-goods.

* * *

Mr. K. C. Neogy having secured a ruling from the President that by sending the Bill to the Select Committee the House will not be committed to the principle of preference but only to protection to textile and silk industries the Bill went to the Select Committee without protest. It was clear, however that the non-official opinion had withdrawn its love from the millowners and had bestowed it on the handloom weavers. There was only one voice—that of Mr. Maswood Ahmed—which demanded a cotton excise duty. I predict that this voice will grow, as years go by, and that it will not be long before the millowners come in for an excise duty.

* * *

It was only a year ago that the idea of an excise duty on sugar was mooted and then it was laughed at. To-day it is a settled fact. This brings me to the point that Sir George Schuster will have a tough task in defending his excise duties. The industrial interests are organizing a strong protest and they will get many spokesmen in the House to ventilate their point of view. The fact that the Punjab and U. P. Councils have condemned the central budget in this respect has given added impetus to the anti-excise movement.

* * *

The result is that for the first time this session Government whips are really active. They are going about canvassing support for the Finance Bill. It will not be right to prophesy that the Finance Member will offer a compromise—because he cannot offer any. His proposals will get through the House, but only after a very tough fight.

* * * *

The rate at which progress has been made hitherto does not hold out the prospect of conclusion of the session before the second week of April. Government Members were hoping that the Session would end by 6th April but it is now likely to last till the 15th. The Simla move has been provisionally fixed for the middle of April. The Finance Member is not likely to go up to Simla as he will be leaving India early in May. Whether the Japanese Delegation will go up to Simla is still a matter for speculaion. The Japanese fear they may have to. No one can explain the delay that is occuring in drafting the treaty. May be that the present Anglo-Japanese negotiations are causing this delay. It is freely mentioned here that the position of the British Government would be difficult if they sign a treaty of most-favoured nation treatment with Japan in connection with India and enter into a trade war with Japan in respect of other territories.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN

Mr. Eden's Tour: Shipping industry and Subsidies: The Anglo-Japanese Trade Talk Deadlock: Increased Railway Earnings:

Mr. Eden's Tour:

Mr. Eden has returned from his tour of the Continental Capitals and one eagerly awaits his report on the Disarmament situation in Europe. It would, perhaps, be safe to forecast that his optimism, if he carried any with him, was not greatly strengthened by the discussions he had at the European Capitals—especially at Berlin. Germany is reported to have put forward a plea for immediate disarmament of the air in direct contravention of one of the main provisions of the Versailles Treaty. Both Italy and Germany also prefer, it is reported, the six-year plan for a disarmament convention to the ten-year plan urged by Great Britain. Germany's recent pact with Poland is based more or less on the lines of the British proposal. But where the major Powers are concerned Germany is more wary and less conciliatory.

And while these endlessly futile conferences were going on, General Goering announced his plan for the compulsory air-training of all German boys and girls. The ostensible plea is to further the interests of "Air-Sport." Whether "Air-Sport" includes the "Sport of Kings," one cannot emphatically declare. But it should not be a matter for surprise if the German Air fleet proves more efficient at the next world war than it was at the last. It is true that Hitler in his public utterances openly denounces warfare between nations. "The Nazi Government representing the entire nation," he declared, "realises that it risks everything by want —only provoking war." But the peace that Germany —or any nation for that matter—desires or is likely to get is a sort of armed equilibrium which the least international complication will disturb ino a seething chaos.

Ships and Subsidies:

The shipping industry of Great Britain is passing through a difficult phase. The supremacy of the British Mercantile Marine has slowly, but surely, waned so that the very existence, in the future, of Britain's tramp shipping has become a real problem. The cry has, therefore, been raised for subsidies and protection. The Chamber of Shipping and the Liverpool Steamship Owners' Association have passed the following resolutions:—

> (a) That H. M. Government should intensify its activity with all possible despatch in the negotiation of new or revised treaties and trade agreements on the following lines:—
>
> Great Britain, in consultation with the Dominions, should join with other nations in an effort to restore world trade. This group should include all the great creditor nations and should agree the principles to be observed and concede most-favoured-nation terms only to each other. Among these principles should be an obligation on each creditor nation to accept such payment in goods and services as will offset its creditor position and on all co-operating nations an obligation to stabilise prices and currencies and to restore the freedom of the seas for peaceful commerce. Bilateral agreements should first be negotiated but should be framed, as far as possible, to lead naturally to the formation of a group of countries which are prepared to trade with one another on the agreed principles . . . . .
>
> (b) H. M. Goverment, after consultation with the Dominions, should announce:—
>
> (1) that Imperial preferences will be enjoyed only by goods imported in ships belonging to countries which give fair play to British exports and British shipping as indicated in (a) above; and
>
> (2) that pending the revival of trade and the effective operation of the above measures, subsidy will, where necessary, be met by subsidy. Accordingly, when any section of the British mercantile marine can show that a temporary ssbsidy is necessary and will ensure its preservation for the time, H. M. Government should favourably consider the granting of such a subsidy, taking care not to prejudice other sections of British shipping thereby.
>
> (c) In their desire to help the industry in a crisis H. M. Government should study and should prune the various burdens of taxation and regulation which have been laid upon British shipping over periods of prosperous trade.

Whether, industrially, tramp shipping has been a great success in England is a debatable question. But it is an undisputed fact that there was a time, not very long ago, when England depended largely on tramp ships for her food supply. In fact, the "Coal outwards, grain homewards" type of tramp steamer was almost a national characteristic of Great Britain. But to-day's state of affairs is altogether different.

The tramp shipowner has been the victim of circumstances over which he had hardly any control. But he must shoulder a certain amount of blame for not moving more rapidly with the times and for the lack of vision. Firstly, the falling-off in the coal export of England was a great blow to tramp shipping. The day when oil was proved more economical and efficient, as a motive power, than coal was an evil day, not only for the coal industry itself, but for tramp shipping which depended for profits mainly on the carriage of coal to non-coal-producing countries. Secondly, and this is where the tramp shipowner really has a grouse, tramp shipping has been the victim of subsidised foreign tonnage. Hence the cry to "meet subsidy by subsidy."

While a certain amount of protection is, perhaps, necessary to prevent tramp shipping from disappearing altogether, the Government should go very minutely into the question before going to the taxpayer for a subsidy. The tramp shipowner must be asked to put his house in order. The old coal-burning small tramp ship must go and first-class tonnage with the most economical and modrn machinery must be put into use. The fact that a very large portion of the carrying trade has passed slowly into the hands of Scandinavian tramp shipowners is ascribable to the superiority of their tonnage. The British tramp shipowner is open to the charge that he has clung desperately to the old type of coal-burning vessels of small tonnage when the dwindling state of world-trade should have made him try his best to retain his portion of the cargo-carrying trade by newer and more modern methods. Fresh routes might have been sought and faster and more efficient boats used instead of pressing obsolete tonnage into service. The growing "nationalism" of countries may require that the interests of the tramp ship should be protected against unfair competition. But the tramp shipowner must be asked to pull up his socks and not merely play on the sentiment of the nation in asking for help. "The Victory" had her uses at a crucial stage of England's history. But how long would England last if she had to depend on boats like the "Victory" for her modern naval supremacy? Similarly, the old tramp ship must go and make room for more modern, larger and swifter vessels of a tonnage an ocean liner would not disdain to possess.

The Anglo-Japanese Trade Talks:

This week has not seen any improvement in the deadlock at which the English and the Japanese cotton delegates had arrived, and as foreshadowed last week, there is every likelihood of the Conference breaking up over the "area" issue. Both sides are clinging rigidly to their views. The following official statement has been issued:—

> "A further meeting of the British and Japanese textile delegations was held at the Board of Trade. It was agreed at the end of the meeting to issue to the Press the following summaries of the position taken up by each delegation, which were prepared by the respective delegations.
>
> "The British delegation informed the Japanese delegation of their meeting earlier this week with the Special Committee in Manchester representing all sections of the trade. They had explained the course which the discussions had taken, and the committee, after full consideration, decided it was not possible to vary the

attitude of the British side in regard to the geographical scope of the discussions.

"They were still of opinion that only on a world basis could the discussions serve the purpose in view, namely, the restoration of stability in the world textile markets. Action within the British Commonwealth and home market would not have necessitated the calling of an Anglo-Japanese Conference.

"For the Japanese part it was made clear that they strongly maintained their attitude, but since it was impracticable, for reason already fully explained, to include the world markets, it would serve no useful purpose to discuss them. They expressed their strong opinion that it was a one-sided proposal to restrict only Japanese exports.

"They thought that the only practical basis which they could usefully discuss would be the markets of Great Britain and Colonies, where any agreement which might be come to could be actually put into practice.

"After further discussions of the two points of view, the Conference adjourned until Wednesday March 7."

When, one wonders, will nations really begin to co-operate with a view to further world trade and thus add to the sum of human happiness?

Increased Railway Earnings:

The general revival of trade is reflected in increased railway earnings. There was a handsome increase of £227,000 in the "Home Railway" traffics for the last week in February. The previous best was £208,000 in the second week of January. Railway stocks have also risen substantially in the market.

Railway revenues fluctuate with such alarming suddenness, that it would, perhaps, be rash to draw very optimistic conclusions from these figures. But it can hardly be gainsaid that England has left the worst period of depression and slump behind her. Sir Robert Horne, presiding at the Great Western meeting, voiced his cautious optimism regarding the future. "We must take a cautious and modest attitude" said Sir Robert, "towards our prospects. But given a freedom from strife among the nations, and some advance towards restoration in America, we may go forward with more hope than we have had in our hearts for some years past."

UNITED STATES OF AMERICA

Roosevelt vs. *Industrialists*: *The Stock Exchange Control Bill*:

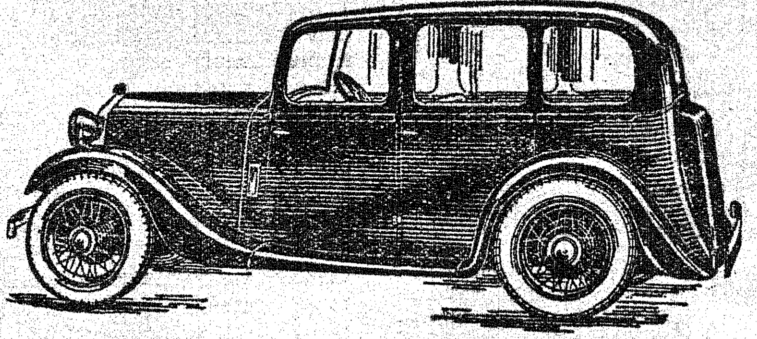
The events of the week, though not of a startling nature, as one has come, almost, to expect from America, were nevertheless suggestive of great changes and upheavals in the future. The all-conquering career of Mr. Reosevelt has met with the first serious obstacle and he is thrown on the defensive and is even thinking of compromise.

This is the result, not of one or two isolated incidents, but the cumulative effect of the President's entire policy which he has been pushing forward with such remarkable dash, integrity and courage. From the end of November began Mr. Roosevelt's ruthless experiment of "putting the house in order", and a fresh drive almost every day has swollen the ranks of the Opposition until, now, it has taken formidable proportions.

The last, but by no means the least, recruit to the Opposition camp is the Industrialist. Anyone who has read Mr. Roosevelt's published writings knows that he is pledged to guard agricultural interests against industrial intersts. But what the industrialist had not looked for was an attack on the industrial codes. The National Recovery authorities want to increase the influence of labour in the administration of the codes and when, over and above this, Mr. Roosevelt is rushing a bill through the Houses granting him more absolute powers to negotiate trade agreements with foreign countries, the industrialists, who have so long depended on protection for their profits, are naturally alarmed.

It remains to be seen whether a better state of affairs emerges from this struggle between Mr.

THE
WOLSELEY HORNET



The fame of the Wolseley "Hornet" has spread throughout the world, and this new 1934 model marks another great advance in the 12 h.-p. six-cylinder class. The specifications include a host of special features, prominent among which are the underslung compound frame, four-speed synchromesh gearbox with "Silent third," and controlled free wheeling of the well-tried and successful Wolseley type. We shall be pleased to forward specifications and arrange demonstrations.

Air Mail Week

Roosevelt and the industrialists. But, for the time being, there is great nervousness in the market and the steady progress of America towards recovery has been arrested.

The Stock Exchange Control Bill.

The disgruntled industrialists have thrown in their weight with the opposers of Mr. Roosevelt's Exchange Control Bill. It is generally believed that Mr. Roosevelt is prepared to compromise in the matter of the Exchange Control Bill provisions to enforce his demands in other matters such as trade negotiation powers with foreign countries referred to above. Mr. Roosevelt has so far maintained a non-commital attitude which has filled some with hope and others with alarm. It is said, however, that the authorities are far from convinced with Mr. Whitney's presentation of the Stock Exchange case and it is even rumoured that the President of the New York Stock Exchange will have to go. But there is no doubt that the inauguration of State control over the exchange will be opposed tooth and nail, especially now that the industrialists have joined the ranks of the malcontents.

One wonders if Mr. Roosevelt is slipping from the high position he has held as the nation's idol. Some of his recent actions have been precipitate, if not unwise. The cancellation of the Air-mail contracts followed by the death of five pilots within a few days could hardly have helped to increase his popularity. Even Lindburg, who comes a close second to Roosevelt in a race for popularity, delivered a sharp rebuke over this air-mail affair. Mr. Roosevelt is now realising that if he cannot sail with the wind of public opinion, he should at least not flout it wantonly and needlessly. To be sure, Mr. Roosevelt has not only courage but sagacity, not only pugnacity but prudence.

FRANCE

BALANCED BUDGET & TRADE NEGOTIATIONS

The steady drain of French gold to America consequent on President Roosevelt's revaluation of the dollar, and, in part, on the political disturbances also, is best reflected in the returns of the Bank of France. That lack of confidence of the public in the Government has been responsible in the main for the hoarding of funds, which has, of late, become very widespread. A distinct note of deflation, which France is now passing through, was also hinted in reviews for previous weeks. The bank returns, forming, as they do, an index to these features in the national economy, therefore, make an interesting reading.

	millions of francs Feb. 17 1933	 Jan. 19 1934	 Feb. 16, 1934
Gold reserve ...	81,320	77,161	74,435
Foreign balances ...	4,142	911	888
Bills on France ...	2,589	3,921	5,414
Circulation ...	83,873	79,694	81,087
Private deposits ...	18,608	15,151	12,568
Total sight liabilities	104,700	97,224	95,865
Cover	77.67%	79.33%	77.65%

From the above table it will be noted that there has been a progressive shrinkage under Foreign balances, gold reserves, Private Deposits and note circulation. This fall in the circulation of notes has its effects on the French Treasury which has come to feel the strain in its rediscounting facilities; for the tighter money becomes, the more difficult it is for Treasury bills to be renewed. Though the position of the franc is technically as solid as ever, being covered as it is with double the minimum prescribed, so that the new deflationary policy would be unnecessary, the hoarding habit has removed a good portion of the available supplies of notes from active use, with the result that the market is feeling the effects of such withdrawal. In addition to the hoarding of notes, there has been hoarding of the precious metal, too. One of the statisticians estimates that out of a total of 75,500 million francs of gold imported into France from 1928 to 1933, only 50,000 million went to swell the Bank's reserves. The balance went into private hoards. It has, therefore, become necessary for the Government to stop this hoarding habit, if the Treasury is to function satisfactorily with its operations. By constantly raising the rates of loans, the Treasury may succeed in securing a few millions now and then. But a more effective method is now necessary.

The Doumergue Ministry has set itself to balance the budget for the coming year. Arming itself with powers to effect economies by executive decree, the French budget for 1934-35 has been so framed as to yield a slight surplus. The total expenditure for 1934 shown in the bill under discussion in the legislature this week amounts to above Fr. 49,999 millions. Economies to be effected by decree amount to about 1,744 millions, leaving a net expenditure of 48,255 millions. As the estimated revenue is calculated at 48,314 millions, there is left a surplus of about 59 millions. In moving this bill in the Chamber, the Finance Minister admitted that to ensure a real equilibrium several milliards of francs must be obtained by economies and fiscal reforms. He is also reported to have pledged himself before the Senate to accomplish within ten days economies to the extent of 600 million francs. M. Germain Martin hopes that by reducing the rate of taxation and by broadening the basis of taxation, he would be able to acquire even more funds than are actually required for balancing the budget.

The discussions on the budget were also made use of to reaffirm France's faith in the gold standard and the existing parity levels. The Finance Minister is

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

reported to have referred to the campaign in the U. S. A. to persuade France to resort to devaluation of her currency and pointed out that he failed to see any advantage to either country from such a course. The view of the French Government was that devaluation would be of no benefit to the country; nor would it tend to improve international relations. The French slogan, therefore, continues to be "no inflation and no devaluation." Emphasis is also laid on the necessity of a balanced budget; and once the spectre of deficit budgets is laid, all classes would be at one in the wish that the nation would be spared the dangers of a managed currency.

It is therefore a matter for alround gratification that the Ministry has accomplished a task which is not only important by itself but is momentous in its significance to the currency and exchange. Though it will be some time before the condition of the Treasury can be considered thoroughly sound, the passage of the Budget should have its effects felt on the market. An appeal to the market for funds may be necessary; but this cannot detract from the importance of the balanced budget, as the cause of a new confidence in the markets.
